And first, a word to those who deny its reality or scoff at it as an idle fancy or vain delusion. With such, reason and facts avail little towards conviction; yet, if properly constituted, experience will sooner or later bring to them sweet or bitter proof. *Nemo me impune lacessit*. It was Voltaire, we believe, the sneering sceptic and unrivalled master of irony, with the sardonic, Mephistopheles grin—the impersonation and type of the hard, polished, disenchanting philosophy of the eighteenth century—who erected in his garden a statue of Cupid, and inscribed upon its base, “Whoever thou art, that approachest, do homage to him who either was, is, or shall be thy master!” Swift, the bitter, relentless contemner and satirist of humankind, who seemed actuated by a fiendish desire to strip our nature of its dignity and charm; who perversely scattered the feculence of a grovelling and disordered imagination upon beauty, delicacy and sentiment; even he, passed much of his life in the company of two amiable women, to whom he seemed bound by a singular infatuation, yet whose happiness he cruelly sacrificed by a conduct so utterly strange, if not selfish, as to defy all scrutiny into its cause. Pope, from his sympathy with Swift, his satire on women, his personal deformity, and the mocking pleasantry with which he generally alludes to the passion, would seem to have been a sceptic; and yet the fervor of his *Eloisa*, the lines to an unfortunate lady, and his devotion to Martha Blount, indicate that he too had a soft place in his heart, in spite of his admiration for the Epicurean philosophy, so exquisitely depicted in his character of Voiture.

Thus wisely careless, innocently gay,
Cheerful he played the trifle life away,
Till age at length his gentle breath suppress,
As smiling infants sport themselves to rest.

Notwithstanding his coarse habits and perverted sentiments, Rousseau was at times a grievous victim to the passion and power of love. It was not sensibility which he wanted—with which, on the contrary, his heart overflowed. A morbid imagination, unsettled principles, the propensities of an impassioned constitution, corrupted and defiled by early abandonment, degraded in him a nature gifted with the noblest and finest faculties. Poor man! broken in health and spirits; prematurely old through disease, misfortune and a singularly agitated life; the sport of passion and outcast of fortune; he, at the unsentimental age of forty-five, almost fainted by the road side, with love for a woman, who, he admits, was neither very young nor very handsome. No one can read his servid account of the feelings which overpowered him in his morning walk of miles, made expressly to entitle him to the customary salutation of a kiss from Madame d'Hondelet, without being convinced that the passion was deep in the “lake of his heart”—*nel lago del cuore*. Sobieski the Great, was the most uxorious and meanly compliant of husbands. The late viceroy Constantine, a man of so harsh and brutal a character, that common prudence compelled his family to substitute his younger brother in his place on the Muscovite throne, was softened and restrained only by his amiable consort, a Polish lady of delicate frame and feeble health. “*Teterrima causa belli*,” it may have been, which assembled the kings and chieftains of Greece upon the plains of Troy—yet how terrible in its consequences was the beauty of Helen, and with what fame it has filled the world! Ulysses the astute, and the pious Æneas, could not altogether defy the fascination of female charms; and to come down to a later period, the high Roman sacrificed for the sake of the Egyptian queen, “a world well lost.” Huge Samson laid his lion head upon the lap of Dalilah, and permitted the Philistian traitress—we had almost said—to spin from his poll the manly locks in which dwelt his strength.

'Twas love that brought upon his knees,
That hectoring kill-cow Hercules,
Transformed his leager-lion's skin
To a petticoat and made him spin;
Seiz'd on his club and made it dwindle
To a feeble distaff and a spindle.

But there is no occasion to refer to extraordinary personages, whether fabulous or real, for striking examples of the power of this passion over minds and tempers which would be deemed the least susceptible of its impression. We see every day, in ordinary life, the most singular transformations of character, and other surprising effects, produced in persons who would scarcely be supposed amenable to such a control. The hard lawyer, the greedy merchant, the bitter bigot, the frivolous man of the world, are all brought in turn and bound hand and foot at the shrine of Cupid. The strong man becomes weak; the passionate calm; the violent “roars you as gentle as a sucking dove;” the gay becomes sad; the melancholy cheerful; the sloven, an *arbiter elegantiarum*. Witness its effect upon a proud and beautiful young woman, too confident in her indif-

ference, as pictured by the delicate pencil of La Bruyere, whom we thus venture to translate: "There lived in Smyrna a very beautiful girl called Emire, who was even less known throughout the city, for her beauty, than from the severity of her manners and the indifference which she felt for all men, whom she beheld, as she declared, without peril, and without any other emotions than those which she entertained for her friends or for her brothers. She attached not the smallest credit to the extravagances which in all ages have been ascribed to love; and those which she had witnessed herself, she could not comprehend. She knew no passion but that of friendship. A young and charming person to whom she was indebted for this experience, had rendered it so agreeable to her, that her sole anxiety was to prolong it, and she could not imagine by what other sentiment the esteem and confidence with which she was so well satisfied, could be cooled and surpassed. She spoke of nothing but Euphrosine—it was the name of this young friend—and all Smyrna talked of nobody but of her and Euphrosine; their friendship passed into a proverb. Emire had two brothers, who were young, of great beauty, and with whom all the women of Smyrna were smitten; she loved them as a sister loves her brothers. There was a priest of Jupiter, who had access to her father's house, who was pleased with her, who ventured to declare himself, but received nothing but contempt. An old man, who, confiding in his birth and fortune, had the same audacity; met with a similar fate. She triumphed—and hitherto, it was only in the midst of her brothers, a priest and an old man, that she proclaimed herself insensible. It seemed that Heaven was resolved to expose her to stronger trials, which seemed but to render her more vain, and to confirm her reputation as a girl whom love could not touch. Of three lovers, who came successively captivated by her charms, and the depth of whose passion she did not fear to behold—the first, in a transport of feeling, plunged a dagger in his breast, at her feet—the second, overwhelmed by despair at not being listened to with favor, sought his death in the Cretan war—and the third died of languor and want of sleep. He who was to revenge them had not yet appeared. The old man, who had been so unfortunate in his attachment, had been cured of it by reflections upon his age and the character of the person whom he had sought to please. He asked her consent to continue to see her, and she permitted it. One day, he brought with him his son, who was young, of an agreeable countenance and elegant person. She saw him with interest, and as he was very silent in the presence of his father, she thought him rather dull, and wished that he had been blessed with more wit. He saw her alone, talked sufficiently, and with sprightliness; but as he looked at her but little, and spoke still less of her beauty, she was surprised, and indeed somewhat indignant, that so handsome and witty a person should be devoid of gallantry. She spoke of him to her friend, who desired to see him. He had eyes for Euphrosine alone—he told her that she was handsome—and Emire, who had been so indifferent, became jealous, perceived that Ctesiphon was sincere in what he said, and that he was not only gallant but tender. Thenceforward, she felt less at ease with her friend; she wished to see them together once more, to be convinced; and a second inter-

view taught her more than she wished to know, and changed her suspicions to certainty. She avoids Euphrosine—no longer finds in her the qualities which had charmed her—loses her taste for her conversation. She is fond of her no longer, and this change tells her that love has taken the place of friendship in her heart. Ctesiphon and Euphrosine see each other every day with increasing attachment; they think of marrying; they are actually married. The news spreads through the city, and it is proclaimed that two persons, at length, have experienced the happiness, so rare, of espousing the objects of their love. Emire hears it and is in despair. She feels the whole force of her passion; she visits Euphrosine, for the sole gratification of seeing Ctesiphon again; but this young man is still the lover of his wife, and finds a mistress in his charming bride; in Emire he recognizes only a person who is dear to her. The unfortunate girl loses her sleep and appetite; she becomes weak—her mind wanders—she takes her brother for Ctesiphon, and speaks to him as to a lover. She is undeceived, and blushes with shame; she soon falls into greater extravagances—ceases to blush for them—no longer, indeed, perceives them. Then she begins to fear men, but it is too late; for her mind is unseated; she has intervals of returning reason, which but add to her misery. The youth of Smyrna, who beheld her once so proud and insensible, confess that the gods have punished her too severely."

We have cited this remarkable extract, for the beauty of the picture and the delicacy of the style, rather than its justness, although we have met with an instance where love produced in a less degree, the effects so powerfully and touchingly described, in which, however, the disappointment proceeded from obstacles foreign to the parties interested. We do not think it possible, that such a passion could spring up and grow to such a head in the heart of a woman spontaneously and without the nourishment of a corresponding affection. Love rarely or never originates in the female breast, which is thus protected and strengthened by a wise law of nature. It must be the result of attentions and devotion, real or feigned—for woman is to be softened only by kindness, and her love always begins with sympathy; she is therefore said to yield, to be melted, to surrender.

But the most curious examples of the power of this passion, are exhibited by self mortifying puritans, whose very creed inculcates the eradication of all that is inviting in fancy or attractive in sentiment. Alas! the conventicle affords not a better protection than the chapel, and the nasal twang is sometimes constrained to break forth into amorous ditties. Poor Dr. Watts, of hymning celebrity, whose amiable character could not be hardened by the rigidity of his creed, was sorely exercised by the tender passion. The Rise and Progress of Religion in the Soul of Dr. Doddridge, did not altogether defend him from a weakness, the too ardent confession of which has somewhat scandalized his pious admirers. The devotion of Mrs. Hutchinson to "her Colonel" could not be excelled by the tenderness of the fairest lady of the polite court of Charles for her sighing cavalier. Women—

To whom the saints were so beholden—
Rubb'd down the teachers tir'd and spent
With holding forth for parliament.

The substitution of a *crop* for the *lovelocks* of the

gallant cavaliers, could not entirely cool the ardor of the roundheads. Tom Paine pitifully remarked, that if the quakers had had the making of the world, what a drab-colored creation it would have been. They might have clothed external nature in the sober livery of their sect, yet their hearts would not have been drab-colored. In spite of all these harsh and crabbed opinions and expedients, Nature will speak out and vindicate herself. One of the most loving faces we ever beheld, peeped forth from beneath the quaker bonnet. The young and dashing Count Segur was captivated by a fair quaker girl of New England, whose charms he has not failed to celebrate in the recollections of his age. "Marry for love alone, but see that thou love that which is lovely," was the pure, wise and tender precept, of the broad-brimmed founder of Pennsylvania.

It is vain to dispute, resist, or to resolve, we are all obnoxious to this irresistible power, whose sway every man, unless he be more or less than man, must acknowledge, at some period of his life. Be he soldier or scholar, ambitious politician, votary of pleasure, or slave of business, it matters not—sooner or later his heart is touched—his spirit is moved within him—and he loses the mastery of his affections. And when this eventful period has arrived, how altered are the thoughts of his mind and the sentiments of his heart! Perhaps he does not suspect what it is that possesses him—perhaps he resists with efforts which but entangle him the more. He wanders about, restless, uneasy, dissatisfied. He feels himself under a power which he can neither dislodge nor control. Like the stricken deer, he rushes on with the herd, or plunges in the deepest recesses of the thicket, in the vain search for relief. More generally, however, he swallows the potent drug with avidity, and yields himself a willing victim to the intoxicating draught. He no longer lives for himself alone; his existence becomes bi-partite or dual. An eye has met his which is gifted with a strange fascination; a voice has fallen upon his ear charged with the sweetest melody; which dwells in his memory as if it were ever heard, and is repeated in his dreams as though an angel discoursed unto him "most excellent music." And ah! with what untold delight does he not listen to the voice of the charmer! Then his heart acknowledges the truth of the sentiment—"A beautiful face is the fairest of spectacles, and the most exquisite harmony is the sound of the voice of her we love." Then every other passion, if not eradicated, is at least suspended. Ambition flings aside the sword and forgets the glittering vision of a sceptre: the cravings of avarice are hushed, avarice ceases to count its hoards, interest drops the quill and closes the ledger. There is but one feeling in the heart; there are but two persons in the world. Then frail, delicate woman, is gifted with a giant's power over the strong man. He trembles in her presence, and is withered by her frown. He does homage to her as to a divinity, and deems it even heroic to bow his strength to her weakness. Then it is happiness beyond compare, to be near her, to be in her presence, within the sound of her voice; to catch even the rustling of her robe, the echo of her footsteps, the shadow of her form. A flower which she has plucked, an object which she has touched, a lock of her hair, becomes a priceless treasure. He presses it in secret

to his heart, which swells, as it were, to embrace it. To be seated at her footstool, is a greater privilege than to press the golden cushions of a throne; to clasp her hand, a higher boon than to grasp a sceptre. Appetite fails; sleep deserts the couch which is no longer that of repose. A languor diffuses itself through his frame, which is more delicious than the energy of health and the vigor of action. The long night is too short to think of her; and when the dim outlines of objects are discerned through the casement, and the birds are heard to stir among the branches before their voices salute the dawn, the approach of day is welcomed, only that the eye may once more rest upon her and be happy. Then the mind is redolent of poetry; the heart fragrant with sentiment. Then the flowers exhale unwonted perfume—the air is balmy as that breathed by the life-giving winds of heaven. Then all nature is clothed with hues of unearthly brightness, and the common landscape is transformed into another garden of Eden. The trail of the serpent is no longer seen upon the flowers of paradise, and the universe smiles as though it had never been defaced by sin or depopulated by death, "beautiful in the uncultivated loveliness of gardens long run wild;" radiant with

- The purple light of love and bloom of young desires.

Then too, there is a charm in solitude never felt before, and which nothing but the presence of the loved one can surpass. To lie stretched for hours in dreamy contemplation, musing unutterable things; to wander in the silent fields, or pierce the deep recesses of the forest, while the mind glows with thoughts, and the heart thrills with emotions which lap the spirit in Elysium; "to outwatch the Bear" beneath the Chaldean canopy of stars, until the feelings are sometimes so overwrought that tears course down the manliest cheek; these are the delights of the solitary lover. The heart labors as though it were compressed within the bosom, or dissolves in tenderness. If sickness chase the rose from the cheek, or sadness dim the eye of the living idol, how deep is the sympathy awakened. Then is the force of genuine love increased tenfold. It seems as if there could be no higher pleasure in life, than to soothe her sufferings, to sympathize with her sorrow, to support her wounded spirit; that it were a privilege, indeed, to consecrate existence, in bearing or at least sharing the burden of her grief. Beauty is never so powerful, as when downcast and distressed. The flower is fairest when it begins to droop. The anger of the justly offended hero, in Samson Agonistes, almost vanishes, when the chorus, announcing the approach of the "bosom serpent" who had betrayed him, exclaims—

But now with head declined,
Like a fair flower surcharged with dew, she weeps,
And words addressed seem into tears dissolved,
Wetting the borders of her silken veil.

How touchingly does Milton describe his own reconciliation with his penitent wife, when he represents Adam moved to forgiveness by the resistless tears of our common mother.

She ended weeping; and her lowly plight
Immoveable till peace obtained from fault
Acknowledged and deplored, in Adam wrought
Commiseration; soon his heart relented,
Towards her, his life so late, and sole delight,

Now at his feet submissive in distress;
 Creature so fair his reconciliation seeking,
 His counsel, whom she had displeased, his aid:
 As one disarmed, his anger all he lost;
 And thus with peaceful words upraised her soon.

There is indeed much power in the tear of woman, and she knows it well. Shakspeare calls it "woman's weapon." The poets when they wish to give the highest charm to beauty, describe it as pensive, languid, touching, drooping, tearful. "Downcast and beautiful those eyes."

She looked as if she sat at Eden's door,
 And wept for those who could return no more.

Or let the fair one beautifully cry,
 In Magdalen's loose hair and lifted eye.

How moving is this picture in Milton's affecting sonnet on his deceased wife, the one whom he seems to have loved with deep tenderness, only interrupted by her early death!

Methought I saw my late espoused saint,
 Brought to me, like Alceas from the grave,
 Whom Jove's great son to her glad husband gave,
 Rescued from death by force, though pale and faint.

The painters, too, have shown the same instinctive sentiment in the choice of their subjects. Esther pleading with Ahasuerus for her kindred and people; the Jewish women bewailing the massacre of the innocents; Ruth the Moabitess, a desolate gleaner in the field of Boaz; Jeptha's daughter, the Iphigenia of the Bible, preparing to submit with filial piety to the cruel vow of her agonized parent; Rachel weeping for her children and refusing to be comforted because they are not; these and other kindred personages have ever been the favorite subjects of the pencil. What is it that renders the Beatrice Cenci so beautiful, but the pale sadness which is diffused over the delicate features of the doomed maiden? Cleopatra is always represented at the moment, when the asp is fastening his deadly fangs in her lovely bosom. Why do we gaze with such deep emotion upon the "Niobe, all tears," but from our sympathy with the maternal anguish, which agonizes without disfiguring her beautiful face?

The most remarkable examples of connubial devotion have been manifested in cases where its object was delicate and suffering. Almost the only tender remark to be found in the writings of Swift, is one in a letter to St. John, where, alluding to the afflictions of lady Bolingbroke, he touchingly remarks, as if to soothe or console his friend, that it is ever the fate of the most estimable women to be martyrs to suffering. Indeed, we go farther, and assert, that much of the charm and influence of woman is owing to her weakness and dependance—her "fine defects of nature;" without which she would scarcely awaken sympathy or inspire tenderness, as is observed in those of a bold and masculine character. Perhaps the constant care and solace which delicate and suffering persons require, maintain those habits of attention and devotion, which nourish and preserve affliction, as well in those who render, as in those who receive them. "We love those to whom we do good," is a maxim equally old and just. Thus, by a kind disposition of Providence, has strength been founded upon weakness, and evil been transmuted to good.

Let other bards of angels sing,
 Bright suns without a spot,
 But thou art no such perfect thing,
 Rejoice that thou art not.

Such if thou wert in all men's view,
 An universal show,
 What would my fancy have to do?
 My feelings to bestow?

Selfish the passion of love is not, whatever shallow observers may assert. It is on the contrary, at least in noble natures, a generous devotion, which finds its highest delight in the sacrifice of convenience, pleasure, interest; in a word, of self. It is La Rochefoucault, we believe, who says, that the reason why lovers are never tedious to each other, is that their conversation is always about themselves. This sentence like most of those of the French philosopher, is rather pointed than just. The true explanation is found in the deep interest and ardent attachment which are mutually felt. One of the most pleasing and generous effects of love, is its adoption of the ties of nature. It embraces the whole kindred of the person loved—parent, sister, brother—with the tender attachment inspired by natural affection. Perhaps there is no better test of genuine love, than is this drawing which is felt towards all those who are connected with its object. It is a new birth and adoption into the family fold.

Those, too, who would confound it with merely sensual feeling, forget that one of its most marked effects, is the reformation and purification of him who is brought under its influence. To him every thing gross, becomes revolting; every idea which degrades woman, painful and intolerable. A high respect, a reverential regard, is, indeed, the very essence and foundation of love. It is a passion which has made almost as many conversions as religion. It is, in fact, a religion of the heart. It fills the soul with pure desires, and inspires the mind with elevated aspirations. The lover is fired by a noble ambition, to render himself worthy of her whom he delights to regard, as all purity, goodness and truth. He seeks after "whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report." With what regret, nay remorse, does he not look back, even upon the venial and natural errors of his past life.

And with a heart repentant of all crimes,
 Pardon he asks for youth, ten thousand times.

He is deeply penitent, and anxious to consecrate the future to holier thoughts and nobler pursuits.

And not in vain, when thoughts are cast
 Upon the irrevocable past,
 The penitent sincere,
 May for a worthier future sigh,
 While trickles from his downcast eye,
 No unavailing tear.

Of this effect of love Petrarch is a noble example. Poet, scholar, philosopher, statesman, he is proud to proclaim that his turning from the paths of sin and folly to the steep ascent of virtue and of piety, was the consequence of his love for the saintly Laura. Fervently though he admires her person, his passion is excelled by respect for her purity and reverence for her character. While celebrating her charms with all the warmth of passion and enthusiasm of love, he yet constantly reverts to her spotless sanctity, and unbending severity of virtue. To his enraptured eyes, she is more than woman. Though clothed in fleshly apparel, she is a spirit sent from on high to guard and guide his erring steps; to throw a sanctified influence upon his path;

to lure him upwards, and beckon him with rapt eye and heavenward finger, to the abodes of celestial bliss. Here earthly passion mingles with love divine, and is spiritualized and exalted into something of a heavenly nature. How superior is this holy enthusiasm to the fervor of mere passion, and the sentimental extravagances of romance. The one is the pure and steady light of a star in the firmament; the other, the lurid glare and evanescent flash of a meteor across the heavens. This quickly goes out in vapor and darkness; that "shineth more and more unto the perfect day." It is not a little strange that the two noblest examples of love upon record, should be presented by a people who are generally more remarkable for the warmth than the delicacy of their sentiments. But superior natures belong to no clime, country, or nation. The fiery and indomitable spirit of the poet of the "Inferno" melted and bowed down before the image of the beatified Beatrice. He never alludes to her but in a strain of mingled tenderness and awe. He clothes her with a grave and majestic air, a certain religious austerity, at the same time that he describes her melting with tenderness for the lover of her youth. Though transfigured and crowned with stars, she has not forgotten, amid the glories of Heaven, her earthly sympathies and attachment; she watches over him as his guardian angel in the skies, and pleads for him at the footstool of grace, with the earnestness of unutterable love. How radiant the sainted woman shines in his immortal verse:

Donna mi chiamò beata e bella,
Tal che di comandar io la richiesi.
Lucevan gli occhi più che la stella:
E coninciommi a dir soave e piano
Con angelica voce in sua favella.

"A lady called unto me, beautiful and blessed; such that I besought her to command me. Her eyes glittered brighter than the star, and she began to speak softly, melodiously, with an angelical voice." Ah! and it is the voice of an angel alone that should utter such a strain, which falls upon the ravished ear as it were an echo of heavenly harpings. Thus spiritualized and exalted, love is purified from the dross of earth, and rises far above the weakness of humanity. What a difference between these high and holy emotions, and the gross, animal feelings of low and grovelling natures. Who having once tasted of such pure and celestial nourishment, can stoop again to the garbage of vulgar appetites? But it is only high and spiritual natures, that are susceptible of this exalted passion. These pure and sublime sentiments vindicate the high origin and destiny of man, and assert his kindredship with beings of a superior order. Transient though they may be, and subject to partial disappointment upon earth, it is our hope and trust that they point and tend to another sphere of existence, where they are destined to find a full and lasting fruition, unstained by the soil of earth, unchecked by the bonds of mortality.

He spake of love, such love as spirits feel
In worlds whose course is equable and pure;
No fears to beat away—no strife to heal—
The past unweighed for and the future sure;
Spoke of heroic arts in graver mood
Revived, with finer harmony pursued.

Of all that is most beautiful, imaged there
In happier beauty; more pellucid streams,
An ampler ether, & diviner air,
And fields invested with purpureal gleams;
Climes which the sun, who sheds the brightest day
Earth knows, is all unworthy to survey.

And if we cultivate our faith in this ennobling belief, and strive to elevate our souls to this pure and high standard of sentiment, we can do much to heighten, dignify and preserve the enjoyments of earthly love. Passion should not be limited to the person, which, however beautiful and precious, is frail and subject to change and decay—but embrace also the spirit, whose worth is higher, and whose charms are enduring.

Look at the fate of summer flowers,
Which blow at day break, droop ere even song;
And grieved for their brief date, confess that ours
Measured by what we are and ought to be,
Measured by all that, trembling, we foresee,
Is not so long!

If human life do pass away,
Perishing yet more swiftly than the flower,
Whose frail existence is but of a day;
What space hath virgin's beauty to disclose
Her sweets and triumph o'er the breathing rose?
Not even an hour!

The deepest grove whose foliage hid
The happiest lovers Arcady might boast,
Could not the entrance of this thought forbid:
O be thou wise as they, soul-gifted maid!
Nor rate too high what must so quickly fade,
So soon be lost.

Then shall love teach some virtuous youth,
"To draw out of the object of his eyes,"
The while on thee they gaze in simple truth,
Hues more exalted, "a refined form,"
That dreads not age nor suffers from the worm,
And never dies.

We should never forget that this tenement of clay which we worship, however fair and bright, is but the transient dwelling of an immortal spirit, which is destined to triumph over the frailties and survive the wreck of humanity. Let this idea be ever present, and it will confer a nobility and duration upon human affection, which nothing else can supply. It cannot fail to inspire a mutual reverence, which will render love sacred, and protect it from those damps and misgivings, that degradation and decay, to which it might otherwise be exposed from the weakness and variableness of human nature. But language cannot do justice to this part of our subject, which must be left for its best elucidation to those

Mute strains from worlds beyond the skies,
Through the pure light of female eyes,
Their sanctity revealing.

GRIEF.

In deep grief, we wholly forget what experience has taught every one—that all things and circumstances must be modified or changed by time. And in our state of drunkenness from the cup of affliction, we imagine that our present condition must be eternal, unchangeable, and ever the same. It is wonderful how quickly dejection—a state in which we view all things as clothed with the blackness of darkness, sometimes follows after joyfulness—a state in which we view all things as wrapt with a mantle of light. One dark or rosy idea, has the power of thus tinging with its own hue, the whole universe of things.

Williamsburg, Va.

G.

AMATOR LOQUITUR.

Queen of the quiet night!
 Where roams my absent love?
 Drinks she with me delight,
 Beneath thee, as we rove?
 She's far, she's far away,—
 Where roams she! Say, oh say?
 Zephyr! thy silken wing
 One little moment fold:
 Say—to her wilt thou sing
 What now thou'rt told?
 Then speed thee hence, and say
 "He thinks of thee, though far away!"

Star of the dewy eve!
 Does not her heart, like mine,
 Though far apart, receive
 Thine influence divine?
 Stay, sparkling planet, stay!
 Shine o'er the wanderer's way!

I look upon the streams
 Of my loved native river,
 And, as the moon's soft beams
 Upon its bosom quiver,
 I ask them, as they're playing,
 "Where is the dear one straying?"

Bend hither, gentle cloud!
 Flit not so swiftly past!
 Come from yon fleecy crowd,
 Flying away so fast!
 Thou wilt the wanderer see;
 Oh! tell her to think of me!

J. F. G.

LETTERS FROM NEW YORK.

NO. II.

Boston has been termed the "Literary Emporium." This title is said to have been bestowed by Edmund Kean, the tragedian. Not to disparage so distinguished an authority, I must express my ignorance of the peculiar claims which the capital of New England has to so enviable an appellation. Within the last score of years, she has sent forth but few original works, and those few,—with the exceptions of Prescott's "Ferdinand and Isabella" and such collections as Channing's Discourses and Webster's and Everett's Speeches, and Sparks's Writings of Washington,—have not produced any great impression throughout the country. New York and Philadelphia have, within the same period of time, poured forth volumes after volumes of original and edited works, which have elevated the standard of our literature, been republished in England, and removed from us the reproach of being a mere nation of tradesmen. The foolish question of "Who reads an American book?" is now no longer asked, and there are free communion and correspondence between literati on both sides of the Atlantic. It is, by no means, my intention to enter into the general subject of the progress of literature in the United States, (although that

would be a grand theme for any one, who had the information and the ability requisite for its proper treatment,) but I have made these remarks simply to introduce, to the many intelligent readers of the Messenger, some account of what is now doing in the literary world of New York, and of that publishing house, which rightly enjoys a higher distinction than any other in the country, from the character of its partners as well as on account of the extent and importance of its operations. I allude, of course, to Harper and Brothers.

This firm comprises four partners—brothers. Their names are James, John, Joseph and Fletcher. James and John commenced business, as printers in a small establishment in Dover street, twenty-three years ago. The first book which they published and in which the imprint appeared, "J. & J. Harper," was Locke's "Essay on the Human Understanding." This was successful—and its name and success afforded a happy prognostic of their future career; for, since the publication of that celebrated philosophical treatise, they have made many successful essays on the human understanding. The brothers are, at present, (to use a good Americanism) located in Cliff street. Upon the building, which they occupy, appears the same sign, which was placed there thirteen years ago, "J. & J. Harper's printing office." Shortly previous to their removal to this place, Joseph was received into the firm, and about one year afterwards, Fletcher, the youngest, became a co-partner. Thus united by the bands of interest as well as the stronger ties of fraternal affection, these four men present to the world an admirable illustration of the truth of the moral drawn from the fable of the bundle of rods. They have never separated, never dissevered their concerns, but have remained firmly bound and united together. Accordingly their prosperity has been large and constant. They are all married men and have, each, "sons and daughters." Their father, "the old man, is yet alive." I saw him the other day, a fine, bluff, hale, hearty, ruddy-cheeked farmer, who has outlived the allotted span of "three-score years and ten," yet has he not known a day of that "labor and sorrow," which the scriptures speak of as the doom of age. I talked with him about the country and the crops, and, hearing every word that I uttered as distinctly as I heard his, he told me stories about by-gone times, and, in ready answer to my questions, related instances of the mutations of our human affairs. It was truly an interesting spectacle to behold the good, old gentleman,—standing like a sturdy oak, strengthened by the storms of eighty winters,—in the midst of his men-children—whose children's children may, as I warmly hope,

"Make smooth the pillow of his final rest."

To convey a striking idea of the manner in which the brothers ("the boys," as their father calls them,) live together, I need only mention, that as long as they have been in business, and notwithstanding the difference of expense of each one, according to his mode of life or the size of his family,—they have never kept any separate accounts or had any settlement with regard to monies drawn from the house for their separate support.

The sheet, which they publish annually, and which is called their "Trade List," will show you the vast

number of their current publications, both standard and occasional. I send it herewith; but you must bear in mind that they have issued hundreds and hundreds of transitory books, which are at present entirely "out of print." They sometimes get letters from the West Indies and other distant ports—where the last Waverley novel still forms a topic of conversation—for some work, which was published by them many years ago, and of which no vestige remains; except, perchance, a thumbed, worn, dilapidated copy in the nook of some out-of-the-way circulating library. Had either of them taken care to preserve a copy of each of their publications, he would have possessed a curious library, in strange and various styles of typography. What book, among all, ever published by "the Harpers," think you, most sagacious Messenger, had the largest sale? You will hardly guess it. "ABERCROMBIE ON THE INTELLECTUAL POWERS." It is a volume of the Family Library, and its sale, to this date, has exceeded twenty thousand copies. The other volumes in this valuable collection have sold "excellent well," varying from seven to twelve thousand copies each. There are eighty-five volumes in the series. Bulwer's novels come next in the order of sale. Of the "half-dollar edition" of *Rienzi* (incredibly cheap!) fifteen thousand copies were sold. Among American writers (strange as it may appear!) Paulding's works have commanded the widest circulation. A different idea from this is probably entertained by those persons who chuckled over Mr. Willis's late slashing review in the *Corsair*; which, by the by, I regretted to see transferred to your pages, although you also gave the antidote administered to the public by the *Courier and Enquirer*.—*such as it was!* Mr. Willis's statements were untrue. Mr. Paulding is popular and his books *do* sell. Moreover, they were never sent to the editors of the *Corsair* for their commendation, as was intimated: at least they were never sent by the publishers. The cause of Mr. Willis's attack was a "secret grief," "a silent sorrow." You must know that he is quite a "*preux chevalier*," a gentleman who is extremely punctilious with regard to matters of personal attention and *etiquette*. He would probably be less disturbed by the most desolating criticism of his poems than by the least personal disrespect. When Mr. Willis was ruralizing with his *then* coadjutor, General Morris, on the romantic banks of the Hudson, Paulding was in the vicinity at the house of his relation, Hon. Gouverneur Kemble. Willis was never called upon by the Kembles or invited to their festivities, and he attributed the slight to the influence of Paulding. "*Hinc illæ lachrymæ!*" The critic gave out that he was incited to his severity by the fact of Paulding's having abused his early productions in the *Courier and Enquirer*; but the least inquiry would have satisfied him upon that point; for Col. Webb is not the man to have hesitated, a single instant, to declare himself the real author of all the pasquinades, which had appeared in his journal, about Mr. N. P. Willis.

I have fallen into this digression purposely to make known the true issue in the case of Willis vs. Paulding; but now *revenons à nos moutons*. I should have used the expression American novelists, not writers, in speaking of Paulding; for none of his productions can have been sold to the extent of Stephens' "Incidents of

Travel," or Miss Sedgwick's domestic tales "The Rich Poor Man and the Poor Rich Man," "Live and let Live," &c. It is not difficult to account for the extraordinary success of "Incidents of Travel in Egypt, Arabia Petrea and the Holy Land." Just after its publication, Mr. J. S. Buckingham, arrived in New York and commenced his lectures. He drew ten thousand people together, and to his audiences he commended in high terms the work of Mr. John L. Stephens. This he also did in other parts of the country. The consequence was an unprecedented demand for the book and the furnishing of the author's pockets to the pretty amount of some five or six thousand dollars! Look, besides, at the sacred associations which these Travels suggested! They passed over the very scenes of the Bible; they told the old names, with which our ears had long been familiar; and our minds, as we dwelt upon them, were filled with a "dim, religious light," and a pleasant, solemn music, like that which floats under the arches of a vast cathedral. The second series, "Incidents of Travel in Greece, Turkey, Russia and Poland," was successful on the name of the first, but was far inferior. Besides being much less interesting, it lacks the quiet simplicity and perspicuous ease. The author of these works is now preparing for his mission to Guatemala—he is to be accompanied by Mr. Catherwood, of panoramic celebrity, who will take drawings of the famous ruins of the city of Palenque in South America, for the purpose of illustrating a work that Mr. Stephens proposes to write. Before Mr. Stephens shall have attained his "middle age," he will accumulate a competent fortune from his writings—an extraordinary fact in the history of American authorship, and the more remarkable when it is considered that he was not educated to literature.

I will now say a few words, though fewer than it deserves, about Harper's "School District Library." A more useful and valuable compilation of books of this kind in one published series was never made. It embraces history, voyages and travels, biography, natural history, the physical sciences, agriculture, manufactures, the arts, commerce, *belles lettres*, and the history and philosophy of education. The first series consisted of fifty volumes, and these were put up in a neat case, and sold for TWENTY DOLLARS! A second series is now in the press, which is to include, additionally, all of "Sparks's American Biography," to be sold at one half their original price. This is certainly "diffusing useful knowledge;" it is of itself sufficient to form an era in the history of learning. The Library is used in all the district schools of the "empire state," and is highly recommended by the late and present secretaries of state and commissioners of common schools, and by the late governor. As there is nothing sectional about it, nothing suited to one part of the country more than another, what could you do better than introduce the second series into the schools of the "Old Dominion?" With a few additions, such as a history of Virginia—but hold! I look at the list, and lo! there is already a "History of Virginia with engravings," and there is moreover, to commend the whole, a "life of Washington." It strikes me he was a Virginian! There is a life too of captain John Smith. Was not he a Virginian? One would think indeed that this Library had been compiled as much for your state as

for ours. Your board of education should look to it; nothing cheaper; nothing better could be universally introduced into your common schools.

Of equal though not of such general value as the "School District Library," is professor Anthon's "Series of Classical Works." These have, as I have been glad to observe, been discriminatingly and satisfactorily commended from time to time in the Southern Literary Messenger, as well as in the New York Review, the Knickerbocker, the Democratic Review, the New Yorker, the New York Mirror, and other periodicals of high repute. How vividly do I remember the toil and struggle with which, when a lad at school, I dug into the unilluminated text of the old editions, with their horrid marginal references, and impenetrable notes! I used to think it a sin, to peep into a translation for the solution of a knotty sentence—and, as for pretending to comprehend what I could translate, dear me! I never dreamed of such a thing. I should have devoured an English note or explanation with the avidity of a starved urchin; but no, the notes were in a barbarous latinity, ten times more difficult to get at than the text. Oh, the agony of my young spirit, when I carried up my weary, aching head and my detested task to the pedagogue, who, with ferule-tripod in hand, governed the waves of boyish tumult—and looked to me far more terrible than Virgil's Neptune. Pardon me this divergence a little farther still, my dear Messenger, while I describe my school-dictator in the verse of a poet, unknown to us—but who was in nature as he was in name a *Bird of song**—

"——The grandeur of his face
Was like the ancient Roman's, wisely stern;
He did not *teach*, but ordered us to *learn*!
In all the solemn labor of the school,
He thought, and looked, and moved, and spoke by rule,
And, as he shook his learned head, and cast
His eye around, that threatened as it past,
Each glance was measured, every shake so true,
That e'en the motion of his ponderous queue
Seemed like a formal pendulum of lead,
To time the mental clock-work of his head!
• • • • •
Such was the man, who, at my father's board
Dined twice a year, and, from his brain, ill-stored,
Quoted with pride—methinks I hear him speak—
Three scraps of barbarous Latin, four of Greek,
Which made my father stare, my mother sigh,
And wish her son just such a prodigy!"

Thanks to the progressive spirit of the age and the democratic principles of small boys, such pedagogues are now-a-days rarely seen; and thanks, a thousand times repeated, to the publishers and editor, who, by giving such books, as those in the Classical Series, have made the rough paths plain and the crooked paths straight to the tender and inexperienced feet of youthful students. Professor Anthon's editions should go into all seminaries and colleges. We ought to mention as an important companion to them "Leverett's Latin Lexicon;" for it is better than any heretofore published either in England or in this country. It is, as I learn from the *dicta* of scholars as well as from my own investigation, throughout strictly correct. You will be gratified to learn that Professor Anthon has in preparation and in the press a classical dictionary, intended to take the place of that very deficient one, translated from

* The late James Bird, an English poet.

Lemprière, which has been so long used in English schools.

The mention of a work in press reminds me of my intention to tell you something about the lighter, literary matters that are talked of just now. Your friend, professor Ingraham, has nearly ready a new novel called "The Quadron." A taking title—and doubtless, like his other romances, it will be replete with spirit-stirring incidents and marvel-making scenes. The scene is laid in New Orleans. He is passing his summer among the life-giving breezes of Schooley's mountain. It is said that he intends a voyage to England in the autumn, in company with the brilliant editor of the Louisville Journal, George D. Prentice. I hear that W. Gilmore Simms has in contemplation a romantic history of the Marion and Sumpter wars in South Carolina—a noble idea and in the hands of a highly accomplished writer. You ought to anticipate its appearance by giving us some extracts in the Messenger. It may be in full progress by this time. Halleck has been persuaded at last by the Harpers (they must have *harped* on one string for a long time,) to publish "Fanny," and his Croaker pieces. They appear in a neat volume, with a vignette view of Weehawken, concerning which he most exaggeratingly sings—

"Weehawken! In thy mountain scenery yet,
All we adore of Nature in her wild
And frolic hour of infancy is met;
And never has a summer morning smiled
Upon a lovelier scene—"

I would quote on for the length of six stanzas, if the passage had not been in two-thirds of the newspapers in the Union—because they are worth all the rest of the *poetry* in the volume. But poetic license never revelled in more outrageous hyperbole. Weehawken is a pretty place and commands some fine views; but there are a dozen spots in the vicinity of New York much more beautiful. Halleck's versification is often melodiously musical. Take the following specimen from his epistle to Walter Bowne:

Where are they now? With shapes of air,
The caravan of things that were,
Journeying to their nameless home,
Like Mecca's pilgrims from her tomb;
With the lost Pielad; with the wars
Of Agamemnon's ancestors;
With their own years of joy and grief,
Spring's bud and Autumn's faded leaf;
With birds that round their cradles flew;
With winds that in their boyhood blew;
With last night's dream and last night's dew.

The rhymes of the first three couplets are execrable; the poetry of the last three verses is very beautiful—and the whole flows as sweetly on as if it melted from the lips of a silver-tongued improvisatrice. The best of these poetical *jeux d'esprit*, these minglings of fancy and fun, is the epistle to Recorder Riker. The first quotation prefixed to it, is extremely felicitous. The pun is perfect.

"On they move
In perfect phalanx to the Dorian mood
Of flutes and soft *Recorders*."

Milton.

I cannot deny you the pleasure of two more samples of Mr. Halleck's versification. It is nearly as faultless as Campbell's. Of the following, the first need not be understood—read it for the sound! The second is a graceful tribute to the genius of two contemporaries.

"Thus shades the green and growing vine
The rough bark of the mountain pine,
Thus round her freedom's waking steel
Harmodius wreathed his country's myrtle;
And thus the golden lemon's peel
Gives fragrance to a bowl of turtle."

"*Hillhouse*, whose music, like his themes,
Lifts earth to Heaven—whose poet-dreams
Are pure and holy as the hymn
Echoed from harps of seraphim,
By bards that drank at Zion's fountains
When glory, peace, and hope were hers,
And beautiful upon her mountains
The feet of angel messengers;—
Bryant, whose songs are thoughts that bless
The heart, its teachers and its joy,
As mothers blend with their caress
Lessons of truth and gentleness
And virtue for the listening boy.
Spring's lovelier flowers for many a day
Have blossomed on his wandering way;
Beings of beauty and decay,
They slumber in their autumn tomb;
But those that graced his own Green River,
And wreathed the lauce of his home,
Charm'd by his song from mortal doom,
Bloom on, and will bloom on forever."

The little volume before me comprises simply Halleck's playful pieces; his Alnwick Castle, and other poems of a more serious cast, are soon to appear in a new edition, with probably some new stanzas, if the poet be not too incorrigibly lazy. You will learn my opinion of this author's rank as a poet from an article in a late number of the Democratic Review, entitled "Recent American Poetry." That article ought to express my opinions, since I wrote it myself. I shall not bid you good bye for this month, most patient Messenger, until I tell you of two new works which are shortly to be ushered before the public, which will make some pleasant noise in the literary circles. "*Hyperion*," by Professor Henry W. Longfellow, is printed and ready to be published. Why it is not, Mr. S. Colman can tell, not I. I have read every word of it with complete delight. It is a prose-poem of the most quaint and delicate workmanship. There is just narrative enough to it to serve as a thread to hold many pearls, not "at random" but in order "strung." The scenes are laid on the European continent. I will say no more now, as I mean that you shall have a notice of it, at least. The printing of the other work has just been commenced by the Harpers. They are not to issue it till after its publication in England. When that will be, who knows but Colburn? It is called "*Morton's Hope*." The editor of the New Yorker has seen it, and describes it, as written in a clear, vigorous and beautiful style. He says, in his last week's paper, that it will elicit "higher praise from higher sources than any work of the kind ever before given to the public in this country." By the way, I hear that the Harpers are to bring out the lyrics of your friend and correspondent, Park Benjamin. What do you think of it? Is he wise to venture upon such a collection of his "unconsidered trifles?"

I should have mentioned, as an evidence of the extent of the work and business of these publishers with the musical name, that they employ one hundred and twenty-five men and seventy-five girls, (very pretty ones too!) that they occupy two large buildings, and that they have invested in stereotype plates, full two hundred and eighty thousand dollars. "No more, at present," from your faithful

PROBUS.

New York, August 13, 1839.

NEW WORKS.

We would remark here, once for all, that we have only read portions of the works mentioned below. Our brief reviews, therefore, are not entitled even to the usual weight of opinions, but only of opinions founded upon partial examination. We begin with

Sejanus, and other Roman Tales. New York—F. Saunders—1839.

One of the most beneficial and interesting modes in which fiction can be employed, is that of illustrating historical events. Even to those well versed in the records of the past, a well-written and skilfully conducted tale, selecting its actors, incidents and machinery from those things which have really occurred and are chronicled among the annals of nations, will render facts long since learned, fresh and familiar; and those events of which he has read in dry and ponderous tomes, reanimated and arranged by the power of genius, with the light of its imagination shed over the whole, clothed in the garb of romance, linked with the minute action of particular characters and moving amid glowing scenery, will leave a more vivid idea of that which was reality, and impress the memory deeper than before. But the writer of fiction should ever possess the consciousness that he writes not merely for the literary man and the scholar, but to a great extent for those to whom history is only known in its prominent features and general outline. Those whom absorbing devotion to business and severe labor hinder from perusing the more substantial works of literature; or rather, whose inclination prevents—will seize upon the novel and the tale to while away their hour of relaxation or of idleness. He, then, who interweaves some historical truth among the web and woof of his story—giving it dramatic force and the interest of romance—may bestow much real benefit, as well as amusement, upon a large portion of those for whom he caters. The fact, moreover, that it is founded on history—that those who move in his legend have really trodden this earth and spoke and acted among humanity—that such and such events have actually taken place and left their marks and their monuments, will add to and deepen the interest of the reader.

We think it highly probable that this method was one secret of the triumph of Sir Walter Scott over his predecessors. Instead of sentimental heroes and sighing and thwarted "love-y-ers"—instead of wo-begone and persecuted damsels stalking through eight volumes, wearing the bloom off their cheeks, and every now and then "burating into a flood of tears"—instead of mysterious chambers, curtained skeletons, rusty daggers, wax-lights and trap-doors—he seized upon real life and blended history with his fictions. We open his books and the slogan comes pealing down upon us from crag and glen, the psalm of the stern covenanters goes up from hill and heather, and the mail-sheathed hosts and tossing plumes of chivalry, rush in upon the arena before us. We see the giant Coeur de Lion as he embraces the royal Saladin; we hear the cry of the heralds and the shouts of the multitude as they burst from the lists at Ashby. True, he did not neglect those all-essential ingredients of romance which those before him had em-

ployed—but he threw them in a new light—he connected them with treasured themes and interesting facts. Hence one great excellence of his works.

The volume before us is composed of tales founded upon events of Roman history. The period chosen is a deeply interesting one—that in which the shadows began to fall upon the imperial city, and the principle of decline to work with its weakening influences upon her palaces and altars. High and eloquent themes for the writer of fiction lie around the blood-washed throne of Nero, and all through the lapse, until the dark and hurrying hosts of the barbarian rushed in upon her like waves of desolation.

The author of this work, as some of our readers at least know, is Mr. Maturin, a son of the celebrated writer of that name. We do not know that these tales are any better if as good, as those written, we think, by Brooks a few years since—at least judging, in both cases, by specimens. There is no great skill displayed in plot, but they are well written and evince merit.

He seems, like his sire, somewhat fond of the horrible, although his taste does not evince itself in creations so supernatural and wild as those of the author of *Melmoth*. The promise of this work will, we trust, brighten into a steady and secure reputation. We give one extract—the last interview of Sejanus with his wife—as a specimen of the author's powers, from which, it is possible, our readers may be better enabled to form an opinion than from our crude and short critique.

"Nay, why art thou here?" said the prisoner, as he turned impatiently from Apicata, and, as conscious of his own pollution, shrank from her embrace. "Have I asked this of thee, to come and look upon me chained like one whose hour is appointed? Prythee, tell me not now of love, for mine hath been unhappy and accursed." "Had'st thou made thy wife," rejoined Apicata, her voice struggling with the bitterness of tears, "the truster of this foul secret, the unholy love thou speak'st of had not now a single pang for thee. But I will not chide thee now," she continued, clasping to her breast her degraded husband, while a smile faintly strove with her wild expression of grief. "Think not, in this last and dismal hour, which parts our love forever, making me lone and widowed, and this, thy child, fatherless—think not, though the gods desert, and man frowns on thee, that the same fate which makes the cold and senseless world thine enemy, can chill the heart of wife or child to thee. Nay, turn not from me—we will not part—they dare not—" "Dare not!" retorted Sejanus, "What dares not the torrent when ruled by the tempest? What dares not the lightning when cloud meets cloud? But why—why," he added, "linger out the agony of our parting moments? Better the bolt should fall upon its victim, than hover on in silence and in vengeance." "I came not here," replied Apicata, clinging to him with that ardor which seemed to omen a last embrace, and mock the hopes she strove to lend—"I came not here to listen to despair—to add weight to the fetters which encompass thee, or gloom to the dungeon which cuts thee off from life and joy. I came to speak of hope, of pardon, and of freedom. Caesar hath been ever gracious to thee—can he turn in silence from the prayers of mother and child?" "No more—no more;—no wife—no child," cried the wretched man, subdued to tears, the associations of home kindling once again the embers of expiring nature, and softening the obduracy of guilt—"No wife—no child," he continued, clasping his hands to his eyes, as though to exclude the objects which reminded him of honor, happiness, and innocence. "They are here—here, amid the terrors

which surround, and the dangers which await thee," exclaimed Apicata, weeping on the hand she pressed in her's; "kneel—kneel with me, my child," she added, addressing her young daughter, whose tears gave strength to the appeal of the kneeling mother—"look on us at thy feet—look on and bless us. We will not part from thee, though man should doom, and death claim thee. The hand that lights thy pile, shall build one even for us."

As Apicata and her child knelt before him in their attitude of prayer and grief, the wretched man endeavored to conquer those recollections of home and happier hours, awakened by their presence—ashamed to show the feelings he could not subdue, he started impatiently from the spot, and walked to the remote end of the cell. The struggle was vain. Though power and ambition had alienated him from the ties and feelings of home, and obstructed the stream of Nature, poisoning her waters, and checking her impulses, yet the terrible summons of the last hour, and the warning voice of death, which sent its hollow echo through the dungeon, awoke once again within the heart, the father and the husband. He turned, and clasping his child to his bosom, wept upon it. It was long since that heart had known a single throb of Nature; yet, in the hour of parting and of death, she returned to weep amid the waste she left a paradise.

"My child—my child," he said, kissing it tenderly, his voice feeble and broken; "pardon that I have forgotten thee—have passed in heedlessness those happier hours, when I might have caught thy smile, and treasured it as a beam upon my path—when I might have heard thy voice of gladness, and deemed it some sweet strain to charm me from ill, and guide me on to good. Thy tears—thy tears, my child—they come too late. Wretch that I am! The child weeps upon the sire!—The gods—the gods, my child, preserve and guard thee ever!"

The last pulse of nature had scarcely died in that sad embrace, when a wild and furious shout, which resembled more the roar of distant waters than the union of human voices, broke on the ear of the wretched pair. To the murderer, it bore the omen of judgment. He clasped his child with a convulsive energy to his heart—he wept once more upon it—and once more mingled blessings with his tears. Apicata still hung upon his neck, trembling as those fearful sounds rose and died in the distance. As they approached, the name "*Sejanus*," uttered with savage execration, by thousands that seemed to have but one word to speak, reached them with an appalling distinctness. The unhappy couple clung still more closely together, as though Nature rallied her energies to meet the fearful hour which was to destroy and paralyse them. The tempest had slumbered but for a moment, only to renew its strength. Again it rose, the tones more wild, and the curses more bitter, as proximity gave them additional power—"Sejanus to the Gemonie!* The Tiber! To death with the murderer!" Such were the fearful expressions which reached the cell from that yelling ocean of human beings, as they moved onward to the prison from the Temple of Concord, where the Senate had met and condemned Sejanus; the mighty mass animated by the one murderous cry, and bound by the one iron chain—Vengeance!

In the pauses of that fearful yell, not a word had passed between wife and husband. Sejanus' eyes were fixed upon the open space before the dungeon. Flight could not preserve him—his pursuers were even now at his prison door. As the shouting rose more strongly, he endeavored to move from the spot, for the purpose of concealing himself in some remote corner of the cell. He could not stir. Unconsciously he bore the helpless form of Apicata, who had swooned in his arms, and his

* The *Gemonie Scala*, were a flight of steps at the foot of the Capitoline hill, where were exposed the bodies of malefactors, and thence dragged by hooks to be plunged in the Tiber.

† The Senate met in different temples.

child still clung to him, embittering his agonies with its tears and lamentations.

Still rapidly came on the fierce and disordered mass, and louder rose upon his affrighted ear the cries of the many-mouthed monster for vengeance. More fervently in that moment of despair he clasped the fainting form to his breast, and felt even the pulseless, inert burthen link him more strongly to hope. Savage and merciless though the crowd might be, could it while the ties of nature thus coiled around him—wife and child speechless in his embrace—cry aloud for his blood, and wreak its vengeance?

While the miserable man thus clung to a shattered raft amid the waste which swam before, and the storm which pealed around him, the yelling of the mob and imprecations on his name came on still nearer, like waves that gather in the distance, and, bearing on the fragments of the wreck, bring the ghastly offering at our feet. A moment more, and the leaders stood before their victim.

They looked on him, pale and trembling in the embrace of his wife and child, but the sternness that bowed the iron and resolute visage of each, showed that the heart was impervious to the silent appeal of nature. Still on they came, tumultuously; every shout a curse upon his name—every cry, for vengeance. The eyes of Sejanus passed unconsciously from one to the other, as in fierce and impenetrable array they ranged themselves before his dungeon; some armed with clubs, others with swords, as design had provided, or chance flung them in their way. A dim and confused mass floated before his imagination: he could not trace a single feature, nor recognise a single voice, but the dreadful perception weighed upon his mind of one vast body knit together for the same dreadful purpose—death and destruction.

"Away, away with him! the rope! the hook!" the murderer to the Tiber!" burst with a simultaneous discord from the multitude—and, as they shouted, the ghastly instruments of execution were exhibited, and one mighty rush on the moment filled the cell. Sejanus spoke not, stirred not; he stood perfectly motionless, save for a convulsive tremor of the arm as it unconsciously clasped more closely, for the last time, the pledges which life had left him.

Regardless of the protection vouchsafed to him in the presence of wife or child, they grasped him violently and bound him. One shrill cry from the wretched man, as he struggled with his foes, for mercy, woke Apicata from her trance. The child knelt to its father's enemies, clasped its hands in the speechless terror of childhood, and what it could not ask with words, implored with tears. By its side knelt its mother, her hands clasped to her fevered brain, and the frenzied expression of the eye, denoting the pain and agony of the heart.

"Death! death!" rang on all sides with fearful force making the dungeon vocal with the terror of its echo, and the demon-fierceness of its instruments. Vain and impotent were the struggles of the wretched man against the overpowering mass that pressed upon him, each eager in the work of blood, and deeming vengeance alone the expiation for the murdered heir of the Cæsars. In the pauses of their unbridled rage rose the voice of Sejanus for "mercy!" stifled with terror and the exhaustion of physical struggle, like the choked voice of the sinking swimmer amid the momentary slumber of the tempest.

"Mercy? mercy? Ha, ha! Mercy to the murderer? Away with him!" was the infuriated and deriding answer, as almost with one hand, they grasped and tore him from the innocent forms which still clung to him.

"Have ye no mercy? mercy for his wife and child?" cried Apicata, following them on her knees as they tore him from her presence, her hands locked with a convulsive agony, "a wife—a woman, kneels, implores ye as men. Leave not," she continued, clasping her child and presenting it to the multitude, with that passionate and unuttered eloquence of gesture which nature

lends the mother in the moment which threatens her offspring; "leave not this child fatherless, she hath not wronged ye. Her tears speak her innocence, and beg in silence for the father."

She spoke to stones, to men hardened by the contemplation of the crimes they came to avenge, and deaf to every sound save the reiterated cry which burst from their own lips—"death! death!"

"The rope! the hook! the Tiber!" rose once more around and above them. The hideous images created by these words inspired Sejanus with a wild and terrific energy, which for the moment baffled even the strength of numbers. He rushed upon his most forward antagonist, and, seizing a club, hewed his way through the pressing crowd. It was vain, however, as the delusive strength which precedes the final throes of life, lending the hope of a moment to the dying; the club was stricken from his hand, and gasping, shrieking, and struggling, he was overpowered and borne down breathless to the earth.

"Guilty! guilty!" shrieked the doomed man, his smothered voice scarcely rising amid the pressure and the tumult, "still, mercy—mercy—oh! spare—"

A blow laid him dead at their feet, in the very moment of entreaty; the rope had been adjusted round his body, and, amid a burst of savage exultation which seemed to anticipate even posthumous revenge, he was dragged from the prison.

Mother and child were now the solitary tenants of that dismal cell. Some moments after they had left the prison, she endeavored to collect her scattered senses; she looked round wildly; she could individualize neither object nor place; time seemed to fly with a speed which bore away the reality of the image, only to leave its horror in the dream; the dim perception of furious clamor rang in her ear, and the figures of armed men surrounded her in a dense and congregated mass; a frown knit every brow, and sternness compressed every lip; yet was every thing in that moment confused and impalpable.

Amid this vague and wildering thought, she felt the arms of her little daughter Claudia clasping her neck, she heard her soft and sorrowful voice, as vainly she breathed accents of tenderness and consolation. The voice of her child was a link to the horrors of the scene she had witnessed; with the force of a spell it re-painted the murderous mob, as they pressed around, and trampled to the earth her husband; she heard her husband's dying shriek; she saw once again the terrible and convulsive struggle of his last moment. As she dwelt upon the vision, imagination gave it a deeper coloring, and a tangibility more hideous even than sight itself; she seized her child and rushed from the spot, where she had knelt, and beheld her husband's murder. But nature was faint and sick with the horrors that had curdled her warmest stream, and burst her strongest ties; she tottered forward a few steps, bearing her child, and sank with it lifeless on the dungeon-floor."

The Characters of Schiller. By Mrs. Ellet. Boston—Otis, Broad-
ers and Co.—1839.

We think that the readers of this work will feel disposed to say, that Mrs. Ellet has furnished them with a rich mental banquet. At least, we have read some seventy or eighty pages in it and say so ourselves. The style is elegant, and the analysis of character well conducted. Of this, we give the following specimen—that of Philip the second:

"Philip, as first in place, claims our attention; hard-hearted, cold-blooded, selfish and cruel by nature, limited in his intellect, unrestrained by moral principle, and of unbounded pride, he is thoroughly a tyrant. His ruling motive is a desire to extend and consolidate his own power; to this the promptings of nature and the dictates of humanity have been ever sacrificed. He

has no sympathy with a single fellow being; he has passed through life without a friend; uncared for by those most dependent upon his caprices, forever confined within the narrow circle of his own immediate self-interests—the gloom of his soul never lighted up by a single spark of any great or generous emotion. Yet we do not see him brooding over his cold and solitary destiny; he sways a mighty sceptre with an iron hand, with an indomitable will, and finds his employment and pleasure in subduing the force of others, in adding to the vast distance that already separates him from inferior mortals. To elevate himself, and through himself, all that bears relation to his greatness, is the sole aim of his existence; an aim which he pursues steadily and unswervingly, and to which he would render all things else subservient. His bigotry and relentless tyranny have plunged the Netherlands into misery, and excited them to revolt; but the flinty despot dreams not of retracing a step of his course, to secure their allegiance; the thought of their sufferings, of conciliating clemency, finds no place in his mind; he discerns afar off the goal of his wishes, unlimited sovereignty;—the path to it is through blood and misery, over the trampled bodies of thousands of his subjects—the desolation of widows—the ruin of orphans—the blight of a prosperous and happy land—but he pauses not, though the sympathies of Europe for an outraged nation call on him to forbear! His understanding, fettered by selfishness, admits not the idea of the spirit of independence that is abroad; he hopes to conclude his work by the same means that begun it; to fling

“Himself against the wheel of a world’s fate.”

“This very resistless and relentless will, this immutable direction of purpose, invests Philip with a species of grandeur, a dignity, which revolting and appalling as it is, infallibly secures him from contempt. His cold cruelty excites our hatred; his despotic power, and the deliberate barbarity with which he uses it, awaken fear; but scorn is not for him; he is a dark and dreadful being, locking up in his breast, inaccessible to human emotion, designs and resolves fit for the conception of a demon—walking among men the object of mysterious terror, to blast and to destroy. His gloomy and austere superstition strengthens and heightens his other evil qualities, by stamping his actions with its terrible sanction. His jealousy is the offspring of pride; a pride of no generous origin, and producing no salutary effects; such a passion as might dwell in the bosom of the enemy of mankind. In the depths of his soul no soft or beautiful image is ever reflected; the stern and the hateful alone abide in those recesses unvisited by kindly gleams of sunshine. This picture is gradually unfolded to us in the course of the tragedy.”

We venture to say, that those who are not acquainted with the writings of the great German dramatist, will derive much instruction from the perusal of this work, and those who are, much gratification.

Harry Franco; a Tale of the Great Panic. New York—F. Saunders—1839.

We do not know whether we would be right in saying that the present is a period remarkable for the *cacethes scribendi* in the way of novels—but of the fact that the market is filled with works in this department of literature we are distinctly aware. But, if copy-rights can be sold and readers obtained, we have no objection in this point of view—it is a consolatory truism that we are not obliged to read all that is issued. There must, however, we would say, as a necessary consequence in such a mass, be much that is indifferent—much trash. We are gratified to see the intellectual developing itself among our national characteristics, but

we are by no means so infatuated as to suppose that one half—we will say one third—of what is written in this way, will reach a second edition, if they escape oblivion for a twelve-month—much less that they will add anything solid or brilliant to the monuments of our national literature.

These remarks are general, and are not meant particularly to apply to the work before us; although those who have taken more time and instituted a more thorough examination, for the purpose of passing judgment, may decide that they do so apply.

For our own part, we have been pleased with the portions of Harry Franco which we have read. It is filled with well-told adventures, is interesting and instructive. The style is easy, and the incidents, on the whole, natural and life-like. We commend it to our readers, especially to the young who are setting out in the world, to battle with its storms, and to encounter its snares and temptations.

We repeat that we were gratified with what we read. We, of course, do not pretend to offer special criticisms upon the work. We commend it to public favor, and hope that the author will not let his pen lie idle or cease from his literary labors.

North American Review—No. CIV. July, 1839.

This work is too well known to need commendation from our pen. It has long sustained a high place in our literature, and we trust that it receives the support which it merits. Those interested in metaphysics, will find an article suited to their taste, in this number, in the paper upon *Kant and his philosophy*, while all will be gratified by that entitled *Self Cultivation of the Christian Minister*. We commend the North American Review, earnestly, to public favor—to the patronage of our countrymen.

Literary Examiner, or Western Monthly Review—by E. Burke Fisher—Pittsburg, Pa.

We have been favored by the publisher with the second and third numbers of the “Literary Examiner or Western Monthly Review”—(the first it is presumed has miscarried)—published in the city of Pittsburg and edited by E. Burke Fisher—a gentleman of fine literary attainments. The work is of beautiful typography and each number contains nearly eighty pages of interesting matter. Many of the articles which our leisure has enabled us to read, are written with great ability, and there are none we believe not entitled to the character of respectable mediocrity. The tone of the numbers before us is both moral and patriotic, and the editor evinces the laudable resolution not to be behind in the race of periodical literature. We wish him and his infant enterprise success most cordially. And why should he not succeed? Pittsburg alone, it has been recently stated, including its environs, contains a population of fifty thousand,—and the rapid increase of our whole country is truly astonishing. Well does Capt. Marryatt say that statistical works on the United States, though accurate when written, cease to be so by the time they pass through the hands of the compositor and pressman. The fact is, that literary periodicals are as much the cause as the effect of literary appetite,—just as rail-roads increase travelling, whilst at the same time they accommodate it. Able, high-

toned and pure spirited works, like the "Examiner," are destined to exercise an important influence in our country. The world seems to be in a state of fermentation, and we have our full share of it. It is not to be denied that doctrines, sentiments and theories are promulgated and designs meditated, which are at war with the cause of virtue and sound morals, and if not counteracted will sooner or later destroy every thing like individual and national safety and happiness. Hence the necessity for all good men, who have the means, to encourage every thing calculated to arrest the march of corruption and decay. We must never cease in our efforts to promote the great cause of universal education. We must strive to purify public opinion and elevate the standard of public and private morality. We must endeavor to inspire the love of virtue and a taste for the beautiful and good both in art and nature. Our countrymen are too much wedded to the sordid pursuit of gain. How to grow rich, seems to be the only problem worthy of solution. To be free, virtuous, and happy, are objects of comparative insignificance!

The editor of the Messenger is one of the agents for the Examiner, and will with great pleasure receive subscriptions.

THE COPY-BOOK—NO. VIII.

A letter from Theodorick Bland, Jr., to his lady—copied from the original, and never before published.

My Dearest Patsy,—I hereby acknowledge the receipt of your three letters, (besides one I received on the road, favored by Capt. Nelson,) the first dated the 10th day of inoculation, the second the 3d day of February, and the last the 1st day of February. I am now set down with the serious intention of answering them, and of indulging myself after two or three days marching and counter-marching, in a little chat with my angel, my Patsy. But not like you, I have begun, and perhaps may end, with an account of myself. Oh, Patsy, why do you not speculate always of yourself, of your state of health, of your thoughts, and your actions;—of your thoughts, I confess you do;—but do not suffer them to run wild in the exuberance of your fertile, (for our situation) too fertile imagination. Believe me, my dearest wife, that Providence, to whom you fervently pray, will hear your prayer, and shield your husband from harm. The horrors of war, I mean the dangers of the field, are fewer than your fears and feelings suggest to you. I have been in the field; I have seen the enemy drawn up; and am safely returned to a mansion, as peaceful, though not so pleasant as our little farm. We have this day been amused with a distant engagement, which we since learn was at a place called Quibble Town, where there was an incessant fire of cannon and small arms for near three hours; the particulars are not yet come to hand. I was two days ago with part of my regiment, and a body of troops under the command of General Sullivan, on a foraging party; our plan was executed: one or two of the light horse fired a shot or two at a small party of the enemy; a party of foot marched up to attack them, but they retreated and left us the field, without the least damage done on either side. We brought off five or six hundred cattle, and about as many sheep, belonging to Tories, who had joined, and were about to join the enemy. Colonel Scott, of Virginia, had an engagement six or eight days ago, in which the enemy are said to have lost thirty men killed, and about sixty wounded; but from a tardiness in another officer, was obliged to retreat, leaving eight men killed, and ten or twelve wounded. The enemy were near treble his number, and he behaved gallantly. But oh, my dear, shall I tell you of the disgrace of our countryman, —. It will fly soon enough; I shall therefore say no more: a court martial has been this day held on him, and the best that can happen to him, will be to be broke with infamy. But what are these things to my Patsy? They are the common talk of the camp, and I thought I would give it to you. In your letter of February 1st, you tell me you have been (exceedingly) ill for five days; but think, my dear, how cruelly you have stopped: you do not tell me you are now well, nor can I know, but by the *have been*, and inferring from your hand-writing, and your going to the glass. You do not know, my dear, what doubts I

have had with myself, and what altercations in my own mind, whether you went to the glass, or the glass came to you. Such things as these are easily cleared up. Do not, my dear, torture me at a distance, with "but enough of myself." Of whom else is it I wish to hear? For God's sake, my dear, when you are writing, write of nothing but yourself, or at least exhaust that dear, ever dear subject, before you make a transition to another; tell me of your going to bed, of your rising, of the hour you breakfast, dine, sup, visit; tell me of any thing, but leave me not in doubt about your health. You began well,

but then you abruptly break off, and say, "but my fate cannot yet be determined." Has the doctor said so, or do I mistake the idea? Heaven grant I may. How cruel is this, my dearest girl, to leave me in suspense? Why, my dearest girl, will you torment yourself, in your letter of the third, by anticipating evil to yourself and me, and by a comparison of your situation with those who are apparently happier? Consider, my Patsy, you are a philosopher—you are a heroine—your feelings I love, but why turn them to your torture, or my anguish? You dive not, my dearest, into the dreary mansions, and lonely retreats of those who pass your window, with cheerful faces, and hasty steps. You feel not their woes—you see not their troubles; they may have husbands pining in dungeons, children ready to devour the scanty morsel that hard labor, and frugal industry may have scarcely earned, unknowing where the next morsel is to come from. They may have their nearest connections swallowed up at sea, or devoured by the horrid engines of destruction—they may not have a pillow whereon to rest their weary heads. From these, I thank my God, my Patsy is yet secure. Could you behold the distress that ravaging war has occasioned, in this once delightful spot, this garden of the world, you would say 'twere wise to keep it from our doors at all events. What is the sacrifice of a few years to the good of the human species? what heart can behold the outrages committed here, and sit with inactive silence and look on with obdurate apathy? Fear not, my Patsy,—yes, "you will again feel your husband's lips flowing with love and affectionate warmth." Heaven never means to separate two who love so well, so soon; and if it does, with what transport shall we meet in Heaven? And does poor Dido sympathise with her dear mistress? take care of her, for her master's sake; but let not any accident that may befall her, add one atom to my dear's distress. Are you not an artful slut?—I too could, nay almost had made a blot. Did you not know the eloquence of that black spot in your letter? Why was the ink lighter colored than the writing? Was it not diluted with a precious drop from my dearest Patsy's eyes. I thought it was, and kissed it: henceforth I shall think a blot the most elegant writing. Not one letter. Yes, my dear, I have stolen from the silent night two hours about a week ago, and sent my heart to you in a sheet of paper. Have you not received it? I left it at head-quarters, and will inquire after it to-morrow—no, I cannot. To-morrow I shall go to Brunswick, if nothing happens to prevent it, by order of the general, with a flag of truce. It will be, I believe, a pleasant expedition. Perhaps I may meet some of my old acquaintances. You say, my love, you must see me for a very particular reason. As soon as it can be done with honor, my Patsy shall be gratified; but that, alas, (is now) impossible. I will not flatter, my dear; but why sit down in silent melancholy? Why make yourself, and me too, unhappy? No, my dearest girl, let me hear that you are easy, sprightly, gay and cheerful. It will not retard our happy meeting, nor sour our separation. Why, when the cup is bitter, will you add gall to it? Your prudence has suggested to me what I did not think of. What gold and silver you can conveniently spare, you may leave with Mr. Powell. Render him and his lady my best thanks for their kind regard and civility to my Patsy, and apologise for my not waiting on them before I left Philadelphia. You may give *** a kiss for his kindness to you, and that will pay the ***** well enough. I know I value it at above one hundred pounds. Tell him I will pay him money for inoculating the negroes, as much as he asks. His man is good for nothing; I have cursed him ten thousand times. His kindness is nevertheless in letting me have him. If Isaac can be conveniently spared, after being well smoked, washed, and dried, send him to me, and take Kit; if not, send Kit, after a thorough cleansing—it would be bad to communicate the small pox. Captain John Nelson, of my regiment, will accompany you to Virginia, if you go soon; but I will write another letter in a day or two. God bless you—my paper is out, and my candle burnt down. THEO'R BLAND.

ODE TO LOVE.*

CHILD OF EDEN!—born in light,
Where Creation's wandering fires
Jewelled first the brow of night,
And the angels swept their lyres!—
Seraphs then by thee impelled,
Bent before the august throne,
And in ecstasy beheld
Thy bright effluence alone—
Glowing—burning—flashing down,
From Jehovah's awful crown!

CHILD OF PARADISE!—thy wings
Glorious as the morning spread,
When by Eden's glassy springs,
Earth's first pair of mortals wed;—
Lions terrible in strength
Court'd man's approving look,—
He before the serpent's length
Not as now in terror shook,
And the harps of angels played
Notes unearthly in the shade.

COMFORTER OF EARTH!—we kneel,
Drunk with pleasure, at thy shrine,
And in boyhood's rapture feel
Presence naught so sweet as thine.
In the mother's eye of blue—
In the virgin's blushing cheek,
Where the bright soul sparkling through,
Utters more than words can speak,—
In the first long kiss we see
Mirrored thy divinity.

Roll the battle's stormy drum!—
Wave the banner!—peal the fife!—
Hark! the fearful cry, "They come,
Sword to sword and life for life!"
See the patriot moved by thee,
Bleeding falls upon the sod;
Still he shouts "your watchwords be
FREEDOM! NATIVE LAND and GOD!"—
Hark the cannon's dying roll
Victory utters to his soul!

MURDER scowls his haggard brow!—
BLACK Revenge sits waiting by!—
Now the knife is lifted—now
Passion rolls her blood-shot eye!—
Softly—sweet thy words implore,
And thy smiles the brow have wreath'd;
PASSION's burning rage is o'er—
MURDER's glittering knife is sheath'd,—
For as brothers—friends embrace
In thy rosy dwelling place.

Leaps the storm-king from his cloud—
Bursts the whirlwind from his lair—
And the giant wood is bowed
In the tempest-troubled air!—
Save him, Heaven! the sheltering oak
Quivers—crashes on the ground;—
Scatheless of the thunder stroke;—
Tremblingly he looks around!—
Thine, oh! Love, the sheltering power
In Creation's darkest hour!

Gods from rugged marble start—
Blossoms gem the withered tree—
Glory is where'er thou art—
Ruin when bereft of thee!—
Ceased the ancient hymn of spheres—
Suns became at noon-day dim—
Mourning angels stood in tears—
Even shook the throne of HIM—
When thou for us glorified
In the mortal, suffered—died.*

MERCY'S SYMBOL!—at thy word
(Where the Tempest rear'd his form,
But his voice no longer heard,)
Rainbows wreathed the dying storm!
Thunders in their darkest ire—
Lightnings in their wildest flash—
Ætnas quench their deadliest fire—
Stormy oceans cease to dash—
When thy sunny brow appears
Sparkling from the clouded spheres!

ESSENCE BRIGHT!—thy fingers sweep
Nature's harp-strings, and her song
From the torrent-rill and deep,
Peals eternally long.

Where no eye has seen but His
Through the soundless sea of space,
Worlds by thee impelled in bliss
Roll with majesty and grace:—
Yes! where cherubs fear to tread,
Thou the dance of stars hast led!

GLORIOUS CHAIN! whose links unite
Earth to God's eternal seat—
Where the golden orbs of night
Are but clay beneath its feet—
Man—archangels—worlds adore thee—
Mountains—rivers—forests—flowers—
Torrents—oceans, bow before thee—
And the everlasting hours:—
Earth's assembled thousands bending
Round thine altar breathe the prayer—
Hail the day when seraphs blending
In the crimson clouds of air,
Ope thy temple—yet untrod
And unveil its monarch—God

* Love is here to be taken in its universal sense as the spirit that pervades all creation.

SECLUSAVAL;

OR THE

SEQUEL TO THE TALE OF “JUDITH BENSADDI.”

CHAPTER I.

A YOUNG LAWYER IN THE GOLD COUNTRY.

When I wrote the former part of my story, I expected never again to hear of Judith Bensaddi. Her residence was in England—mine in the Apalachian mountains—among which, or at least within sight of their blue summits, I expected to spend my days. Whatever fortune might betide either of us, it seemed improbable that any intelligence of the one should ever reach the other. Heaven seemed to have ordained that our future experience should have nothing in common, except the sad remembrance of our disappointed love, which we might each in our far distant homes continue to cherish in secret, and I at least would cherish in loneliness and sorrow, to the last hour of life. But the way of man is not in himself. The power that rules our destiny had ordained that I should visit London, and there receive most affecting intelligence of Judith. What I heard—what followed to agitate and perplex me still more—and what the issue was—I shall now proceed to relate, after premising a brief recapitulation of my former story, in order to refresh the reader's memory.

I was studying law, when symptoms of consumption drove me from my native Rockbridge to spend a winter in South Carolina. In the spring I set out with renovated health, to return home by way of Charleston and the sea to Norfolk. In the stage I found Eli Bensaddi of London and his lovely sister Judith, going by the same route towards Boston. We travelled in company, mutually pleased to have met, and I somewhat more than pleased with the beautiful black-eyed sister.

On the first day of our voyage, poor Eli fell overboard and was lost. Judith, in her first paroxysm of grief, also fell into the sea, and was saved by my leaping into the water as she sank. I took charge of the lovely mourner, and was conducting her to a friend of hers in Boston, when my ankle was so sprained in Philadelphia, that we were detained ten days, until her cousin Von Caleb came from Boston to take her home.

Meantime, my love for this pure and amiable young lady grew so intense, that I declared myself and offered her marriage. She frankly confessed that our love was mutual; but, to my great surprise, informed me that she was a Jewess; and because I had not known and considered this fact, she would accept my offer of marriage, only upon the condition that after my return home, I should deliberately and freely ratify the engagement.

From her cousin Von Caleb, and a miserly Jew named Levi, I first learned that her father was a wealthy banker, and that an uncle had devised her an independent fortune of three thousand pounds a year.

Judith and I parted with deep sorrow. On my return, a fit of despondency came on me and presented my intended marriage with a Jewess in gloomy colors. After a severe and protracted struggle of opposite principles, I was able to decide in favor of the marriage through the influence of Judith's miniature, which she had given me. I wrote two letters; the one to go by the

miser Levi from New York, as had been arranged in Philadelphia; the other to go by the usual means of conveyance. The former was probably suppressed by the designing miser, who desired Judith to marry his son; the latter must have been accidentally lost by the way. I waited in vain for an answer till the next spring, when I prepared for a voyage to London that I might solve the mystery; but was deterred from going by the loss of Judith's portrait. This unfortunate accident threw me into another fit of mental gloom, and unfortunately put an end to all hope, and all exertion to secure the lovely prize of my heart. I rashly concluded that my innocent Judith was false.

The ensuing August I was surprised by the receipt of a letter from her, giving me the history of her disappointment and despair at my long silence—her struggle with hopeless love for me—her conversion to christianity through the persuasive eloquence of an amiable young gentleman, whom she had met with among the lakes in the north of England,—and her final consent to marry that gentleman, to whom she was indebted for her christian hope and consolation.

This letter filled me with grief, with self-reproach, and with unutterable despair. Such was the unhappy conclusion for the time, and as I then thought forever, of my love-adventure with the beautiful, the accomplished, and the pure-hearted Judith Bensaddi.

All that I could now do, was to love without hope, and to mourn without consolation for my lost bride, until time and some other engaging pursuit, should distil their mitigating balm into my deeply-wounded heart.

Now I would fain hear no more of my lost one; that I might ever think of her as my own lovely bride, snatched by some evil fate from my arms, between the betrothal and the nuptials. I abhorred the conception that she lived on this earth, as the happy or the unhappy wife of another man. Whenever I found the train of my thoughts leading towards this painful conception, I shuddered and broke off the train, saying with king Lear in the tragedy, “Ah, that way madness lies.”

My only hope of relief from paralyzing melancholy, was to engage promptly and assiduously in the practice of my profession. My preparation was thorough and complete. Experience had now taught me the evil effects of indecision and melancholy. Dearly had I paid for the indulgence of these native tendencies of my mind. I was reduced to such a state that I must rally or perish. I summoned all my remaining energies to the rescue. I resolved to make the weak points of my character the objects of constant watchfulness, and of strenuous efforts at moral improvement. With the Divine blessing I succeeded in overcoming them, not wholly nor at once; (for vices of character are not cast off by a single effort;) but to such a degree from time to time, as to encourage persevering exertions, and to furnish a salutary example for the imitation of other young men.

My circumstances required a field of action more wide and promising than my native Rockbridge. I determined to try my fortune among the gathering population and stirring pursuits of the Carolinian gold country.

The day before I left the home of my youth, I took

a farewell ramble over the loved scenes of the vicinage. Among other spots of peculiar interest, I visited the one by the river side, where I had so unfortunately dropped my Judith's miniature. I searched once more, if peradventure I might find the golden locket-case; for the portrait I presumed to have been blotted out forever by the envious water. To my joyful surprise, I found the elegant case lodged in a crevice of the rock above the level of the river, now shrunk by the drought of summer. Eagerly I pressed the spring—the lid flew up—and so did my heart, when I beheld the unsullied likeness of my Judith, whose lovely self appeared once more to look upon me. The picture had been preserved by a glass cover sealed hermetically to the raised edge of the case. I conceived I know not what vague hope from this unexpected discovery. Heretofore this picture had operated with talismanic power to revive my love, and to brighten my matrimonial prospects. But now, when Judith was spell-bound by solemn vows to another, what potency could there be in this or any other charm to disenchant my lost bride, and bring her again within the reach of my arms? I could not tell; but nevertheless, the recovery of the miniature diffused a new warmth, and an obscure glimmer of something like hope through my soul.

Again I hung the precious jewel in my bosom, and ceased not to wear it for years afterwards. A thousand times did I open the case, and feel anew the fascinating beauty of that countenance; as often did those dark eyes of love seem to give me an inspiring look of encouragement. But when I would close the case, and look around at the realities of my situation, all my sweet visions fled and left me to utter solitude of heart.

I reached the gold country in time to attend the fall terms of the courts. I was so fortunate as to obtain immediate employment, first in a criminal case and then in a civil one; and each time I happened to make such a creditable effort, that I sprang at once into reputation and a lucrative practice. Whatever portion of my first success might be attributed to good fortune, I strove with all my energies to sustain and to elevate the reputation so happily acquired. I labored night and day to extend my knowledge of the law, and to prepare myself thoroughly upon every case put into my hands. I knew full well, that with ordinary talents, such diligence would ensure success, and that no degree of natural talents could give me ultimate success without laborious application.

So lucrative was my practice, that within six months I found myself in possession of more than a thousand dollars of clear gain; and what was of more value, my heart was relieved from melancholy; my soul was prompt to resolve and vigorous to pursue the course resolved upon. Such were the happy effects of diligence in an honorable vocation.

Speculation in gold mines began to rage; but I felt no inclination to deviate from the safe road of my profession into the hazardous experiment of gold mining. I was too full of law to think of gold in any shape but that of fees. Avarice was not my passion—chicanery I disdained—but the fair rewards of professional ability I sought, and felt justified in seeking. Yet was I incidentally involved in the gross earthy process of digging for gold.

A poor man had employed my agency to recover a

meager tract of land, out of which he had been defrauded by a speculator. But success in his suit was likely to make him poorer than before—for the soil would not repay the labor of cultivation, and the failure of the speculator in some mining experiments upon it, made the tract unsaleable as gold land. At last my poor client came and besought me to give him eight hundred dollars for his eight hundred acres of barren hills and vales. More out of pity than the hope of gain, I paid the man his price, and sent him rejoicing with his family to the rich lands of the west. For this charitable purchase I was ridiculed by the knowing ones, and had to hear sundry unfavorable auguries respecting my prospects of future wealth.

However, I was not discouraged, but immediately employed an honest man, acquainted with the business, to search my barren freehold for the precious metal. In a few days I turned the laugh against the knowing ones, by the discovery of a rich deposit of gold, in a little valley which had not been scrutinized by the speculator. It was the most productive mine yet discovered in the country. Besides the fine grains usually met with, lumps of gold weighing often an ounce and sometimes a pound, were picked out of the gravel. My clear profits from this source amounted to about a thousand dollars a month.

Now my attention was drawn to the mineralogy of gold mines. I began to study the subject at intervals, by way of relaxation from the arduous labors of my profession. I examined the localities of the mines, noticed the character of the minerals among which the gold was found, observed the conformation of the hills and vallies, and marked how the layers of rock were disposed. In this new pursuit I derived an unforeseen advantage from my college studies. In the course of my education I had gone through the mathematical and physical sciences, more with the view of gaining the honors of scholarship, than with any hope of practical benefit in future life. How often do young men mistake their true interest, when they neglect, as unprofitable, any part of those studies which the wisdom of ages has prescribed as necessary to a good education! My knowledge of chemistry, mineralogy, and geology—imperfect as it was—enabled me to pursue the study of gold mines with facility and success. In less than a year I had acquired considerable skill as a gold-finder.

A gentleman of my acquaintance was involved in a law-suit about a valuable gold mine in Georgia. I accepted his offer of a liberal fee to manage the case for him, and consequently had to make a visit to the newly discovered gold region of Georgia. This was about six months after I had commenced the study of mines. I embraced the opportunity of improving my knowledge of the subject by examining the Georgia mines. The suit was not tried until the succeeding spring, when I went a second time to the same country, and succeeded in obtaining a verdict in favor of my client, and thereby an additional fee of one thousand dollars for myself. But this was only a small part of my good fortune in Georgia.

On my return homewards, wishing to see the hill country, I was skirting the Cherokee border by an unfrequented route, when my attention was arrested by indications of gold. A torrent filled by extraordi-

nary rains, had lately torn up the ground in a ravine, and exposed the rocks at the base of a mountain. After a diligent examination, although I discovered no mine, I was strongly persuaded that gold might be found about that locality. I went to the owner of the land in the open country below, and found him disposed to sell, but so disgusted with mining speculations, by reason of his ill success in digging on this very land, that he refused an offer of partnership. I bought the tract, and immediately hired men to dig for gold. In a few days a rich and extensive vein of gold was discovered on the mountain side, where I had observed the favorable indications. A professed mineralogist examined it, and certified to its great value. The agent of an English company immediately offered me fifty thousand dollars for my discovery. I refused to sell, until further exploration should more completely test the value of the property.

Thus by a lucky accident in the first instance, and by a fortunate exercise of scientific skill in the second, I found myself become a wealthy man, within twenty months after I had left my native land, a poor young lawyer, to seek my fortune in the gold country.

Had I been less fortunate in my speculations, I might have continued to pursue the hazardous game of mining. But my extraordinary success itself alarmed me—after two such brilliant prizes, I could not hope for another—I might rather expect to find myself, the next time, on the descending side of Fortune's wheel. I resolved to quit the pursuit at once, before the spirit of adventure should grow into a habit, and lead me, as it leads most of its slaves, to misfortune, debt, and imprisonment. For the better security against temptation, I resolved also to sell the mines which I had discovered, as soon as I could get a fair price for them. My prudent resolutions on this subject were aided by the influence of another scheme, more congenial with my natural temper than delving in gravel and quartz rocks after the miser's god. What this new attraction was, I shall proceed to unfold in the next chapter.

CHAPTER II.

THE VALE OF SECLUSA.

During the first nine months of my residence in Carolina, I toiled incessantly at my profession, until my health was seriously injured. After the discovery of my Carolina gold mine, I diverted myself occasionally with mineralogical studies, but they were not sufficient to reinvigorate my overwrought system. When the summer heats became oppressive, I laid aside all my studies, that I might take a few weeks vacation in the mountains. Often had I looked with desire towards the great Blue Ridge of this country, whose magnificent summits cut their waving outline in the western sky. In Virginia this range of mountains is broken, to let the rivers pass through from the Alleghany to the sea; here it casts off the rivers from both its sides, and compels them to seek a passage from its impenetrable flanks by winding and tearing through other mountains of less stern and massive solidity.

To this sublime wilderness I directed my course, with the intention of exploring its deepest recesses and its most eminent summits. My good horse soon carried

me out of the realms of anxious gold-seekers to the forest wilds, where the herdsman and the hunter dwell in solitary huts, and breathe the free spirit of the mountains. About the sources of the Catawba, the Broad and the Saluda rivers, I found the most gashed, craggy, and savage region that I had ever seen. It was the very sort of country that I would have chosen to visit; consisting of ancient, steep, forest-covered mountains, rent, rugged, and grim with deep ravines, or dissevered by rich vallies of less horrid aspect—all watered with perennial streams, clear as crystal—here hidden beneath impenetrable thickets of evergreens; there leaping over precipices in splashing cascades, or gurgling through loose rocks in damp mossy ravines, or purling over gravelly beds in the rich low grounds of wider vales, and eddying here and there under crumbling banks and bare tree roots, in deep bluish trout-pools.

With delight I threaded the vallies, crossed the ridges and mounted the tall peaks, catching every hour some new aspect of Nature's wild magnificence. Sometimes I lodged in dwellings of hewn logs in the wider vallies, where civilization had begun to make inroads upon the savage wilderness. At other times I partook of the hunter's fare in his smoky hut of round logs, in the deeper recesses of this rugged land. One while I wrought my solitary way along horse-paths in dusky glens, or up and down the mountain sides; then again my journey was through pathless wilds, and to desolate summits, where the deer ranges and the wolf makes his den.

In the course of these laborious rambles, my attention was attracted by a remarkably high summit, or knob, a few miles south of the main Blue Ridge. The whole region about it was distinguished by the cragginess of its mountains, and the richness of its vales. I resolved to scale this conspicuous observatory. A pleasant valley led up to its base, where the valley contracted itself, and was parted into two deep, narrow ravines; the one on the left seemed to be impassable to my horse; so I took the one on the right, which led me up by the north-eastern side of the great knob, where it expanded into a beautiful vale, sufficiently large for a moderately-sized farm. Near the head of this lonely vale, I found a practicable way to the top of the mountain. The sides of this great eminence consisted in part of almost perpendicular precipices, supporting broad terraces of ground, so gently sloping that arable fields might be formed upon them. The top was capped by a flat rock, elevated upon high natural walls, that gave it the appearance of a vast, half-ruined castle.

The view was immense. On the side of the Blue Ridge, nothing was visible but huge mountain masses, with deep rents between them: but on the east and south, I could overlook the craggy-sided mountains of the vicinity, and see the pleasant hill country next beyond them; and over the hills again, I could discern at a great distance the lower champaign, stealing out of sight under the blue veil of the atmosphere.

After I had looked awhile over the distant regions, I cast down my eyes, and was smitten with admiration at the romantic beauties of a valley, that lay under the southern side of the mountain. It was enclosed on every side by mountains of great height and every diversity of form and aspect. The sides of these moun-

tains were deeply cut with wild narrow glens, one of which lay directly under my feet, beneath a perpendicular precipice a hundred fathoms deep. These glens all converged towards the centre of the valley; from their dark, shady recesses, streamlets flowed out, and uniting their cool pellucid waters, they formed a brook, which passed out of the valley by the deep contracted ravine that I had avoided as impassable.

The main valley was more than two miles long, and at the broadest part not less than a mile and a half in width: but the outline was so irregular, that its shape is nameless and indescribable. The surface was as irregular as the outline. Low-grounds nearly flat, dales of various width and curvature, hills of every shape, round-topped, flat-topped and ridgy; smooth or rocky—all gave an infinite diversity to the surface. The valley looked like a terrestrial paradise. Nature luxuriated in all possible wildness, richness and variety; requiring only the hand of man to prune and dress its profusion, to make it outvie all the pastoral beauties of Arcadia in the golden age.

When I descended, I entered the valley by the uppermost and longest glen, which led its murmuring streamlet from the main Blue Ridge. I had no sooner plunged into its dusky solitude, than I lost sight of all the sunshiny world; the lofty tree-tops formed so dense a screen, that the few straggling sunbeams which penetrated to the moist ground, were not recognised as daylight, but looked like glow-worms or fallen stars amidst the surrounding gloom.

Not a sound was heard for some time, but the soft purling of the brook among the mossy stones, or the occasional chirp of birds in the lofty boughs over head. After I had proceeded some distance towards the main valley, I heard the splashing of a waterfall. The sound appeared to rise from a deep cavern. I soon discovered that the brook fell into a chasm, a hundred and fifty feet in depth, and then flowed out between precipices of limestone into the main valley. There was a romantic wildness about this cascade, in some respects exceeding any thing that I had ever seen. The water fell into a deep shady pool, where I could discern scores of trout enjoying themselves.

When I got into the main valley, I followed a blind cow-path, which led me a winding way, by hill and dale; one while in the dusky shades of the forest, another while through native lawns and shrubbery, until I found myself at the base of a flat-topped hill that projected from the foot of the great knob, on the upper side of the deep glen, which I had seen under my feet from the mountain-top. This hill was about midway between the upper and lower extremities of the valley; and I knew from its position, that it would afford me the best general view of the landscape, that could be had from any point within the valley itself. I ascended its gently sloping side, and from its brow, had a near and delightful view of the dales and hills and glens and mountain sides. I gazed in a sort of ecstacy over the charming landscape. Never had a place so captivated my fancy. The scenery was so various and so rich—so wild, so sweet, so majestic; the place was so shut up from the bustling and contentious world, that it seemed to have been made for a hiding place from the storms of life; yet was it not so completely cut off from the haunts of men, as to wear the aspect of a pri-

son; for on looking through the ravine that let out the waters, I caught a glimpse of the open country of hills and vallies at a distance.

"Here, (I exclaimed in a transport of admiration,) here is the place where in all the world a lover of nature, of retirement and of books, might find the most delightful retreat: and yonder is the loop-hole through which he might still look forth upon the outer world of insatiate passions and self-tormenting hearts. So sweet a nook shall not be nameless: I call it The Vale of Seclusa, or in one word, Seclusaval. This flat-topped hill which opens at once all the beauties of the landscape, but especially the romantic glens on every side, is the hill of Glenview; and yon lofty mountain-head, which frowns so haughtily over this nearest glen, through which I look up at his sublime crags, is Craggyhead. I thank his grim majesty for giving me the first sight of this lovely Seclusaval; which, if Divine Providence grant the wish of my heart, I will purchase and improve, and make the retirement and the resting place of my future days. Oh! had it pleased God that she, the lost one of my heart, should enjoy with me the rural beauty and quietude of an abode so perfectly agreeable to her taste. The world might be searched in vain for a place where we could have spent our lives together so happily, as in this beautiful and romantic valley."

These last reflections saddened me; and thus I experienced that delight may be the immediate cause of sadness by suggesting some painful reminiscence. I looked again silently over the thousand beauties of Seclusaval; I drew from my bosom the portrait of my lost Judith; those eyes of love seemed again to beam into my soul; and then I sat down to weep, under an overpowering sense of loneliness and desolation, amidst the thousand beauties of Seclusaval. At length I closed the locket case and returned it into my bosom. The shadows of evening had covered the valley, and were following the sunlight up the pine-covered precipices of the mountain. I led my horse down the hill and directed my course to a solitary hut near the lower end of the valley. Here a hunter had pitched his habitation, and cleared a field in the rich low-grounds of the valley, and seemed practically at least to be "monarch of all he surveyed;" for it must have been a rare thing for any stranger to visit this secluded valley. I went nevertheless with confidence to seek a lodging in the "poor man's nest." On approaching I was met by three fierce mastiffs, that forbade my entrance without leave of the family "first had and obtained." The man came out, and, after calling off his dogs, invited me to enter. I stepped in, saluted the wife, and took my seat on a three-legged stool. After some introductory account of myself, I asked the favor of a night's lodging. It was granted, of course—but with more appearance of coldness and suspicion than is usual among mountaineers. It behooved me to make myself more decidedly welcome.

I had no sooner been seated in the character of a guest, than the dogs came in and smelt at me as if to try my quality. Finding the scent of the woods upon me, they wagged their tails; and when I patted their heads they gave me the friendly salutation of tongue and paw—licking my hand and leaping upon my breast; all of which I took very kindly, and thus secured the good will of their master. When I first enter-

ed the house, I saw four or five children run and hide themselves under the bed, and then sily peep at me. When I had done with the dogs, I called a little fellow coaxingly, who had ventured to put his head out of the hiding place. But at first they all drew back, and seemed frightened at my invitation. Finally, however, I got the boldest one to venture near me. I patted his frizzly pate, and took the dirty urchin upon my knee: after which I soon had the whole swarm upon me. Thus I won the mother's heart. I assumed an easy familiar manner with the whole family, and took every thing as if I had been accustomed to such accommodations. Consequently I was soon treated, not as a guest merely, but as a friend. The good woman did her best to show me kindness. She prepared me an excellent treat of jonny-cake, venison, and onions. She could have treated me also with new milk; but she was not disposed to put me off with such homely fare. She burnt some coffee berries to cinder, tied them in a linen rag, pounded them on the hearth-stone with the axe, put the pulverized charcoal into water, and boiled the mixture in a skillet. She then poured the black bitter liquid into her queensware bowl with blue flowers pictured on it, and putting in a little milk and maple sugar, handed me the finished product of her kindness. The water was irretrievably spoiled by the process: but what of that? Should I not drink the well-meant gift? Certainly I should, and did, with the firmness of resolution and fixedness of muscle, which the occasion required. And let me say unto thee, gentle reader, that shouldst thou ever be placed in like circumstances, then drink thou also,—yea drink heartily, for the giver's sake. Think not that thou canst ever show good breeding by turning up thy nose at the poor woman's fare:—nay, on the contrary, thou wouldst but show thyself impolite, ungenerous and every way ill-bred, to scorn the kind hospitalities of the poor. Therefore should the draught be never so bitter, drink it even to the dregs, rather than mortify thy kind entertainer. Away with silly pride and contemptible affectation. Remember, that in a few years thou wilt be as poor as thy neighbors. Death will soon bring down thy pomp and thy circumstance, and put an end to thy affected airs of superiority. But I will not tire thee with my homily.

From Larkin Strone, the hunter, I learned that Seclusaval was in the midst of an extensive tract of mountain lands, owned by Major Mudge, an old gentleman who resided at the distance of thirty miles in the country below. The next morning, after a farther exploration of the valley, I made my way out with some difficulty by the ravine, and went straightway to Major Mudge, confirmed in my resolution to attempt the purchase. I found him eager to sell: for being an indulgent father, and having several sons brought up to no useful occupation, he was greatly embarrassed to pay the expenses of their prodigality. The demands of their creditors, and of his own, were just now so pressing, that he offered at once to sell me his thirty thousand acres of mountain lands for the small sum of five thousand dollars. The price was very low; for notwithstanding the ruggedness of the country, the tract contained several thousand acres of rich vallies and arable mountain sides. Seclusaval alone was in my estimation worth the whole price. I therefore accepted his

offer without hesitation, and proceeding home immediately, I raised a sufficient sum from the profits of my gold mine, to make the first payment, and to commence a system of improvements on my new acquisition. I was peculiarly fortunate in obtaining an agent to manage my intended improvements.

Seven years before, Major Mudge had brought from England an intelligent and judicious gardener, whose name was Baylor. This man had conducted the improvements on Mudge's estate, with a union of taste and economy that pleased me exceedingly. He operated on the plan of following and assisting Nature, instead of attempting, by dint of labor and expense, to force upon the place a set of features and embellishments inconsistent with the design of Nature herself. Hence the garden, the park, and the other grounds of Major Mudge's estate, were all beautiful, because every operation of art was conformable to the genius of the place.

Major Mudge, for an obvious reason, was glad to transfer Baylor to my service; and Baylor knowing the old gentleman's pecuniary embarrassments, readily accepted my offer of employment. When he saw my valley, he was delighted with its appearance, and rejoiced in the task of assisting its natural beauties with the touches of art. He not only understood at a glance my theory of improvement, but suggested several things that I had not thought of, but which, on hearing his observations, I heartily approved. The primary operations were to be directed to the following objects, namely: first to open a farm and build mills in the valley three miles below Seclusaval; secondly, to convert the rich low-grounds from the ravine of Seclusa up to Glenview into a meadow—retaining, however, many of the fine trees, either singly or in clumps: thirdly, to convert the beautifully sloping sides of Glenview into a garden, retaining here also a number of the fine trees, shrubs and vines; and lastly, to beautify the remaining hills and dales of Seclusaval, by removing unsightly trees, and cleaning the surface, so that grass could flourish in these native parks. My faithful agent went promptly to work, whilst I returned home and resumed my professional avocations.

I did not revisit my wild barony until December, when I was on my way to Georgia. Seclusaval was already assuming the appearance of a park. Whatever was unpleasant to the eye, was disappearing from the noble woods; sweet lawns, winding and branching in various ways, not only gave variety to the landscape, but opened to the eye, as one passed through them, the most delightful views of trees, hills and mountains, on every side. The plough and the spade were preparing the soil for the grass of the meadow and the vines and shrubbery of the garden.

Baylor now suggested a sort of improvement that I had never thought of: this was to cover the lowest grounds of Seclusaval with the waters of an artificial lake. I was pleased with the idea of a lake, but hesitated to incur the expense, until he informed me that he had taken all the levels and measurements, and had carefully estimated the cost, which was surprisingly small. He showed me first a narrow cleft in the ravine where a dam could be easily built of the loose rocks near the spot. Supposing the dam to be twenty-eight feet high, the water would be thrown back a mile and a half to the foot of Glenview. He then traced for me

the exact boundaries of the lake. On the meadow side, the outline would wind beautifully with divers sinuosities. On the opposite side, the water would lave the bases of the hills, some with sloping, some with precipitous sides. At one place, half a mile below Glenview, a little bay would run a furlong up a dale between gently swelling hills; at another place, near the lower end of the lake, a narrow glen with steep rocky sides, would conduct the lake water to a spring-head, deeply hidden in the flank of the mountain, where the atmosphere was ever cool and dusky, between tall crags and densely interwoven tree tops. At the broadest part of the lake, the water would spread out to the breadth of a hundred rods; but generally the shores would be from fifteen to thirty rods asunder. The fountains that would supply the lake, being cool, clear and perennial, the lake would consequently never become stagnant; and would not only be at once beautiful and salubrious, but would moreover yield both pleasure and profit as a fish pond: thousands of trout and other fish, could live and fatten in its pellucid waters.

By the time that Baylor had shown me all these things, I became enthusiastic: "Mr. Baylor (said I,) I thank you for this delightful scheme of improvement. Go to work, and by the next summer, let me see the lake of Seclusaval reflect every object around it, from the green meadow banks up to the cliffs of old Craggy-head." "It shall be done, sir," was the prompt reply.

My income from my gold mine, and from my law-practice, was sufficient now, I thought, to justify incipient measures for the erection of a permanent dwelling on Glenview. I resolved to build a stone cottage on the brow of the hill where some fine trees of majestic stature overtopped a dense thicket of undergrowth, embowered and festooned with a profusion of wild vines. Baylor had already commenced pruning this tangled wilderness, which needed only his skilful hand, to convert it into a labyrinth of umbrageous walks and rustic arbors, romantically sweet, "for whispering lovers made." My fancy was pleased at the thought; but a twinge of sadness came over me, when I reflected, that all the charms of this lovely place would be in a great measure wasted on the lone heart of a bachelor, who had lost his bride, and could never love again. Nevertheless I ordered stone cutters to be employed, and materials of all sorts to be prepared for a neat rural mansion. What better could I do? If I was lonely, I needed the more to seek pleasure and consolation, from all the sources yet open to my desolate heart.

I did not again visit Seclusaval until the next spring, when I was returning from Georgia, after the discovery of my second gold mine. I found the improvements going on to my heart's content. Tenants had been settled in several rich vales, besides Seclusa. The mills and the farm near them, were in a state of great forwardness. A passable carriage road was made from the older settlements below, to the mills, and thence through the ravine into Seclusaval. The dam and area of the lake were prepared for the waters, which began to fill their destined bed, as soon as the massive wall of the dam was closed by casting earth upon its upper side to stop the crevices. I marked with interest the hourly growth of the lake. In three days it was full, and began to shed its superabundant waters in a pretty cascade over the dam; while the glassy expanse above

reflected the budding woods on the margin, and the hoary steepes of Craggyhead. I launched a rude boat on the calm waters, and circumnavigated the sweetly indented borders of the lake. I was delighted with the scenery on every side, but most interested with the romantic wildness of the dusky glen, now filled with water between its craggy sides. When I entered its narrow channel, it looked like some infernal river, with its dark still waters pent up between frowning precipices and the sombre foliage of the pine and the hemlock, that stretched their branches over the chasm. This stygian recess was the more impressive to the imagination, from the circumstance, that while we let our boat lie still on the water, and held our peace, not a sound was heard; unless it were the low murmur of the foliage in the breeze, and the soft gurgling of the fountain, which at the head of the glen, poured its little contribution into the lake, through loose rocks coated with moss. But no sooner did we speak, or strike the oar upon the boat, than a dozen echoes awoke and multiplied the sound, as if we had roused a troop of angry spirits to mock us from rock and tree. Hence I gave this the name of the Echoing Glen.

When we returned to the open lake, a light breeze came up through the ravine. Hoisting sail, we were soon wafted to the foot of Glenview, where the garden had already begun to look beautiful, and gave promise of becoming in another year a paradise of delights.

The recent discovery of my Georgia mine, determined me to enlarge my plan of improvement. I ordered the foundation of my cottage to be laid immediately, on a larger scale than I had intended, and pretty cottages to be erected for my steward and other tenants. Among the rest a shepherd's cot was to be set in a romantic place at the foot of a precipice, on the opposite side of the valley, for I designed to give little of my beautiful grounds to the plough; but to make Seclusaval a pastoral scene, where flocks and herds might graze the lawns and mountain sides, and the sound of the shepherd's pipe mingle with the song of birds and the chime of waterfalls, to animate the beauties of the landscape. The natural loveliness of my valley, inspired me with ambition to make Seclusa the most charming of all the ten thousand vales embosomed in the Apalachian mountain.

CHAPTER III.

THE VOYAGE TO LONDON.

The purchase of my lands, and the improvement of Seclusaval, involved me in so much expense, that I was under the necessity of selling one of my gold mines. For reasons formerly explained, I resolved to sell them both, and to renounce all future connection with mining speculations. Immediately on my return from Georgia, after my fortunate discovery there, I sold my Carolina mine for thirty thousand dollars. I could have obtained a higher price, if it had been set to sale a few months sooner; for it was becoming less productive than it had been, although it still yielded a large profit.

My supply of cash was now sufficient to complete my scheme of improvements, and to leave me still a considerable surplus. I had before made arrangements to transfer my residence to a village about twenty-five miles from Seclusaval. Here I took up my abode now,

that I might be near my beautiful valley. I preferred this new place of residence also on account of its agreeable society. Several families from the low country, had left their estates and settled in the neighborhood. The scenery was pleasant, and the climate salubrious: the nucleus of an intelligent and refined society was thus formed; and around this attractive centre, new families from below were yearly gathering. Literary institutions would naturally arise among such a people. An academy for boys had been founded and put into successful operation. But an attempt to raise funds for a female seminary had failed. The subscriptions were insufficient to erect the necessary buildings. The cause of the failure was an obstinate dispute about the location of the seminary; some desiring to place it in the village beside the academy, while others insisted that it should be located near a country church, lately erected at the distance of four miles from the village. The contest became so warm, that the whole scheme was abandoned. Thus it often happens, that a dispute about some incidental and subordinate matter, defeats the most important enterprises.

On my settlement at the village, I found several persons regretting the failure of so useful an undertaking. Now the question occurred to me, whether I was not morally bound to contribute, out of my abundance, to an object of such great and manifest utility. I was a bachelor indeed, and never expected to have a daughter to be educated: but that circumstance seemed to increase my obligation to aid literary institutions; inasmuch as my exemption from the burden of a family afforded me the more abundant means to become a public benefactor. I was a member of the society of mankind, and no less than others dependant, for my welfare, upon the intelligence and the good morals of the people. Divine Providence had given me extraordinary success. For what end? Not surely that I might consume this affluent store on personal gratifications. And then I considered, what an amount of blessings would flow from a well endowed seminary for females; what expansion of intellect, what refinement of sentiment, what elevation of character, what new sources of happiness, to the individuals educated, and through them to society and to posterity. The more I contemplated the object, the more did the feeling of obligation grow upon me. Finally, I thought of Judith Bensaddi; how much more charming, how much more useful, she was, by reason of her excellent education. I drew forth her miniature by the golden chain to which I had attached it, and caught fresh inspiration from the sweet picture of my beloved. "I have lost her, (said I,) but she shall be my good genius on this occasion. I had thought of subscribing a moderate sum for the seminary; now for her sake, I will make myself responsible for the undertaking. With the blessing of Heaven I will be the founder of a seminary, and will make up all deficiencies in the contributions of others. The institution shall be complete, in every thing necessary to the good education of females."

Such was the conclusion of my meditations. I instantly set to work. I headed a subscription with two thousand dollars, which I bound myself to pay, upon the condition that double the sum was raised by others. I called meetings of the people, and addressed them earnestly on the subject. In a week my condition was

complied with, and six thousand dollars were secured for the seminary. The location at the country church, was named in the paper, and was preferred by me on account both of the beauty of the situation, and its shorter distance from Seclusa. It was in the valley that led up to my intended home. Seven gentlemen were nominated as trustees; of whom I refused to be one, because I was soon to be absent on a long peregrination, and because I was a young bachelor. A plan of the building was soon agreed on, and contracts made for the erection of it without delay. I told the trustees to adopt a liberal scale of building, and if they fell short of funds, to consider me responsible for half the deficiency. Thus I had put a most benevolent enterprise into operation; and I felt a pleasure in reflecting on this good deed—a pleasure in some respects more heartfelt and consoling, than all the gratification that I had experienced from the treasures of my gold mines, or the delightful scenery of Seclusaval. It was a pleasure which, if less exhilarating at the moment, was felt to be of such durable stuff, that time could not wear it away, nor could misfortune poison its sweetness.

Before I had engaged in this labor of love, circumstances had directed my thoughts to the subject of a voyage to London. I desired to sell my Georgia gold mine, and to invest the proceeds in some productive stock. I was advised to sell in England, where speculation in gold and silver mines had risen almost to a mania. Mining companies had agents abroad, exploring America from Chili to Carolina in search of mines. In London I could sell under all the advantages of competition among the buyers. Though I had received constantly increasing offers for the purchase, yet none came up to what I considered a fair price.

Continued explorations had laid open the extent of the vein along the hill side, and proved the richness of the ore. Several mineralogists had examined it; two of these were agents of the Londoners, and all gave me satisfactory attestations of the value of the mine. These and all other needful documents being provided, I gave notice to the agents that I would sell the mine at auction in London about the first of August.

When I was prepared to set off, I made a parting visit to Seclusaval on the first day of June. My beautiful valley was putting on still new charms. A hundred varieties of trees, vines, shrubs and flowering plants, were blooming in the garden and about the margin of the lake. The meadow was green with its first crop of grass. Birds were merry in every grove. The cottage on Glenview was rising in beauty; and carpenters were busily constructing other cottages in pleasant situations. Baylor, my faithful steward, now recommended another improvement, which I adopted instantly. He had ascertained that the spring which flowed out of Craggyhead through the glen that opened by the side of Glenview, had its source at so high an elevation, that it might be conducted in pipes to my cottage for family use, and the overplus made to water the garden on the hill side.

"It is an excellent notion, (said I;) and I will order you a set of iron pipes in Philadelphia. Meantime have the ditch made and the pipes laid, in the course of the following winter." "It shall be done, sir," was the answer to this and all my orders to my worthy Baylor.

Having given directions about the various improvements to be made in my mountainous barony, I rode on horseback to the nearest stage-road, and then travelled rapidly to New York, where I embarked for Liverpool in a packet ship on the fifteenth of June.

The thought of my going to London, where, as I supposed, my beloved Judith dwelt, kept her dear image more constantly and more vividly present to my mind, than it had been during the two last years of my busy and enterprising life. The renewed habit of meditating on this dear lost one, gave a strange susceptibility to my fancy. Often when I obtained but an imperfect view of some young lady of her size and somewhat like features, I conceived that it was Judith herself, and my heart fluttered as if the notion were not imaginary.

A notable instance of this sort occurred when our ship was leaving the harbor of New York. We met in the narrows a French ship from Bordeaux. The day was fine, and the passengers were on deck admiring the scenery of the noble bay. The near approach of the vessels turned the attention of each party on the other. I was immediately struck with the appearance of a lady on the French ship. She was dressed in mourning. Her form and stature first, then her black locks and dark eyes, (as they seemed to me,) reminded me of Judith Bensaddi. Her eyes seemed to be directed towards me individually. The more I looked at her, the more did I think her like my Judith. I was so fascinated by this apparition, that I forgot to use the telescope in my hand, until the vessels were full twenty rods apart. When I directed the instrument towards this interesting object, I could get but a momentary glance of her features; but that glance put me in a tremor, for I saw those lovely dark eyes still fixed upon me, and the whole face was to my conception the face of my lost one. So persuaded was I for some minutes that it could be only she, that I would have returned instantly to the city, if an opportunity had been given me. But before the pilot left us in his boat, I had reasoned myself into doubt, as I soon after did into utter disbelief, of the truth of my impression. "How can I believe (said I to myself) that Judith of London, married no doubt and settled in her native country, should be just now landing at New York in a French ship from Bordeaux?" Thus I soon got rid of the agitation produced by the strange lady. By the end of the voyage I ceased to think of the circumstance.

On my arrival in London, I applied myself instantly to the business on which I had come. I called on the officers of several mining companies and exhibited my documents. I advertised the sale of my gold mine in three of the principal journals. My papers and statements were authenticated by two agents, and an American gentleman of science who had seen the mine and knew my character. Thus I was able to give purchasers the most ample assurance that all was right. Bidders manifested a high spirit of competition, and ran up the price to the unexpected sum of twenty-five thousand pounds sterling, equivalent to one hundred and twenty thousand dollars.

Having thus successfully concluded my chief business, I spent a few days in making purchases of books, scientific apparatus, and various other articles, for myself or for the female academy. I was then prepared to leave London for Paris.

But how could I stay a month in London, and not even inquire for my lost Judith? Yet I did so, though I did it with an aching heart. But, although I felt the most anxious curiosity to know her present state, I dreaded to learn it; and although I longed most intensely to see her lovely face once more, yet I shrunk from an interview with one so beloved, when the sight of her, and the living look of those eyes that had awakened unquenchable love in my heart, could only pain me now, and might affect me beyond the power of self-control. To see her as the wife of another, was intolerable—I could not encounter the shock of feeling that such an interview must produce. Nor could I believe that she would meet me now, without the most distressing emotions.

Still, when I found myself on the eve of departure, and no remnant of business served to divert my thoughts from the tender theme; my heart began to smite me sorely, for having been so long in London, and at last intending to go away, never to return, without even a word of inquiry after Judith Bensaddi. She would not have treated me with such cruel neglect, had she known that I was so near her dwelling place. I was aware too, that I must feel exceedingly unhappy, if I left my ardent curiosity unsatisfied, and learnt nothing of her, when I could so easily gain intelligence. I therefore resolved to call at her father's house in Piccadilly, and having obtained whatever intelligence I deemed interesting, to hasten away from a place that contained an object so painfully dear to my heart.

I had brought with me a memorandum which Judith gave me in Philadelphia, containing an exact description of the situation and appearance of her father's house. Guided by this, I found the house without difficulty. Just as I had satisfied myself that there was no mistake, and was approaching the door, I was startled by seeing a young gentleman come out with an elegantly dressed lady of Judith's size. A cold shudder ran through my nerves, when I conceived that this might be Judith and her husband. But I was soon relieved by a sight of the lady's blue eyes and light hair. When they had gone, I stepped up to the door, and to my astonishment read upon the knocker the name—not of Nathan Bensaddi—but of Sir David Monteith. Yet this must be the very house described in the memorandum—remarkable in its appearance, and one of the most magnificent on this splendid street.

Presently I knocked and was admitted into the hall. From the porter I learned that Sir David Monteith had occupied the house but a few months, and that the previous occupant was a Jew named Bensaddi, as well as the porter could remember. I sent in my card to Sir David, requesting the favor of a brief interview. After I had waited ten minutes, I was ushered into a parlor, where I met a brawny red haired gentleman, who bowed with haughty coldness, and stood before me as if to signify, "What is your business, sir?" I took the hint and instantly inquired, "Have I the honor to speak to Sir David Monteith?" "You have,"—and another cold bow. "I came to this house, sir, expecting to find it occupied by Mr. Bensaddi, the banker. I desired to see some of his family with whom I became acquainted two or three years ago in America. Being a stranger in the city, I would take it as a favor if you would give me such information of him or his family, as might enable me to find them."

The cold haughtiness of Sir David relaxed immediately; he saw that I was not a designing nor an idle intruder. He asked me politely to be seated, and began to tell me several things in answer to my inquiries, until he gave me the intelligence, of which the following statement expresses the substance.

"I will with pleasure give what information I possess, respecting Mr. Bensaddi and his family. It is a mournful story. I never knew any of his family, but I was personally acquainted with him in his character of banker. About two years ago I had some claims on him, and hearing at Edinburgh, where I then lived, some alarming accounts of his losses, I hastened to London to see him. He had lost heavy sums by failures of houses indebted to him; but he so well satisfied me of his safety, that I not only left what I had before in his hands, but increased the deposit to a considerable amount. No banker in the kingdom had more of the public confidence, both in respect to his personal uprightness and his sound condition as a banker. He seemed to have completely recovered from the shock, when about a year ago, I was astonished to learn his sudden and total bankruptcy. This catastrophe was brought about by one of the most artfully contrived frauds, of two as nefarious villains as ever deserved a halter. The one of these was old Levi, a Jew, whom he had imprudently trusted too far as an agent, and lately as a small partner in the bank. This old villain combined with the other, who was no less than the son-in-law of Bensaddi himself. His name is Brannigan—he is an Irishman—a smooth-tongued hypocrite, who imposed on Miss Bensaddi by the most lamb-like airs, until he made her his wife. After he had drawn what he could from Bensaddi in the way of dowry, and was admitted as a partner in the bank, he joined Levi, and by embezzlement and other villainous manoeuvres, which have never been fully unfolded, they got most of Bensaddi's funds into their clutches, and then left him to meet all the demands of the creditors. So vast was the sum which they embezzled, that on settlement the remaining assets were found sufficient to pay the honest creditors only twelve shillings in the pound. Now Bensaddi's amiable daughter came forward, and did an act which deserves to be engraven forever on brass and marble. She had a large fortune left her by an uncle. This, I presume, she retained in her own hands by the marriage settlement; for, although she was neither legally nor morally bound to pay her father's debts, yet she promptly came forward, and at the expense of her whole fortune, paid up all just claims to the uttermost farthing; saying that she would rather labor for her daily bread, than see her father's creditors go unpaid. She separated from her villainous husband, I infer—yet I do not know the particulars—however, when I came here to reside, about four months ago, I heard with sorrow, that she had gone in bad health to the south of France, along with her father, whose health was also very low; and about two months ago, I was grieved to learn, that after burying her unfortunate parent, she died of a broken heart, and was laid by her father's side."

Here my feelings overcame me, and I exclaimed, "Dead! Did you say that Judith Bensaddi is dead?"

"You mean Mrs. Brannigan, I presume. I grieve to say that she is unquestionably in her grave. I saw the fact announced in the papers."

When the baronet thus solemnly confirmed the doleful intelligence, I groaned—I gasped for breath—my eyes grew dim—my ears tingled—and I was sinking into a swoon, when Sir David observing my situation, sprang up and brought a glass of water, some of which he sprinkled on my face, and the rest he gave me to drink. This timely application revived me, and I gradually recovered the faculty of speech. I then felt it incumbent on me to explain the cause of my deep emotion at the news of my Judith's sad fate. I gave him, therefore, a succinct account of my acquaintance with her, including the chief incidents of our mournful love story. He was so interested by the narrative, that he called in his lady and a beautiful blue-eyed daughter of eighteen, and after presenting me to them, and explaining the object of my call at the house, he requested me to repeat my story to them. I did so, and went more fully into the particulars. I spoke with a natural pathos, prompted by my feelings, and so affected the ladies, that they wept at my story, and continued to shed tears for several minutes after I had concluded. This sympathy on their part, unsealed the fountains of my own tears, and I uttered my lamentations with a freedom, which nothing but the tears of my auditors could have justified in a stranger like myself. After our feelings had subsided a little, I rose to take my leave; but they pressed me to stay and spend the evening with them.

I staid several hours. Lady Monteith added some particulars that she had heard respecting the Bensaddi family and their misfortunes—all going to confirm my belief, that the hapless Judith had married an arch-deceiver, and had sunk to the grave in the flower of her youth, broken-hearted. "There at last (said I to lady M.) her many sorrows have come to an end—all lovely as she was in the beauties and the virtues of the earth, she is lovelier now, when arrayed in the unfading charms of a glorified spirit. It is selfishness, therefore, in me to complain of a dispensation of Heaven, which has taken her from a world that was not worthy of her, and has left me only this memorial of her lovely features." On saying these words, I took out the miniature from my bosom, and slipping the golden chain over my head, put the open picture into lady Monteith's hand. She expressed her admiration of the countenance, and handed the case to her daughter, who looked steadfastly at the portrait for a minute—then lifting her eyes glistening with tears, she said to me, "How unfortunate, that one so lovely should have been deceived into a fatal marriage, and thus taken from a gentleman who could appreciate her beauty and virtue, and would have made her happy. How unfortunate!" I felt that this was not a fashionable compliment, but the unstudied effusion of a sympathetic heart; and I loved the beautiful speaker, for the interest she took in my ill-fated love and its more ill-fated object.

When I expressed a desire to copy the article in the newspaper, which announced my Judith's melancholy death, a search was instantly made among Sir David's files, and the paper being produced, I read as follows:

"Died, at the village of Clairfont, in the south of France, on the 20th of last month, (April,) Nathan Bensaddi, late banker of London; and on the 30th of the same month, his daughter, the unhappy wife of Patrick

Brannigan. She had gone with her father to seek health and retirement for him and for herself, from unpropitious skies and more unpropitious connexions. But bright suns and kind strangers could neither restore their bodies to health, nor their hearts to enjoyment. They have found repose in the grave. This notice is sent by a surviving friend; that all who yet care for a once flourishing, but now ruined family, may know the sad fate of the father and the daughter who trusted and were betrayed."

I felt so melancholy, after reading this notice, that I took leave of the worthy baronet and his family; although kindly invited to become their guest, during as many days as I might choose to remain in London. I could stay no longer in a city where such distressing intelligence came upon me, and where all was strange and now gloomy to my imagination. I hurried over to Paris, where I spent a fortnight, and endeavored to divert my melancholy thoughts by looking at the gay sights of that metropolis of pleasure. But I had come in vain; unless it were that I purchased some books and other articles for my retreat in Seclusaval, to which I designed now to confine myself, as soon as I could make the necessary preparations. From Paris I went to the south, into the districts where wine and silk are cultivated. Here I engaged four protestant families to come over and settle on my estate. My object was to employ them in the culture of the vine and the mulberry, in a warm sandy valley of my estate—a place thought to be excellently adapted to these productions. I visited Clairfont, and with difficulty found the obscure graves of Bensaddi and his daughter. No inscription marked the spot—no friend resorted to it with tears. The sexton, after some consideration, pointed out the two hillocks, side by side. "This (said he) is the father's, and this the daughter's." "This, then, (said I) is my Judith's grave!" It was all that I could say. I shed a thousand bitter tears on the holy earth; and having thus recorded my grief, I went to Bordeaux.

Near the last of September, I embarked with my colonists for Philadelphia, where we landed after a voyage of five weeks. Here I chartered a schooner to carry my colonists, my water pipes, and various articles of furniture to Charleston, the port most convenient to Seclusaval. I intended to go by land directly to my native country of Rockbridge, and after seeing my friends there, to continue my journey to Seclusaval, to travel thence no more, until I passed "the bourne from which no traveller returns."

In Philadelphia I made a safe investment of the greater part of the money obtained for my gold mine. The stocks which I purchased then and afterwards, would altogether, yield me a revenue of more than six thousand dollars a year.

CHAPTER IV.

THE LADY IN BLACK.

In Philadelphia I took up my lodgings in the hotel where Judith and I had spent the ten most interesting days of my life—where in sadness and in delight we had lived like brother and sister—and where we finally separated with hearts intertwined and bound together in bonds of the purest and sweetest affection. Now, after an interval of three and a half years, I found my-

self again in the same house, but with feelings and under circumstances, O how changed!

I desired on my arrival, to visit the parlor which we then occupied, but was told that a family of strangers with a sick lady were now in possession. Five days afterwards, when I was about to depart for the south, I again inquired about the parlor, and was told that the family were just leaving it, and would go off in the carriage and sulkey at the door. The same moment I saw a gentleman and four ladies passing out in travelling dresses. One of the ladies was dressed in deep mourning and wore a thick veil. My curiosity was excited. I also went out to look at the party. The lady in black was behind, and got in last. She seated herself so as to face my position; but the veil concealed her face. Just as the carriage began to move, she drew her veil aside, and what was my astonishment to recognise in her features, a strong resemblance to Judith Bensaddi! Her whole person agreed with the description of my buried Judith; her raven locks, her black eyes, her oval face—all were like my lost one. But before I could scan the resemblance, to see if it were perfect, she was driven off, and I was left trembling, amazed and unsatisfied. So far as I could judge, she was exactly like, probably the very lady, whom I had seen on the French ship, when I was going out of the harbor of New York. I could not believe that this was my poor Judith, risen from the dead; yet, laying all fancy aside, the resemblance was so evident, that I was sorely perplexed.

When my stupor of astonishment had somewhat abated, I went to the clerk at the bar and inquired the name of the family. He told me that they were the family of doctor La Motte of South Carolina, returning home from a tour in the north. I asked if the lady in black was a daughter of doctor La Motte. "No, (said he,) I think she is the governess of his daughters, and that her name is—let me see—oh, here it is in the register—Miss Bersati." Here was another curious circumstance; the resemblance of the names; yet a difference too. A painful curiosity to know more of this lady, was excited; but how to learn more was the difficulty; for nothing was known here of the family, except the few particulars already mentioned. I could not discover even the quarter of South Carolina in which doctor La Motte resided.

I paid a mournful visit to the now vacated parlor. There was the identical sofa on which Judith and I had so often sat, while she nursed my sore ankle; there the very spot where we had mingled tears and throbs, and all the joys of our innocent love, on the night when we parted. I now left the hallowed spot with an aching heart, and in a few hours more was on my way again, by Lancaster, to my native Rockbridge. I gave my parents and friends—my *alma mater*, my native hills and vales—a visit of two weeks; and then, as I supposed, "a long and last farewell"—and proceeded southward to shut myself up in my own Seclusaval, there to live and there to die, a mourner and recluse; not that I had made a vow to do so, or that I intended literally to imprison myself in my mountain-bound retreat. But there I expected to abide in seclusion from the wide world; and only to make excursions beyond the limits of my estate, when some important occasion should summon me away.

I arrived first at the village, near which the female academy was located. I received a hearty welcome from my friends there, and was gratified to see the walls of the academy in a state of considerable forwardness. The books and apparatus, bought in Europe for the institution had just arrived, and were stored away until they should be wanted. The next day I proceeded to Seclusaval, and found every thing going on well. My beautiful cottage was almost finished. The parlor and library were already furnished; the hill-sides about the house were all trimmed and arranged in their garden style; multitudes of shrubs, trees, and plants of various kinds, had been growing in pots and boxes through the summer, ready to be set in their destined places in due season, so that by the next spring the garden would be complete. The other grounds and buildings would be in their finished state of improvement by the same time; so that Seclusaval would, the next season, exhibit innumerable beauties to charm the senses, and to make it one of the most delightful scenes of rural beauty in the world.

When my good steward, Baylor, led me into the parlor of my cottage, I remarked that he had arranged the furniture very tastefully. Among other things in this room, was a piano forte of German manufacture, which I had bought in New York with other furniture, on my way to Europe. I had taken a fancy to this instrument, because its tones were remarkably sweet, and because in appearance it resembled the one in Charleston, on which my lost Judith had played the airs which so entranced my soul. But why should a lonely bachelor have an instrument which he could not play? "Because, (said I to myself,) perhaps some lady visitor may two or three times in a year awaken its silent strings, and cheer my lonesome habitation."

When I saw the instrument now in its place, I said to Baylor, "This piano, I suppose, has never yet made music in Seclusaval." "Yes, sir, (he replied,) I was just going to tell you about it. Just a week ago to-day, I was directing the men about a terrace in the garden, when I happened to cast my eye down the valley, and behold, a carriage and a sulkey were coming up the lake side, full of ladies, except the sulkey, which had an old gentleman in it. A young gentleman on horseback led the way. They stopped several times and looked all round, as if they were admiring the scenery—and well they might admire it, Mr. Garamé. When they came near the foot of the garden, I went down and asked them if they would not drive up to the cottage. 'Have you a good road up the hill?' (said the old gentleman.) 'O yes, (said I,) two of them; you had better drive up this way by the glen side, and you can come down by the other side. You will then have all the beautiful views from the hill.' So I led them up by the glen road. They kept looking about every way and praising the landscape—as they had reason to do, you know, Mr. Garamé. When we got into the park, on the hill here behind the house, they stopped several times to enjoy the glimpses and vistas through the trees. You will say that I have improved them since you went away. I have cut a glimpse for the top of Craggyhead, and a vista for Rocky Nook cottage over the valley yonder. Well, when we got to the foot of the great tulip tree, out yonder, and the whole valley and mountains burst on their view at once, they cried

out, 'Oh how beautiful.' There was a lady in a black mourning dress, that seemed to be all in raptures at the landscape. When they had looked a little, and I could speak without interrupting them, I invited them into the house. They came into the parlor; but for some time they could not rest for going to the door, and looking through the window over the valley. Presently I asked the favor of the ladies to play on the piano and tell me if it was in good tune. First, a young lady in white played a tune very prettily. 'That is a very sweet instrument, (said the black-eyed lady,) and it is in very good tune.' Then she went and played herself, and such delightful music I think I never heard. She sung a mournful song, 'Mary's Dream;' and when she had finished and left the piano, I saw tears falling from her eyes. The old lady, Mrs. La Motte, then began to ask me about you. She said the people at the village below had praised Mr. Garamé's beautiful valley so much that they had come up just to take a look at it. She finished by saying that you must be going to take a wife, as you were making such a beautiful home. 'No, indeed, (said I;) he told me that he intended to live a bachelor all his days.' 'Why what is the matter? (said she, joking;) is he a woman hater?' 'No, (said I,) he is an admirer and friend of the ladies: but I think from what I have heard him say, that he once fell in love with a London lady, and somehow their love did not prosper—and having lost her, he expects never to love another.' When I said this the beautiful lady in black suddenly burst out a crying, and ran out into the yard to hide her feelings. The rest of them went out too, and after they had comforted the lady in black, they returned into the parlor and said they must go. I had refreshments brought in. At first they only tasted them sparingly; but I told them to make free and help themselves plentifully; for that you would not be pleased with me, if I let genteel strangers go away without partaking liberally of the good things in Seclusaval. Then they ate and drank freely; and when they left the house, I mounted a horse and rode with them about the lawns, and took them up to the dark cascade. When we came back, I proposed that they should take a little voyage on the lake: they consented to be rowed into the Echoing Glen. When they again mounted their carriages to drive away, the old gentleman staid behind a little, talking with me about the valley. Presently, he alluded to the lady in black, and I found out that his object was to apologise for her breaking out so, when I mentioned your being crossed in love. He said that Miss Julia Bensati, the lady in black, was in deep affliction; that she had lately lost her father, had lost her only brother before, and had like you been unfortunate in love. This was no doubt the reason (he said,) why she was so affected, when she heard of your case. He told me that she was a very amiable and accomplished lady, bred in London, and once in prosperous circumstances there; and being now reduced to distress among strangers, and a lady of tender sensibility, she was easily overcome by her feelings, when any thing reminded her of her misfortune. When he had finished his apology for the strange behavior of the lady in black, he thanked me for my kindness and followed the company."

Such was my steward's account of the lady in black; and the reader will easily conjecture the impression that

such a tissue of strange coincidences made on my mind. In spite of what I had heard and seen in London, I was almost persuaded that this lady in black could be no other than Judith Bensaddi, with her name slightly changed, probably for some motive of concealment. There was one circumstance which had escaped my notice in the tumult of my feelings, when I first heard in London of Mrs. Braumigan's death. Judith had a sister married to a christian gentleman, whose name I had never heard; nor had I heard the name of the gentleman to whom Judith had engaged herself. Sir David Monteith—being unacquainted with Mr. Bensaddi's family, might possibly be mistaken in supposing that Mrs. Braumigan was the daughter who gave up her own fortune to pay her father's debts. This noble act was certainly done by Judith, whose uncle had left to her the fortune that she gave up. So that there did seem to be a possibility, after all, that my Judith might be alive. I regretted exceedingly, that in the sudden perturbation of my feelings, I had not thought of Judith's sister while I was at Sir David Monteith's, and that I had left London without inquiring, or thinking to inquire, more particularly about the two sisters. Being left in some doubt now concerning my Judith's fate, I was prone to hope that the striking coincidences both personal and historical, between this lady and my lost one, were not accidental. Judith, I felt sure, would never have chosen to visit my dwelling without a previous explanation with me;—but I could imagine plausible reasons to account for this circumstance, so inconsistent with the well known delicacy of her feelings. She could not object to coming with her employer's family, without giving a reason that would betray what she would rather conceal; and knowing that I was from home, she had no reason to object: nor could she presume that the Mr. Garamé of Seclusaval, was the same person as the poor student of Rockbridge, whom she had known and loved three years before.

Putting all these facts and conjectures together, I was so nearly persuaded that the lady in black was my Judith, as to feel the most tormenting impatience to solve the mystery. But in vain did I attempt to trace the course of doctor La Motte, or to discover the place of his residence. The tavern-keeper at the village could give me no information; no one in the neighborhood was possessed of the knowledge that I sought. I concluded then to write letters to acquaintances in different parts of Carolina, and to get my friends to do the like; that, if possible, I might from some one obtain the desired information. At least fifty letters were written by me and for me; but four weary months passed away without a ray of intelligence. Nobody seemed to know Dr. La Motte. At last a correspondent in Charleston informed one of my friends, that Dr. La Motte with his family had a few days before embarked at that port for France; but that no such lady as Miss Bersati was with them. This correspondent had learned that Dr. L.'s residence was on the island of St. Helena upon the sea coast, south of Charleston. I determined to go immediately to the place, and obtain what information I could respecting Miss Bersati.

On the first of March, I mounted my horse, and put him to a full trial of his speed and bottom. In eight days I reached Beaufort, where I found that Dr. L. was well known. At his extensive plantation, ten miles

from Beaufort, I was able at last to get a clue that would probably guide me to my object. When Dr. L. left home for a visit to France, he obtained a situation for Miss Bersati in the family of Mr. Naudain, a relation of his, in the neighborhood of Porysburg on the Savannah. Thither I went in eager haste, and arrived at the house about noon, on the tenth day of my absence from home.

I was politely received by Mrs. Naudain in the absence of her husband. She informed me that Miss Bersati was an inmate of her family, and was then with her daughters in another part of the house. I showed such deep emotion on hearing this, that Mrs. N. suspected instantly the cause of my agitation; and knowing that Miss Bersati was in a correspondent state of mind, respecting some gentleman to whom she had been attached, the good lady did not wait for any detailed explanation, but on my expressing a desire to see Miss B., she smiled, and said that the young lady would doubtless be glad to see me. "I will request her (said she) to step into a private room, that so joyful a meeting may be undisturbed by spectators. Be so good as to keep your seat, until I return." I could not literally keep my seat. My palpitating heart would not let me rest a single moment, I got up and paced the room; then sat down again; but in another moment I was on my feet, hurrying from one part of the room to another. Every minute seemed an hour, till Mrs. Naudain returned and asked me to walk with her. I followed her footsteps into a long piazza in the rear of the house, and then to the end of the piazza, where we entered a passage, on the left side of which was a door standing ajar: beckoning me to enter by that door, she retired in silence. I stood a few moments to collect my spirits. I heard light footsteps within, of a person walking anxiously over the floor. Pushing the door gently, I stepped in, and saw the lady in black walking from me, unconscious of my presence. Her stature and figure seemed to be those of my Judith. Her hair, black and glossy as the raven's plume, agreed with my Judith's. The lady soon heard my approach, and turning round quickly, brought to view a face which again started the rushing tide of sensibility through my nerves. "My Judith, (I exclaimed)—my own beloved!" and I sprang forward to embrace her. She, when she caught the first glance of my person, uttered a faint cry of joy, and started to meet me. But before we met, I discovered an instantaneous change in her countenance. The glow of joyful surprise was converted into ashy paleness. An expression of anguish came like a flash of lightning upon her face. I was in the act of taking her into my arms, when she sank at once to the floor, as if paralyzed. I raised her up and placed her on a settee in the room, and snatching a cushion from a chair, put it under her head. She soon began to recover from her partial swoon. Before she was able to converse, I had time and opportunity to undeceive myself. I discovered—to my inexpressible grief and disappointment—that the lady in black was not Judith Bensaddi. She resembled her much in every striking peculiarity of feature. But a close inspection immediately detected differences that left no room for mistake. This lady's eyes were rather smaller and blacker, her complexion darker, her face longer, and the expression of her countenance was to me less benignly sweet and winning.

She rose after some minutes to a sitting posture, and giving me a sorrowful look, she sighed deeply without speaking. "Alas, my dear stranger, (said I,) we are both, I fear, sadly disappointed by the result of this interview. I have long sought you in the belief that you were a dear lost friend. You resemble her, and this resemblance deceived me." "Oh! sir, (said she,) you were announced to me as a dear lost friend of mine; it was a mistake on both sides; the shock overcame me; I saw that you were a stranger and not my friend. My hope is gone. Alas, alas, he is dead! I shall never see him again!" Here she burst into a flood of tears. After she had wept and sobbed a few minutes, I spoke some friendly words to her, and gradually led her into a conversation. The keenness of my disappointment would have been more sorely felt, if the anguish of Miss Bersati had not interested my feelings and excited my curiosity. I was exceedingly desirous to learn the story of one, who in so many points resembled my lost Judith, now lost again to my newly awakened hopes.

"Lady, (said I after a while,) your resemblance to one whom I dearly loved, whom I thought dead, but whom I hoped again to find alive in you, makes me desirous to know something of your history. Will you favor me with an outline of it?"

"I will, (said she,) if my feelings permit." "I have heard (said I,) that you are from London." "I am, (said she;) but I was born in Italy. My father, Anselmo Bersati, was a professor of music. After the death of my mother, he accepted the invitation of an English nobleman, and removed from Florence to London, when I was ten years old and my brother twelve. He had no other children. He taught music in the nobleman's family for a while, and was employed at the public concerts. His reputation grew, and he soon acquired a handsome income. He bred me to the same profession, and before I was sixteen, I was qualified to give music lessons. I was soon able to support myself in this way; and before I was eighteen, I got a good salary as musician in the opera. My brother preferred the mercantile business, and was bred to that. He was fond of travelling, and three years ago made a voyage to America. He returned to London with a young gentleman, Andrew Hazleton, of Charleston, whose father was a merchant in good business. I became acquainted with Mr. Hazleton; he soon attached himself to me; the attachment became mutual, and resulted in an engagement of marriage. He and my brother joined their influence to persuade my father to emigrate to Charleston, where they assured him of profitable employment in his profession. My expected settlement in that city, induced him to consent: and the next spring, now two years ago, was fixed on for the voyage. Mr. Hazleton returned home to wait our arrival for the consummation of the marriage.

"The next spring, when we expected to embark, my father was taken ill with a lingering disease, which confined him six months to the house. When he was able again to ride out, he had the misfortune to be thrown from the carriage and almost killed. At last, however, though threatened with a return of his old disease, he embarked with me, twelve months ago, for Charleston. But it was a sad embarkation; for on that very day, we heard that my brother had fallen in a duel at Havana, to which he had gone upon a trading voyage.

The news so affected my poor father, that he was taken sick before we lost sight of land. He suffered great agony during five weeks, and then, just as the American coast came into view, he breathed his last. Thus was I left a destitute orphan among strangers, and my first office on landing in a strange city, was to bury my father. His long illness, and my close attendance on him, reduced our resources, especially as he had given my brother a large portion of his capital, to set him up in trade. On my landing in Charleston, I had but small funds remaining. But I experienced great kindness from several strangers, especially from Dr. La Motte, who was a fellow passenger on the voyage.

"I must now tell you of another sore affliction on my landing. I did not find Mr. Hazleton, as I expected. He had written to me affectionately from time to time, during the first year after our separation. He then informed me that his father had met with misfortunes in business, which made it expedient for him to remove to New Orleans, where he might hope to retrieve his losses. He still urged us to come as soon as possible to America; assured me of his unchanged affection; and declared that nothing prevented him from coming to London for me, but the difficulty of his father's affairs, which required his aid. A few days before we embarked, we received a letter from him dated at New Orleans; in which he promised to meet me in Charleston, as soon as he should hear of my arrival there. As soon as I was able, after landing, I wrote to him an account of my arrival and of my sad condition. A month afterwards no answer had arrived. I wrote again; but no answer was returned. Dr. La Motte then wrote to a friend of his in New Orleans, to make inquiries. In four weeks he received an answer, saying that old Mr. Hazleton was dead, and that his son Andrew had embarked, three months before, on a commercial adventure for Brazil, and might be expected soon to return. This explained the cause of my receiving no answers to my late letters, and gave me some consolation. In the meantime, I resided in Dr. La Motte's family as governess of his daughters, and received great kindness from the family. I waited in hope of soon seeing or hearing from Mr. Hazleton. But another and another month passed away without intelligence. Dr. L. wrote again to his friend, and received for answer, that Mr. Hazleton had neither returned nor been heard from. I now began to fear that some fatal accident had befallen him. I had no doubt of his fidelity to me, and have never suspected him of repenting his engagement, or I should not have sought intelligence of him as I have done. In the month of August, I accompanied Dr. La Motte's family on a tour to the north, and returned with them two months afterwards."

Here I interrupted the fair narrator with the remark, that it was on their return from that tour, that I got a glimpse of her face in Philadelphia, and afterwards heard of her visit to my vale of Seclusa. She gave me a look of surprise and interest, when I mentioned Seclusaval. "Are you the owner of that beautiful valley?" "Yes, Miss Bersati; and it was the feeling which you showed on hearing of my disappointment in love, that led me to seek this interview, in the hope that you might indeed prove to be my lost Judith Bensaddi." "Judith Bensaddi! Judith Bensaddi!" said she, in a sort of amazement: "Is she the lady whom you loved?"

"Yes,—whom I loved and lost: did you know her?" "Yes, my father was her music-teacher; he often praised her as the finest and most amiable scholar that he ever had. I saw her a few times; but I never had any intimacy with her." "Can you tell me, Miss Bersati, any thing of her history shortly before and after her father's bankruptcy?" "Very little, sir; I remember to have heard that she paid her father's debts out of her own fortune;—and I think that I afterwards heard of her going to France with her father, and that he died there." "Did you ever hear of her marriage, and of her husband's name?" "I remember to have heard some years ago, that she was expected to be married to a clergyman who had baptized her: but although my father was so often at Mr. Bersaddi's house, while giving her lessons, he ceased to have any intercourse with the family afterwards, and we did not often hear of them: I do not think that I ever heard of her marriage." "Did you ever hear of her death?" "I heard something of another death in the family; but I cannot say for certain that she was the one."

Thus unsatisfactorily did my inquiries terminate. Meanwhile Miss Bersati gradually assumed a more cheerful air, in the excitement of conversation. I staid until the next day, and became sufficiently acquainted with Miss B. to admire her beauty, her talents and her accomplishments. I thought that she showed no reluctance to cultivate an intimacy with me. She often alluded to the beauties of Seclusaval, and to her despair of again seeing her lover. I thought her an interesting lady, resembling my Judith a good deal;—but on the whole far inferior, especially in the undesigning simplicity of heart, and virgin purity of sentiment, which gave to my lost Judith her transcendent loveliness: not that Miss Bersati was notably deficient in these estimable traits of character; but the Italian ardor of her feelings, was not tempered with such a degree of unsophisticated sweetness and modesty, as distinguished my Judith. Yet I sincerely commiserated her misfortunes, so much like those of my beloved.

The reader, if interested in her story, will be pleased to hear that within a month after my visit, her lover returned and fulfilled his engagement.

CHAPTER V.

THE MUSIC TEACHER.

I returned home with a heavy heart; taking Charleston in my route, that I might lay in a supply of all things needful to complete my establishment in Seclusaval, where I was now more than ever disposed to lead a solitary life, "the world forgetting, by the world forgot." With this view I purchased every thing now, in the way of furniture and stores, that my little household and my laborers would be likely to need for several years. I was liberal, if not profuse, in my purchases; I designed to be not only just but generous to my agents, tenants and dependants: and accumulated such various stores, that I could always have suitable presents to bestow. For my worthy steward's family I made special provision. As to my private and ordinary style of living, I resolved that it should be simple and plain; but when genteel friends or strangers should visit my

lovely Seclusaval, I resolved to bring forth out of my stores the elegancies and luxuries that would make their visit agreeable for the style of my hospitality, as well as for the charms of the scenery.

Thus did I think to console my desolate heart. By the first of April, I again saw the unfolding verdure of my valley, promising a glorious summer display of all that is beautiful in external nature. The house was finished in a simple but remarkably neat and cleanly style of architecture. It was spacious enough to accommodate a large family. The water pipes were laid, and a clear fountain spouted in the yard, and ran sparkling to trace its mazy rounds about the slopes and terraces of the garden. The garden, now finished and furnished, began to bud and bloom with all the riches of a temperate climate. The meadow, sprinkled here and there with trees, single and in clumps, was clothed with a luxuriant sward of the deepest green. The pure waters of the lake were inhabited by a thousand sportive fishes, among which the trouts seemed to find peculiar joy in the cool pellucid element. The neighboring hills and dales differed from the meadow, only in being more shaded with the native forest trees, which had been selected to remain for their stately magnificence, their beautiful forms, or their rich verdure: but among these chosen remnants of the forest, a green turf grazed by flocks and herds began to cover and adorn the ground. Lawns here and there permitted the eye to penetrate into the bosom of the park, and afforded glimpses of beautiful groves and retreats, that enticed the imagination as much by what was hidden as by what was revealed.

A carriage road had been made to wind among the hills and dales towards the upper end of the valley. Passing by the Dusky Cascade before described, it pursued the dark glen that led up to the Blue Ridge; but presently took the point of a low ridge, that led it gradually up to the top of Craggyhead. From this road another led down into the valley on the north-eastern side of Craggyhead, and down that valley until it joined the road leading out of Seclusaval by the ravine.

Now, with all these varied sources of pleasure and amusement,—such choice gifts of nature, such sweet embellishments of art, such stores of all that my heart could covet of the productions of human industry; such a collection of books and of philosophical apparatus, and such specimens of the fine arts, as I had collected in Europe and America,—which if not very costly, were all that I desired—did I not feel happy? How many are there in this country, male and female, young and old, who fancy that the possessor of such abundant sources of enjoyment, must needs enjoy them and be satisfied. Or, if these alone could not satisfy; if the pleasures of society were wanting in my valley; still as I could easily allure what company I would into so charming a retreat—many perhaps among my readers will scarce believe me when I say, that after the excitement of unpacking, storing away and arranging my late acquisitions was over, and I had nothing to do but enjoy the beauties of Seclusaval and the goods that I had laid up for many years;—then did I begin to feel a degree of hopeless despondency, such as I had never felt since I came into the gold country. While I was laboring in my profession, and was full of duties and engagements, I was happy. The constant stimulus that kept

my faculties in a state of activity, left me no time to brood over real or imaginary evils. Now, when my work was done, my fortune made, and a home, lovelier than I had ever dreamed of in my most poetic moods, was mine, to have and to enjoy, according to my pleasure; I first began to feel a sense of weariness and satiety, then of loneliness; then, as the remembrance of one favorite object unattained, came up more frequently and took hold more deeply upon my mind, I became so sad and restless, that I saw no other means of alleviation, than to fly from my quiet paradise and mingle again with the turmoils of busy life. In fact, there was an aching void in my heart; I was alone, and *it is not good for man to be alone.*

Happily, there was one favorite enterprise of mine yet unaccomplished. The female academy was not yet supplied with teachers. A difficulty arose; and the trustees sent me a request to come down and aid them with my advice. The difficulty was this: The trustees had after much correspondence fixed their hearts on procuring the services of Mr. Danforth, who was teaching a female academy in New York, but thinking the climate too cold for his constitution, was desirous of obtaining a situation in the south. But as his qualifications were high, so, and justly so, were his terms. He required the guarantee of a specific sum for himself during one year, and for his music teacher during three years. He would not engage in a new institution and a strange country, without satisfactory evidence that a complete seminary under good management could be sustained, and this evidence was the guarantee. The trustees could obtain from the families of the country around sufficient engagements to guarantee Mr. Danforth's own salary, and that of his wife;—but the demand of one thousand dollars a year for the music teacher, seemed extravagant, and the patrons were not willing to join the trustees in securing it.

When I met with the trustees, I found them reluctantly brought to the conclusion, that they could not employ Mr. D., and must look out for another and probably an inferior teacher. When I read his letter prescribing the conditions, I noticed that he spoke in the highest terms of the lady who taught music in his school; he valued her services so highly, that he would not engage any where without her, nor without securing her an ample salary. He said that she was in no degree related to him or his family, and that she was a friendless and unfortunate lady, whom he would not forsake, and whose talents and accomplishments would adorn any station. I was struck with the noble sentiments expressed by Mr. Danforth, and conceived such an esteem for his character, that I promptly resolved to make myself responsible for the music teacher's salary.

"Gentlemen, (said I,) Mr. Danforth speaks like a man conscious of his deserts; and what is more, like a generous friend to the unfortunate. The high terms which he demands so peremptorily for the accomplished and unfortunate lady whom he has taken under his protection, are to me the strongest reasons why we should accept them. I take upon myself the guarantee of a thousand dollars annually, for three years, to the unfortunate lady:—I will go a step further, and promise the same lady three elegant suits of apparel, yearly, if she will come three times each year and play upon the instrument that stands silent in my lonely parlor: and

by way of assurance that the promise shall be fulfilled, I will send to Philadelphia to-morrow for the first three suits. Mr. Lappet sets out to-morrow for that city, and he shall be my agent. So write immediately to Mr. D., and tell him that his terms are accepted: but I forbid any mention of my name in the letter. The music teacher might feel some scruple, if she knew that a young bachelor had bidden so high for her. She might suspect that I have some design upon her."

The letter was written; and in three weeks an answer was received, announcing that Mr. D. and his teachers would set out in a few days for the academy.

This affair lightened the burden upon my heart for some days. I returned to Seclusaval, but soon began to droop again. I busied myself awhile in superintending some improvements, either not yet finished or newly undertaken. I visited all the new farms on my estate, especially the French colony in Soyevin, the name which I gave the valley devoted to vineyards and mulberry orchards. I found them doing well. Thus I made out to spend the month of April. But when May came, my melancholy increased. The opening charms of nature in Seclusaval served only to inspire melancholy thoughts. I was still alone; and *it is not good for man to be alone.* But what could I do? Though the Houris that adorn the fancied paradise of Mahomet had all smiled upon me, not one could have touched my heart, so long as the sweet miniature that I wore in my bosom, daily renewed my love for the peerless Judith Bensaddi—ever to be loved, and ever to be lamented.

I could stay at home no longer. I mounted my horse and rode again to the academy. The workmen were busily engaged in preparing it for the expected teachers. It could divert my melancholy but a day or two. I mounted and rode away, scarcely knowing whither I would go. Once I thought that I would visit the place where I first resided in Carolina; but when I reached the fork of the road leading to it, I felt too gloomy to appear among my acquaintances there: so I turned eastwardly and travelled on without object. I was flying from melancholy; but I carried the *evil* in my bosom, and fled in vain, because I could not fly from myself.

The third day of my travel from the academy was Saturday, and brought me at nightfall to an inn by the way-side, where a Mr. McTab, a Scotchman, furnished homely fare to travellers. The family had just arrived from a religious meeting, which was being held at a village seven miles beyond. The meeting was numerously attended on account of the presbytery, which was holding its sessions at the place. The Lord's Supper was to be administered the next day, and a great congregation was expected to attend. I was glad to hear of this meeting, and resolved at once to attend it. I felt myself in woful need of religious consolation; and hoped that by means of the holy communion, I might at last obtain rest for my weary soul.

I accompanied Mr. McTab and his family the next morning. I found the church in a grove on the outskirts of the village. Hundreds of horses were tied to the trees and fences. Although Divine service had begun, great numbers of loose persons were strolling about or gathered in groups wherever they could find logs or benches to sit on. Every door had a crowd about it, and every seat and every aisle in the church were

thronged with auditors. Mr. McTab's pew being near the front door, we made out to work our way to it; and by making some youngsters stand among our feet we were enabled to seat ourselves. I could not see the preacher, except occasionally through openings in a dense mass of heads and shoulders. The sermon was an edifying one, and prepared me for joining devoutly in the communion.

When the communion service began, there was considerable difficulty in passing through the crowded aisles to the table. Therefore I waited until the service was nearly over, and then accompanied Mr. McTab's family to the table. Finding it nearly full, they took the space on the one side, while I passed round to the other, and sat facing them. Two or three ladies still lacked seats. The elder in attendance touched my shoulder, that I might make room for them. By pressing closely together, we left a space that was scantily sufficient for the ladies. The one next to me was in deep mourning, and closely veiled. She was much affected after she sat down, and strove in vain to suppress her sobs and tears. She had been pressed so closely to my side, that I could feel the tremor of her nerves and the palpitation of her heart. Her tokens of distress excited my sympathy. Her bereavement was doubtless severe, and probably recent; whether she mourned for parent, or brother; or, what seemed more likely, for the companion of her bosom. As I did, so did she, and sorely too, need the consolations of religion. I raised my heart in supplication for the weeping mourner, as well as for myself.

When the bread was distributed, she seemed to be so absorbed by her devotions as not to observe it. I took a small piece from the plate, broke it and put one of the parts into her hand. She took it from me and ate it, as I did the other part. So, when the wine came round, I tasted first, and then gave her the cup, which she took from my hand. Every moment I felt a greater interest in this stranger, and repeatedly implored the Father of Mercies in her behalf. I knew not why, but I was conscious of a singularly tender sensation from the soft touch of her arm and side, involuntarily pressed against mine. The feeling had nothing in it incongruous to the sacredness of the hour and the place: it was a pure sympathy for the griefs of a breast, so gentle and so devout as I felt hers to be. I was no little gratified to perceive the soothing effect of the communion upon her heart, whose spasmodic action ceased; tears flowed no longer; but a holy calm seemed to have been breathed into her soul, as it was into mine, through faith in the expiatory sufferings that were signified by the sacred emblems of bread and wine. We felt the peace which the dying Son of God bequeathed to his disciples;—the spiritual peace, without which the soul of man is but a fountain of bitter waters.

When we rose from the table, the ladies at my side preceded me in retiring. The mourning lady then appeared to be of the middle stature, and she wore a bonnet somewhat different from any others that I noticed. These were the only observations that I could make, before we parted in the crowd and I lost sight of her. I felt a natural curiosity to know who she was, but had no means of learning, as I could not describe her to another person with any distinctness.

During the short intermission that preceded the after-

noon service, I walked out to meditate in the woods. I felt a delightful glow of spiritual comfort. A fountain, lately closed, had been opened again by the devotional exercises of the day. I no longer considered myself a solitary, unconnected being. If I lacked one tie, of all earthly ties the closest and dearest—if, so far, I was severed from that without which human nature and human happiness are incomplete—I now felt the drawing of other bonds which bound me to many hearts, even of strangers, around the communion table. I was still a member of the human family:—I was also a member of the spiritual family, gathered by him who came down from heaven, into a peculiar brotherhood—a brotherhood of renewed hearts, which by prayer draw sweet effluences of love from the common fountain of Deity, ever flowing from its exhaustless source to purify and to console. Alas! that so many should never seek these living waters. Alas! that so many should infuse the bitterness of their own hearts into these healing streams, and call the polluted mixture religion!

The afternoon service was begun, before I returned to the church. The sermon was an excellent one; chastely and beautifully eloquent, and strictly appropriate to the occasion, but delivered with less vehemence of manner than is usual in the south. The people generally seemed to listen without interest to calm and lucid exposition, logical argument and mild persuasion. The popular mind is yet too uncultivated to relish such refined oratory. I asked Mr. McTab who this preacher was. "A stranger frae the north, (said he,) ganging awa' south." Altogether the services of the day had a surprising effect on my mind. I left the church, renewed, brightened, and sanctified, at least for the time. I thanked Divine Providence for directing my wandering steps to this presbyterial meeting. I could now go home refreshed.

As I pressed through the crowd to get my horse, I happened to hear a couple of plainly dressed old country women, in earnest conversation. Their Scottish dialect first struck my attention; but the subject of their colloquy soon awakened all my curiosity. "Aweel now, Mrs. McGraw, I wud na mind that a bawbee. Ye'll agree that a Jewess may be a gude christian, when she is converted." "Why, yes, Mrs. McCracken, I grant ye, if she be truly and thoroughly regenerate: but that is nae easily done wi' ane o' them hardened Jews, Mrs. McCracken. And then I wud na mind her being a private christian, like, but I unnerstan that she is a teacher, a sort o' public character, like,—ye know, Mrs. McCracken. Now just think—wud ye like to put your daughter unner a Judaizing teacher? Ye know how the Apostle warns us agin sic Judaizing teachers. Think o' that, Mrs. McCracken."

I had stopped at the word Jewess, which struck me like a thunder-clap, not now to frighten, but to rouse me. I waited for some further development of the subject of conversation. But Mrs. McCracken's husband called her off suddenly. "Good e'en, Mrs. McGraw," said Mrs. McCracken. "Good e'en, Mrs. McCracken," said Mrs. McGraw: and ere I could address either Mrs. McCracken or Mrs. McGraw, they had mingled with the crowd and disappeared.

Had I met an acquaintance then, I would have inquired, if they had a converted Jewess for a teacher in their neighborhood. But a few moments reflection

made me conclude, that it was a matter of no consequence to me. Jewesses were found half the world over; and a converted Jewess was no such rarity, that the mention of one should make me fancy that my lost Judith had risen from the grave.

I returned to Mr. McTab's on my way home. The next morning, while conversing with the hostess on the occurrences of the meeting, I was about to ask her a question suggested by the allusions of the old women at the church, when she anticipated me by asking, if I knew that the lady in mourning, who sat by my side at the communion table, was a converted Jewess. I started, turned pale,—and almost breathless, answered, "No." "Aweel now, she was;—but ye need na be frightened. I trust that she is truly regenerate, and I dinna think that we should feel sic antipathy to ony christian, though she be o' Jewish bluid." "I feel no antipathy, Mrs. McTab. But what you tell me is very surprising. Does she reside in this country?" "Na, she is a stranger amang us. She came till the presbytery on Saturday with the preacher that ye heard in the afternoon. They are ganging south, I hear, till teach a seminary." "Do you know the preacher's name?" "Aye, I heard it; I think they ca' him Donfort, or the like o' that." "Danforth, perhaps." "Aye, aye, Donfurth, precessely." "Is the Jewish lady his wife?" I asked in great trepidation. "Na, na; his wife sat next till the Jewess, in white claes. They say that the Jewish convert is his music teacher—though I canna say what sort o' music she teaches—some o' their ungadly whuslin liltis, I fear,—for they dinna teach psalmody in their academies, I unnerstan—the mair is the pity." "His music teacher! Did you hear her name, Mrs. McTab?" "Her name? O aye, I heard one tell it till anither: but it is sic a strange name—I canna remember—but it sounded like a Scriptur name too—Beersheba—or Belshazzar—Ach! na—it was na jist a Scriptur name:—Benhadad—it was amaiist like Benhadad—but I canna forgather it." "Was it Bensaddi?" I asked with almost breathless anxiety. "Bainsawdi! A weel now I think that was it:—But I canna tell: I think now it was mair like Baalsamen." "Try to remember, Mrs. McTab—do remember, I beg you." "Ye seem to hae a curiosity about it, Mr. Garamie: Ah, here is Jenny:—Jenny, dear, did ye hear the Jewish laddy's name at the kirk yestr'een?" "Nae, mither; I only heard her called the Jewish music teacher."

This was all that I could learn of the family. Though unsatisfactory, it was sufficient to kindle again some trembling hope—at least it stirred up a thorny impatience to learn who this music teacher was. She was a Jewess; she was a mourner; I had caused her to come to our academy; and at the communion table, I had felt that there was a tender and mysterious sympathy between our souls. These alone were points of deep interest—and then the name! Oh how I longed to know the exact form of it! I was cautious, since Miss Bersati's case had disappointed me, not to trust in resemblances.

Breakfast had been just finished, and the hostler was saddling my steed, when a two-horse barouche passed by towards the west. I stepped to the door and saw that the hind-seat was occupied by two ladies, one in white, the other in black, with the identical bonnet of the lady in whom I now felt so intense an interest. In

five minutes I was on my horse, and ere I was aware I found that I had urged him to a gallop. When I overtook them, a short turn in the road brought the side of the barouche into view. Mr. Danforth sat on the fore-seat as driver; but the lady in black was so closely veiled, and so covered from my sight by the other lady, that I could make no discovery. I could easily have passed and turned to look at the faces of the party, but I would not risk a recognition of such importance in such circumstances.

Supposing that they must have taken an early breakfast and would of course stop for dinner, I laid a scheme to gain my end at the house where they would stop. The only convenient house for the purpose, I remembered to be in a rocky vale, where a mill, a store and a smith shop, made a sort of village. When Mr. Danforth stopped the barouche at a brook to let the horses drink, I rode past, holding my umbrella so as to conceal my face from the ladies. I then dashed on, and arrived at the tavern nearly an hour earlier than the barouche.

Telling the landlady that I did not "feel well," (a true saying,) I called for a private room that I might lie down. She showed me first a back room, which I rejected; then she offered me a room up stairs, which I declined also. She looked with curiosity into my face, to see if my pericranium was sound. I asked if she had not a bed-room at the end of the front piazza. "Yes, (said she,) but the sun makes it too warm, at this time of day." "Give me that, madam, it suits me exactly." She gave me another scrutinizing glance, and then led the way. It was within thirty feet of the gate, and had a small window, opening towards the road. Requesting to have some toast and tea prepared, I lay down on the bed. But I seemed to lie on thorns. I got up and prepared the window, by having the sash up and the curtain down, so as to leave a small opening adapted to my scheme of peeping—for I desired to see before I was seen. Meditating on the possibility that this might be indeed my Judith, I considered what I should do in case that it was herself. She was probably a widow, as her deep mourning and sorrow indicated a bereavement more recent than the death of her father thirteen months before. I conceived the outlines of a plan of action; and was absorbed in the subject, when I heard the sound of wheels. My heart fluttered; in great trepidation I took my seat by the window, just as the vehicle stopped.

Mr. Danforth dismounted, and hearing that the party could have dinner, he handed out first the lady in white, who walked straightway into the house. Then he handed out the lady in black, who, as she entered the gate, partially drew aside her veil. A soft dark eye, and part of a lovely face, made me almost faint with fearful joy. Mr. Danforth spoke to her: "How do you feel now, Miss Judith?" "Better every way than I have felt these many days," was the answer; and as she spoke, she turned her face so that every feature was distinctly seen.

I heard—I saw—it was—it was beyond a doubt, my Judith Bensaddi! Her softly beaming eyes, her sweet countenance, somewhat pale and overcast with years of sorrow, but yet all sweet and lovely; the dulcet voice—the name—all agreed. I must have believed, though I had seen her laid in the grave. She lived—she looked—she spoke—she was *Miss Judith*, not Mrs. Brannigan.

Yesterday she sat by my side a devout christian. I then felt the sweet influence of her presence—as if Heaven designed that our reunion should commence at the holy place where we mingled pious vows, ate of the same consecrated bread, and drank of the same hallowed cup. Now, when all was evident, and my fearful hope was changed to certainty, I sank down upon the floor, smitten almost to death with excessive joy.

Soon after, a servant brought in my tea and toast. He found me apparently very ill,—really ill with joy. I had crawled into the bed; now I attempted to rise and go to the table, but stumbled and fell. I made out to get on a chair and drink a dish of tea, which revived me; but I told the servant to take out the things, as I had no appetite for food. The servant's report of my illness brought in the hostess, who asked if I would have a physician sent for. I told her that I was getting over the fit, and could do without medicine. "There is a strange gentleman here who knows something of physic, (said she,)—he desired me to ask if he could be of any service." "I shall be pleased to see him,"—was my reply. She left me; and the next moment Mr. Danforth entered the room. I told him that my illness was going off and needed no further treatment; but that I wished to have a few minutes' private conversation with him. He cheerfully assented. I locked the door, and after some introductory inquiries and remarks, requested him to tell me what he knew of the late history of his music teacher. "My reason for asking, (said I,) is, that I once knew the lady and was much attached to her; I recognised her as she came into the house, and was astonished to see her; because on a visit to London, nine months ago, I was informed that she and her father had died near the same time in France."

"Of course (said Mr. D.) you were misinformed respecting her death. I presume that it was her sister, Mrs. Brannigan, whose death you heard of. I will relate to you how I came to be acquainted with her. Bad health led me and my wife to spend the winter before the last in the south of France. We resided some months at Clairfont, a pleasant healthy village near Bordeaux. We chose that village, because it was inhabited by protestants, and was a place of frequent resort for invalids, especially English invalids. Here we became acquainted with Miss Bensaddi, who was attending on her sick father and sister. An English family in the village had known the Bensaddis in their prosperous days. They spoke in such exalted terms of Miss Judith, and compassionated her afflictions to such a degree, that I resolved to seek her acquaintance. Her assiduous attendance on her father and sister confined her almost constantly to the house; but having gained an introduction, we assisted her in nursing the sick, and soon gained her warm friendship, and what is more, acquired such knowledge of her modest virtues and talents, that we felt loathe to part with her. After the death of her father and sister, which she deeply mourned, but bore with pious submission, we proposed that she should come with us to America. We knew that she had nobly surrendered her own large fortune to pay her father's debts,—that she was the only survivor of the family, and that she felt reluctant to go back to London, where nothing but melancholy reminiscences awaited her. I assured her, that in America her talents

and acquirements would gain her an ample support. She replied that her nearest and best friend resided in Boston, and that she would thankfully accept our kind protection, until she could meet with that friend. She declared her intention to devote herself to teaching, that she might gain an honest living, and be useful to her fellow creatures. We embarked at Bordeaux and landed in New York on the fifteenth of June."

"Did you? (said I;) then I was not mistaken, when I thought that I saw Miss Judith on the deck of a French ship, which our packet met in the narrows on that very day. I was then on my way to London." "You remind me, (said Mr. D.,) of a circumstance which then occurred. We observed that Judith looked intently at the passengers on a ship that we passed in the narrows; and at last burst into tears. When we asked what was the matter, she said that she recognised a dear friend on that ship, one whom she had never expected to see again, and probably had now seen for the last time. She was obviously reluctant to mention particulars; so we did not press her, and she never spoke of the circumstance again. You, I presume, are that friend."

"In New York, I again resumed the school which I had taught. Miss Bensaddi addressed a letter to her Boston friend, Mr. Von Caleb; after long delay, she received a letter from another gentleman there, a friend of his, saying that Mr. Von Caleb had gone, just a week before her letter arrived, to reside again in London: that being left in charge of his affairs at Boston, he had opened her letter. He apologised that pressing circumstances prevented him from affording her any aid, but that she could write to her cousin in London, if she would. She desired no aid except friendly advice; so she wrote no more; but accepted my offer of employment as music teacher in my female seminary."

"She lived very retired in my family,—seemed indisposed to mixed society;—but in private, with my family and a few friends, she was a delightful associate; while her extraordinary skill and assiduity as a teacher, were of great advantage to my school and to every pupil that she taught."

"But a confined city life did not suit her natural taste and constitution. Though as cheerful as such accumulated misfortunes would permit any one to be, she evidently drooped and pined away; until about the middle of autumn, when we made an excursion up the Hudson, visited West Point, the Kattskills and Niagara. This tour had a wonderful effect on her health and spirits. She was inexpressibly delighted with the scenery on our route, and showed that a country life could alone give her continued health and pleasure. On her account, therefore, as much as my own, I was gratified with the prospect of a residence in upper Carolina, where the climate will doubtless suit me and my wife, and the vicinity of the mountains will suit the taste of Miss Bensaddi. I can see that her health and spirits are already improved by the mere expectation of living near the mountains."

"I hope that she will reside in the midst of them before long," said I, under a sudden impulse. Mr. D. looked surprised, and waited for an explanation. But as yet I gave him none.

"Do me the favor, (said I,) to keep this conversation a secret, for the present. I wish to remain unknown to

Miss Bensaddi for a short time. I reside but twenty miles from the academy, and will see you there in a few days. I must also at present withhold my name from you, until I can make it known with evidence of its respectability. After he had given me the promise of secrecy, I asked him if he had heard of Miss Judith's being engaged to marry a gentleman in England, about three years before. He had heard it from the English family in France, who could, however, give no other account of the matter than this, that the gentleman had died without consummating the marriage. Judith had never mentioned to them any thing respecting it. Though communicative on all other subjects, she had never alluded to any love affair in her past history.

Mr. Danforth being summoned to dinner, I took advantage of the opportunity to make my escape, unobserved by the party, and rode post-haste to the academy.

CHAPTER VI.

THE SUMMER FESTIVAL.

I arrived at the academy a day sooner than the party of teachers. I hastily visited the trustees,—told them that Mr. Danforth would arrive the next evening,—and after suggesting a few particulars of my former love affair with the music teacher, I begged them to avoid all mention of me or of Seclusaval, in the presence of the teachers, until I was prepared to make myself known. I besought them to humor my whim in this matter, and to prevent, if possible, all knowledge on the part of the music teacher, that such a person as myself existed in the country. In due time I would make myself known; and would soon communicate to them, privately, the scheme which I had in my head. They cheerfully pledged themselves to what I requested. To prevent untimely communications from reaching the ears of the teachers, Mr. Landon, one of the trustees, took his carriage in the morning to meet them on the way, and to conduct them by an unfrequented road to his house in a secluded valley of the neighborhood.

I hastened to Seclusaval and immediately set my steward and tenants to work in a multitude of preparations for a summer festival, which I told them we were to have on the first of June in Seclusaval. I astonished my people with the multitude of my orders, and the eagerness of all my words and actions. They saw that new life had somehow been infused into me, and wondered how I came to be so revived all of a sudden. I told Baylor to collect a dozen laborers at once, and go to smoothing off and beautifying Seclusaval to the utmost. "Make the valley shine," said I. "It shall be done, sir." "Get also some carpenters to make temporary buildings for the festival; keep the saw-mill agoing to furnish materials, and let us have a glorious festival." "Yes, sir, it shall be glorious; we are able to do it, and it shall be done, sir." That was enough; I knew that when Baylor undertook to do it, it would be done.

I next despatched letters and agents in various directions, in furtherance of my scheme; and having thus put things in motion at home, I returned to the neighborhood of the academy, and stopped at the house of

Mr. Wilson, pastor of the church. He was an old friend and college-mate, and had been lately settled in the neighborhood through my influence. I communicated my scheme to him. He was pleased with it, and offered me all the aid in his power. He despatched his barouche to Mr. Landon's to bring over Mr. Danforth. The distance was only two miles; Mr. D. soon arrived and was introduced to me; we smiled and shook hands cordially. I now unfolded my scheme of a summer festival, to which I designed to invite all the country round, and among the rest his music teacher. To carry out my views it was needful, on the one hand, that Judith should know nothing about them, until the proper moment, and should be for a while kept in ignorance of my being in the country; and on the other hand, that she should be prepared for the occasion, and that I should know her present feelings in regard to me; lest, after all, the scheme should turn out to be a painful surprise to her, and a grievous disappointment to me.

After detailing the history of my love affair with Judith, and explaining my object in getting up a summer festival, Mr. Wilson and Mr. Danforth readily undertook the office of preparing Judith for her part in the celebration, without letting her know any thing of the matter. Having visited other friends in the neighborhood, and imparted to them more or less of my scheme of a festival, I returned to Seclusaval, and was busy as a bee in preparations for the first of June.

In a few days I received the following letter from Mr. Wilson:

MAY 15TH, 1824.

My Dear G.—I now inform you how I have executed the office which you assigned to me. Two days after you left us, I went with my barouche to bring Miss Bensaddi to my house on a visit. While at Mr. Landon's, I took occasion to mention in her hearing, that I was a native of the great valley of Virginia, and that I had received my education at Washington college. I alluded to the fine scenery in Rockbridge, especially the Natural Bridge and the House Mountain, which I had visited with a party of fellow students, and had seen from its top the most splendid sun rise in the world. The moment when I touched on this theme, I saw that she was intensely interested. Her fine dark eyes brightened immediately, as she fixed them upon me with breathless attention. When I paused, she gave an involuntary sigh and gradually sinking her head to a meditative posture, seemed to be absorbed in thought. Finding her indisposed to ask questions, I inquired if she was fond of mountain scenery. She looked up with animation, and for a minute or two poured forth an eloquent expression of her delight in rural scenes, especially in mountainous regions, and how much better she loved to dwell in this land of valleys and mountains than in a city. "Perhaps, (said I,) you would like to read a description of the House Mountain, written by a dear friend of mine, a native of Rockbridge, who is as enthusiastic an admirer of mountain scenery as you are." "Yes, (said she,) I should be much gratified to read it." Her voice had a slight tremor as she spoke, and the color came and went upon her cheek. "Well, (said I,) I have a copy of it at home, that I will show you this evening."

On the way I alluded to you again without naming you. "This friend of mine, (said I,) settled in another

part of Carolina, two or three years ago, and soon acquired reputation at the bar. But his success has not made him happy. About four years ago he fixed his heart on a young lady, but by some unfortunate accident he lost her. The wound of that disappointment seems to be incurable, unless Divine Providence should by some extraordinary means restore him his lost bride."

When Judith heard these words, she trembled and turned deadly pale, but said nothing. She seemed afraid to trust herself to speak, lest she should betray herself.

In the evening, when I and Miss Bensaddi were alone, I handed her the manuscript. When she read the title, and saw your name annexed to it, she could refrain no longer, but started up to leave the room that she might conceal her agitation. Before reaching the door, her strength failed, and dropping on a chair, she began to sob and weep. "My dear Miss Bensaddi, (said I,) what is the matter?" "Oh, sir, I know not what to say; my feelings overcome me." "Did you see any thing in the manuscript to affect you so deeply?" "Oh yes—I cannot conceal it from you:—that name—is the name of a friend who was in the ship with me, when my dear brother was lost in the sea. May I rely on you not to tell how much I was affected on seeing that friend's name once more." "Miss Judith, that friend of yours and mine has told me the circumstances of that disastrous voyage. He told me also, that the young lady who was then so unfortunate, had won his heart wholly and forever. Pardon me, Miss B., for having taken this course designedly to bring about an explanation of your present feelings towards Mr. Garamé. I had no doubt that you were the long lost object of his affections. I desire to know whether your feelings are as unchanged as his. I will now inform you, that after your return to London, he wrote you two letters in succession, according to the agreement between you; and that he feared from your silence some change of affection towards him, or he would have gone himself to London. At last he received your letter, announcing your expected marriage. This gave him the first intimation that his letters had not reached you. For this he is a mourner still."

When I spoke of the letters, she seemed at first to be filled with astonishment, and then she broke out into sobs and exclamations. After a little, I said—"Now, Miss B., I think you must see the propriety of letting me open a communication between Mr. G. and yourself. You are both unmarried—your mutual affection is unchanged—or am I mistaken in supposing that your affection for him is unchanged?" After a violent struggle of a few moments, she wrung her hands and exclaimed, "Oh, sir, I know not what to say. I have betrayed my feelings too plainly. My heart is not changed towards Mr. G. But it becomes not me to profess love for a gentleman, to whose continued affection I have no claim nor right. I am unworthy of him, and I beg that you will not disturb him with any information concerning one who deserves no further notice from him."

"Miss Judith, you accuse yourself so bitterly, that I must claim the privilege of being your judge: if you will state the case to me, I promise to give an impartial opinion, according to the facts. If I think your self-accusation just, and that you deserve no further notice

from Mr. G., then I will let the matter drop where it is." She then gave me a full statement, of which I have room for a few particulars only.

The English gentleman whom she had consented to marry, after she despaired of hearing from you, was Mr. Wycherly, a pious and eloquent clergyman; who after he had overcome her remaining difficulties respecting the christian religion, accompanied her to London from the lakes of Cumberland, and greatly aided in persuading her father to consent to her baptism. She received this rite from his hands. In the warmth of her christian joy, and her gratitude to so worthy and amiable a gentleman, she listened to his proposals of marriage; and mistaking the real state of her heart, yielded her consent. When she sat down, a few days afterwards, to write you the letter, she began to discover what a deep hold you still had upon her affections. Though hopeless of ever seeing you again, she found that her feeling of love towards you, was of a different kind from that which she felt towards the good clergyman, who deserved her warmest gratitude and esteem, but who had not awakened in her the tender sentiment of personal attachment that she still felt for you.

A few days after she had sent you the letter, she frankly told Mr. Wycherly the state of her heart, and requested a postponement of the marriage. He assented, and returned to his residence in Cumberland. The state of his health was rather alarming, before this time. Symptoms of consumption had already made his marriage of doubtful expediency. The steady progress of the disease, soon put marriage out of the question. Learning the desperate state of his health, she went and did for him, as a tender and affectionate nurse, all that in any circumstances she could have done. She showed me, the next day, a letter of thanks written by Mr. Wycherly's mother after his decease, in which her assiduous attentions were warmly acknowledged.

"Now, (said Miss Bensaddi, when she had concluded her narrative,) you see that I was false to Mr. Garamé; because I despaired of his love and accepted another offer, when I ought to have trusted that he was only unfortunate, not changed. And I was false to Mr. Wycherly; because I made him a promise which I could not fulfil, without doing violence to my feelings."

"Miss Judith, (said I,) neither you nor Mr. Garamé were false, but providentially hindered from knowing each other's fidelity. Your promise to Mr. Wycherly was made in sincerity, but under an erroneous impression respecting the state of your heart, and you did your duty honestly in confessing the truth to him when you discovered it. And now, since the design of Providence is manifest, in ordering that you and Mr. Garamé should once more be brought together, with hearts devoted to each other, I put it to your conscience to say, whether you can rightfully refuse to let me inform Mr. G. of the exact state of the case. Can you thus make an over-scrupulous delicacy forever separate two devoted hearts, and can you run counter to the evident leadings of Divine Providence?" "That (said she) is a strong view of the case; I feel that it ought to be seriously considered." "The hand of God is more evident in this matter (said I) than you are yet aware of. This academy owes its erection to Mr. Garamé's exertions; and then without his zealous efforts, Mr. Danforth's terms could not have been complied

with, especially in relation to the music teacher; so that he was undesignedly the cause of your coming here, where, through an extraordinary combination of events, you may again meet and renew the tender relations which were so unfortunately broken off."

She was greatly surprised and affected with this information, and exclaimed, "Yes, it is the hand of God. I dare not now refuse your request. But I beseech you to communicate only so much to Mr. G., as will leave him perfectly free to act as his present inclination may prompt. Do not, I beseech you, expose every thing that I have confessed to you. Let him not think that I consider myself worthy of his love; or that I have any sort of claim or expectation, that should induce him to do any thing not perfectly agreeable to his wish, and likely to promote his happiness. I trust to your kindness and discretion, to manage the matter so as not to involve either of us in a disagreeable predicament." I promised to act with a single regard to the honor and happiness of both parties, and finally got her persuaded to leave the whole affair to the unlimited discretion of myself and Mr. Danforth, without whose consent I promised to do nothing. I have conferred with him on the subject, and we agree that you ought to know the whole truth, as I have stated it.

Now your way is clear to prosecute your scheme, and I trust that God will bring it to a happy issue.

Yours, &c.

If ever a man was delirious with joy, then was I, when I read this letter in my library; I danced over the floor like one intoxicated. My final arrangements were put in train immediately. I made a stealthy visit to my friends below, and settled with them the scheme and order of proceedings at the summer festival. I enjoined upon them to keep the whole affair, and even the existence of Seclusaval and my presence in the country, still profoundly secret from Judith. My design was by all possible means to make it a happy day of surprises to that dear child of sorrow. On the 30th day of May, the preparations were complete at Seclusaval, and a letter from my managers below, informed me that all was right in that quarter.

On the last of May, Mr. Landon, who had heretofore kept Judith very much secluded, took her in his carriage with his wife and daughter and Miss Claymore, to visit the mountains; he and the brother of Miss Claymore being on horseback. The weather was fine, and the whole party in good spirits. Judith had gone through such dark years of affliction, that sober cheerfulness was all that she could usually enjoy. The prospect of a trip to the wild mountains, had raised her a degree above her usual cheerfulness, and her mind was prepared to derive pleasure from a ramble so congenial with her taste.

They pursued the valley that leads to Seclusaval; but when they came to the ravine, they turned off to the right, and ascended the vale at the north-eastern side of Craggyhead. At a new farm in this valley, they began to ascend the mountain by a winding road, not good but practicable; a little before sunset they reached a farm house, romantically situated high up on the side of Craggyhead, where a broad terrace of the mountain spread out from the base of the cliffs which supported the castle-shaped summit. Here they found the new white cottage all swept and garnished for their

reception. There was a stir of cookery in the kitchen, and a tidiness of apparel among the cottager's household, as if they expected company. When the party stopped at the gate, they were received in the most friendly manner. On alighting and looking round from beneath some tall trees in the yard, they were detained for some time by the magnificent scenery before them. The last rays of the setting sun gilded the mountain tops, while the deep vales were reposing in the gathering shades of twilight. They contemplated the wild and rugged mountains on the north of Craggyhead, and the less rude features of the eastern landscape; they looked down into the half seen vales and glens about this side of the mountain, until they were called to partake of an excellent supper. After supper they went out to enjoy the soft evening air; they found the moon up in the east, shedding her silver radiance upon the green woods and the gray rocks; diffusing over the vast landscape the dreamy softness of hue, which made Judith in her enthusiasm call the scene before her "the land of the shadow of life." When they had feasted their imaginations awhile on the nocturnal glories of the landscape, they went to bed in small but neat apartments, which seemed to have been furnished specially for the accommodation of such a party.

They rose an hour before the dawn, and now saw the moonlight thrown back from the west upon the opposite sides of the mountains, and shining into a ravine near the house. Through this ravine they were to ascend to the top of Craggyhead by a rough road, but still a safe one for a carriage, to a little fountain at the head of the ravine. From the fountain they made their way on foot, and stood on the table rock of the summit, just as the eastern horizon began to glimmer with the first hues of Aurora, and the moon as she went down was peeping back through the pines of the Blue Ridge. Every valley around Craggyhead was buried deeply in fog, and every high mountain stood forth, dusky and desolate, above the misty sea. It was the House Mountain scene varied. Judith recognised the resemblance, and seemed entranced. "On a rock, whose haughty brow frowned," not "o'er old Conway's foaming flood," but over the lovely vale of Seclusa, was Judith stationed. Her soul of liveliest sensibility kindled and glowed with ethereal animation as she looked, first this way, then that way, generally with silent admiration. Now and then her feelings broke forth in expressions such as these, "What a glorious vision!" "Down there! See how softly and silently the mist reposes in yon valley; 'tis like the sea of oblivion." "Oh, the sun! Now the mountain tops begin to glow! How splendid are the green forests newly gilt with morning rays!" "How beautifully yon cliff of rocks over the valley appears with its crown of dark green pines." "Behold, Mrs. Landon, the valley down here begins to show itself! That hill top down yonder—see how its beautiful trees stand out over the mist! How green and fresh the ground looks under the trees. Yonder too is a white cottage, in a nook under the rocks, with a little field and fruit trees about it. Oh! look down this glen under our feet, how wild and thickly set with trees!—and yon hill at the mouth of the glen—what a beautiful park, and a handsome house at the brow of the hill! Lend me your telescope, Mr. Landon—I want to see that beautiful garden on the hill

side;—I see roses blooming in the garden; and walks and shrubberies, and every thing beautiful. There is a green meadow too, just unveiled; ornamented with trees. Let me see! The meadow is almost covered with bloom. How lovely! Miss Claymore, what is that spreading out so smoothly by the meadow side? It looks like water. It is water—a fine lake! with a boat moving over it!" Thus she noticed one object after another, as each was exposed to view. Finally, after the fog had disappeared, and the whole valley presented its enchanting landscapes, she surveyed it a while in silence, and then asked in a sort of ecstasy, if this were a real scene in the mountains, or only a dream. Being presently assured that all was real, she declared it to be the most delightful place in the world, and congratulated herself that it was sufficiently near the academy to admit of her coming to look at it, once or twice a year.

About sunrise the party had been joined by Mr. and Mrs. Danforth, and two or three other friends. At seven o'clock, they were all invited to come down to the spring at the foot of the precipice, and take breakfast. They found hot coffee and all the requisites of a good morning's repast. At eight o'clock they mounted their vehicles, and began to descend by the road which leads down into the upper glen of Seclusaval. They frequently stopped by the way to enjoy the new views which successively presented themselves. When they reached the bottom of the glen, they found themselves so enveloped with the shade of trees and rocks, that they seemed to be cut off from all that they had seen, and indeed from all the visible and the living world of sunshine. They stopped awhile at the Dusky Cascade, and admired its romantic wildness. Pursuing their way, they wound along the southern border of the valley, till they suddenly emerged from dense shades and thickets in all the disorderly luxuriance of nature, into a grassy lawn, from which they caught glimpses here and there of wider lawns, and of hills and mountains—but only glimpses enough to excite curiosity, until they suddenly reached the brow of a turfy hill, crowned with a tall open grove. Here a general view of the more improved parts of the valley suddenly burst upon the sight, and drew an exclamation of delight from Judith and several of her companions. The garden and hill of Glenview were seen to great advantage across the low grounds; on the right were the lake and meadow; above was the deep glen of Craggyhead leading the eye up to the towering summit, from which they had looked down upon the valley. Descending the hill, they passed over by the head of the lake, and wound up by the western side of Glenview, into its beautiful park, through which they came forward again to the house on its brow, and here again they stopped and contemplated with admiration the best of all the views of Seclusaval, now shining in its glory, as Baylor said it should.

Here some new appearances began to attract attention. In the mouth of the glen below the garden, half concealed by a grove of tall trees, were two large structures newly erected to accommodate the numerous company invited to the festival. The one was a large shed supported by framed pillars, and set round closely with green boughs to exclude the sun and wind. This was furnished with two tables, each a hundred feet long;

and in the rear, the smoke and the bustle of cookery showed that the tables were to be used. The other building, though a temporary structure, was formed with more regard to beauty of appearance; it was designed for such in-door exercises and amusements, as might be adapted to the occasion. I shall notice this building again. It was called the Summer Hall.

Already had several parties of guests arrived, and others were seen coming up by the lake side, in carriages, on horses, and on foot, all in gay attire, and with a hilarity of movement indicating that they were pleased and seeking pleasure. When Judith observed these appearances, she inquired whether Mr. Baylor (whom alone she had heard spoken of as residing here,) had invited company to Seclusaval.

"Miss Judith, pardon us (said Mr. Landon,) for not having told you, that there is to be a summer festival here to-day. We were invited to partake of it, and the rest of us agreed not to tell you, until you saw the valley, because we wished to give you an agreeable surprise." "All that I have seen to-day, (said she,) has been so delightfully surprising, that half the time I can scarcely believe my own senses, but suspect that I am dreaming; every thing bears so much the appearance of enchantment." "There is a sort of enchantment going on here, (said Mr. L.) The worthy proprietor of this valley, has converted it into an enchanting place; and I should not be surprised if some of us should undergo strange transformations to-day. I think that you are already so much under the magic influence, that you may ere night be converted into something that you think not of." "If the transformation you speak of (said Judith playfully,) do not dissolve the sweet visions of this valley, I shall not suffer much." "No fear, Miss Judith, (said Mr. L., in the same sportive strain,) I think the enchanter is a benevolent one, and means only to give us pleasure; and if you should undergo a change, the new form of your being will doubtless be a happy one."

Now Mr. Baylor came out to the great tulip tree under which they stood, and invited them into the house. He acted the landlord on this occasion with a hearty blunt sincerity, which made up for a little want of refinement in the manner of his kindness. His wife and daughter did the honors of the house. The parlor and library had been fitted up handsomely with my holiday furniture.

When the party entered the parlor, they found several acquaintances already there. Judith was asked to play on the piano. She played and sang three pieces of a cheerful character, and in the best style of her unrivalled execution. She pronounced the instrument to be one of the most sweetly-toned that she had ever played upon. I owed her a dress for playing in my house—and I did not forget to pay it in due time.

The company were now joined by Mr. Wilson, the pastor, who whispered a word in Judith's ear, and then took her through the hall into the library, where he handed her a letter which will explain itself. She began to tremble as soon as she looked at the inside. She read as follows:

"My beloved Judith,—Words cannot express my joy to know that you are in Carolina—unmarried—and, as my friend thinks, with a heart unchanged towards me. He informed me by what means he had extracted

the dear confession from you. He has also given me the outlines of your late history. Oh how my heart bled to think of the sorrows of my long lost Judith! But you were not to blame for despairing of my love, when I was so unfortunate in the transmission of my letters. But thrice happy shall I now be, if you will permit me to see you, to renew my suit in person, to press my long-wept-for bride to my panting bosom once more, and to solicit a speedy consummation of my ardent wish to call you mine by every holy tie, and then to do what man can do to secure us from future separation and change for life. I am present at this summer festival, and wait your permission for an interview.

W. G."

Here was a new surprise—she had not suspected that I was in the neighborhood. She was affected to tears by the intelligence; but they were not tears of grief. She handed the letter to Mr. Wilson. "Shall I read it, Miss Bensaddi?" "If you please; I am so bewildered with surprises and unexpected delights to-day, that I cannot trust my own judgment. Advise me, my friend, respecting the subject of that letter." Giving the letter a hasty glance, he said, "Miss Judith, you now have from himself the ardent avowal of unchanged affection. You see the impatience of his feelings, and the fear that delay may interpose some obstacle to his wishes. But before I advise you what to answer him, I must know the exact state of your heart. Answer me unreservedly, my dear friend. Do you love Mr. G. with such affection as would, in ordinary circumstances, make you freely consent to marry him?" "I must in candor confess that I do—my affection for Mr. G. is entire—he still possesses all my heart." "Well, then, as the mutual friend and confidant of both parties, I give you this advice: That you tempt not, by needless delay, the Benign Providence which now smiles upon your destiny. Open your heart at once to Mr. G., as he has done to you; and when he pleads for a speedy consummation of your union, yield, my friend—make no delay beyond what duty and necessity may seem to require. Thwart not the ardent wish of one who is worthy of you and seeks only your happiness; and be not inattentive to the hand of God so manifestly pointing out the way to this happy marriage." "Yes, (said she, with deep emotion,) I see more and more the evident tokens of God's will in the present extraordinary crisis. I would be blind to my own good, and most wickedly ungrateful to my Divine Benefactor, if I could yield now to a prudish delicacy, rather than to the force of such extraordinary and Divinely ordered circumstances. Oh, my friend, how grateful should I be to the kind Parent of all—how much do I need, at this critical moment, His good spirit to guide my actions. Pray and give thanks for me, my dear friend." She fell instantly upon her knees. Mr. D. also prostrated himself, and performed in a low voice the devotional exercise that she requested.

When this was concluded, Judith appeared calmer, and consented to let Mr. D. inform me that she was prepared for the interview. He came out, and locking after him the door that opened into the hall, he gave me the signal, and I passed into the library through another room. I had denied myself an interview with Judith, during three weeks, that I might now enjoy it, and make her enjoy it the more. How I trembled with

excessive emotion, when I opened the door of my bed chamber behind the library, and saw her sitting with her side towards me, and her head reclining on the back of the chair. I could see a tremor agitating her frame also. When she was aware of my approach, she looked up with a look of indescribable feeling—then she started up with an inarticulate cry of joy. We met. Let silence cover what no language can express. Reader, thy lot hath been a rare one, if ever thou didst feel in one hour's concentrated delight, a full equivalent for years of dreary absence and of hopeless sorrow.

How long it was ere we could speak, I cannot tell; perhaps fifteen minutes. My first words were, "Oh, my long-lost—my recovered—my dearest Judith—will you now be mine?" She struggled for utterance a moment, and replied, "My heart was yours long ago, and is, and will be, while I live. But my beloved friend, if I be a bride, I must now be a dowerless bride." "None the less precious for that, my dear Judith—if any thing, more precious to my heart on that very account. We shall not be destitute of the comforts of life. God has blessed my exertions, and we can trust Him for the future. So my love, do not refuse me because you have embraced a noble poverty from the best of motives. Oh, let me call you mine without delay—mine by the holiest ties." "I will, my friend, without unnecessary delay." "Thank God for that answer. Let it be this day then, my Judith—this blessed day, while heaven and earth are smiling upon us." "This day, my friend! We are not prepared." "Better prepared in respect to external circumstances than you are aware of. I have been preparing these three weeks, and all is ready, if my Judith's heart is ready." "My heart is always ready—but we are here as Mr. Baylor's guests, upon a very different occasion, and I never saw him till this day." "My Judith, Mr. Baylor has been preparing for our marriage to-day, on the condition that I could gain your consent. Yes, my love, I confess that I meant to take you by surprise, and if I could, to woo and win you to my arms this sweet festal day, while life is young and our joy is fresh—while woods are green, while roses bloom, and every star of Heaven shines auspiciously upon us. Forgive me, dear Judith, for intending to surprise you thus—I meant to give pleasure—I trust that I am not giving pain." "No, my beloved friend—I seem all this day to be in a delirious ecstasy—to meet with you, to find you as I do, with all the freshness and the warmth of the affection that once gave me such delight—alas! so fleeting, and so soon followed by years of affliction, that left me a poor orphan remnant of my family. But this hour has made me compensation." "Then crown my happiness, dear Judith, by permitting me to lead you to the altar." "I refuse nothing, my dear friend, that I am at liberty to grant; but my services as a teacher are engaged to Mr. Danforth." "That too is provided for, my dear Judith. Mr. D. was consulted about my schemes to win you to-day; he would have released you at all events, if you had consented; but I sent to Columbia, and have engaged him a teacher there; so that all is ready." "The occasion is very sudden; I am in a mourner's garb." "Is that the only remaining difficulty, my love?" "I do not now think of any other; and I am not disposed to multiply difficulties. If you can remove this, or if you think it of

no importance, then I yield to your desire." "Heaven bless my dear bride—now I am happy. Walk with me, my love."

So saying I took her arm, and led her through my bed chamber to a large closet at the end of it. There I opened a wardrobe and discovered to her three complete dresses, made secretly after her measure, fine and chastely elegant, with every appendage needful to fit her out completely. "Here are the wedding garments, my sweet bride; take your choice; I will send Miss Baylor to your assistance. I give you—let me see—it is now half-past eleven. I give you an hour to meet me with your bridesmaids down at the Summer Hall, where Mr. Wilson will be prepared to receive our hymenial vows. Now, love, 'One kind kiss before we part' for an hour." With a blush and a smile, she gave what I asked—then dropping on a chair, her face all covered with blushes, she hid her modest confusion with her handkerchief, as I left the room. Immediately I sent Miss Baylor and a servant to the closet, and hastened up stairs to equip myself for the happy occasion.

I was ready in half the time allotted to my bride, and went with my attendants down to the Summer Hall, to see the sports of the company. Some were walking through the garden; some were sailing on the lake in pretty boats; some fishing on the bank; some strolling among the lawns and groves, and others listening in the Summer Hall to a band of musicians, and preluding for the expected dance. The Hall had a plank floor and seats rising behind each other on three sides, leaving the middle space unoccupied. The vault of the roof, and the walls were literally covered with branches of evergreens, wreathed and festooned, and adorned with flowers, especially roses, which were beautiful to the eye, and diffused sweet odors through the surrounding air. Pots with living shrubs and plants of various bloom, were set round on shelves within, and outside at the broad entrance to the Hall, where a verdant bower served as a rustic vestibule to the Hall.

Fifteen minutes after twelve, the sound of a bugle called in the scattered parties. At half past twelve the bugle sounded again, and immediately a company of young ladies in white robes left the house on the hill, and winding down through the garden, approached the Hall. When they entered the flowery vestibule, they furled their parasols, opened their thick array, and discovered in their midst my lovely bride, blushing through her lace veil, and radiant with all the charms of her extraordinary beauty. When I saw her now in her bridal habit, every feature expressive of the high-toned emotions of this to her surprising day, I vowed in my heart that she never had looked so transcendently sweet and interesting.

I took her hand, as she stole a furtive glance at me, and led her to the middle of the floor, where Mr. Wilson in five minutes received our solemn vows, and pronounced the nuptial benediction.

Instantly a joyful shout rang through the assembly; the band struck up hymenial airs; and when I had seated my bride on a chair in the midst of the floor, our joyful friends pressed forward to congratulate us. No sooner was this customary token of good will given us, than a trained band of singers from the village below, headed as usual by their music master, Phil Gleason,

rose from their seats, and sang with great spirit the following stanzas:

Human life is like the year,
Sometimes cold and dreary,
Forcing many a bitter tear
From the sad and weary;
But the storm will overblow—
Blossoms follow clouds of snow.

Sore, O bride, thy trials past,
Long and deep thy mourning,
Brighter days have come at last,
Summer is returning:
Rosy Summer bids thee hail,
Welcome to her lovely vale.

Smiling see the breezy lake,
Smiling see the meadows,
Wood and lawn and tangled brake.
Smile with twinkling shadows:
E'en old Craggyhead above
Smiles upon thy wedded love.

Now attend, ye festive throng,
Join the coronation,
Join the chorus of the song,
Shout with gratulation:
Bring the wreath, the bride instal
Queen of fair Seclusaval.

Bring the wreath, &c.

While the singers repeated the last couplet, Miss Landon, with the other fair attendants of the bride, came forward with something concealed in a basket. She first stooped and whispered a word to Judith; then opening the basket, she took out a beautifully twined chaplet of roses and evergreens, and put it on her head. This action was hailed with enthusiastic cheers by the whole assembly. Judith, with her usual grace and dignity, but with tears of sensibility in her eyes, now rose and made her acknowledgments to the company; she thanked them most feelingly for the ardent welcome they gave her, and for the sympathy which they manifested in her most unexpected but nevertheless, as she said most happy marriage. "I thank my dear young friends too, for the complimentary coronation with which they have honored me. Though it be but a fading crown of roses, it is so much the more appropriate to one, whose royal dignity on this festive occasion, will so soon pass away. But oh! how shall I express the emotions which the surprising and delightful occurrences of this day have raised within me! I can only say, dear friends and strangers, may God give you all a crown that will never fade away." She then resumed her seat, scarcely able to keep her feelings from overcoming her.

Now, I must inform the reader, that I was myself taken by surprise, when this coronation scene was acted. It was no part of my plot, but an underplot contrived by Gleason and other friends, in order, as they said, to express their good will, and to give me a taste of the surprise that I was so liberally dealing out to my bride. I thanked them for their good intention; but was afraid that it was carrying the matter a little too far. However, it went off very happily.

Soon after this, the bugle sounded to dinner. Mr. Danforth conducted the bride to the dining arbor,

where two long tables were filled with guests. The dinner, though not sumptuous, was excellent, as the company seemed to think; for they complimented their entertainer by partaking plentifully of his fare. When nothing remained to be done but to drink wine and other mild beverages, (for no ardent spirit was used,) Mr. Landon, who presided at the first table, called out in a loud voice, "Attention, gentlemen and ladies! I have a toast to propose; after I have repeated it, let all who join in the sentiment drink standing:—'Long life and happiness to the bridegroom and the bride of Seclusaval.'" Instantly the whole company rose, and after they had drank, spontaneously gave three cheers. I rose and made a short speech, and gave my own toast in compliment to the company; but neither the speech nor the toast are here recorded.

Now Baylor, who presided at the other table, sprang up in a fit of enthusiasm, and shouted, "Drink to my toast: 'The sweet rose of Seclusaval! long may she bloom and flourish here.' Nine cheers, my friends." And nine cheers made the valley ring again. After some less particular toasts were given, the company rose from the table and returned to the Summer Hall, where music and dancing began to delight those who were fond of the amusement, whilst others betook themselves to whatsoever they liked best. A party of us embarked on the lake and made a visit to the Echoing Glen, where we seemed at once to have got into another sort of region—a region of the shadow of death. When we sounded the bugle in this dark, cool recess, it seemed as if ten thousand shrill-mouthed demons had set up a yell. This romantic spot drew several exclamations of delight from Judith. When we returned to the head of the lake, we saw all manner of sports going on, and every one appearing to be delighted with the festival. About twenty of my friends now occupied the parlor of my house, where music on the piano and pleasant conversation beguiled the time.

After awhile we began to disperse ourselves in little parties over the adjacent grounds, as choice or accident directed. Some strolled through the parks and lawns; some into the wild glen under Craggyhead; some into the garden below the house; while others found their way into the labyrinthine walks of the wilderness, on the brow of the hill by the house. Here densely matted shrubs, vines and trees, were penetrated by shady avenues, leading irregularly, sometimes to little plots of open ground, from which glimpses could be caught of mountain, hill, and lake; sometimes to wide lofty arcades of tall acacia or magnolia trees, festooned and canopied with luxuriant vines. Of all the spots in this romantic wilderness, the most charming was a knoll on the hill side near the garden. The margin of this knoll was overgrown with an impenetrable thicket of hawthorns, pyracanthas, eglantines, and rose-bushes. Within this thorny cincture was a labyrinth of Paphian bowers, formed of every beautiful and blooming species of vines and trees. In the centre was a small wooden temple, circular in shape, open at the sides, but covered with a dome. In the centre of the temple, a fountain spouted its tiny jet so high, that the water fell back in a fine white spray into a gravelly basin, and ran off by a winding channel into the garden.

To this charming retreat I finally led my sweet wife

alone, through an entrance so covered with foliage and pendent vine branches, as to be invisible to one not acquainted with it. I first conducted her round the sylvan bowers, all verdant, blooming and fragrant. We then entered the little temple, and having seated ourselves at one side, among wreaths of clematis and china roses; we looked awhile in silence at the fountain, which would shoot up its foaming jet for a minute, and then cease for an equal space of time.

"Well, my dear wife, (said I at last,) you have now seen enough of Seclusaval to express your opinion of it. How do you like it?" "Like it! why my dear husband, it is the most charming place in the world: such a sweet image of paradise! such a nurse of pure and holy feelings! None but the virtuous and devout should ever dwell amidst such delightful tokens of Divine beauty and goodness. To have spent one day—my happy wedding day—in so sweet a place, will be a pleasure to me whilst I live: and to visit this charming Seclusaval, even once a year, will add to my enjoyment of a residence in this beautiful country."

"Once a year, my love, do you say?—Is that all? Do you not remember the toasts at dinner, and the coronation in the Summer Hall?—Are you not installed queen of this valley?"

"Yes, my husband, (said she, looking up in my face,) I remember the complimentary toasts and coronation: I felt ashamed on my own account, that I so little deserved the compliments bestowed on me: but when I remembered that you were the real object of them all, I rejoiced at such striking proofs of the enthusiastic devotion of your friends: and especially of Mr. Baylor, who is evidently delighted with his own generosity in giving you a wedding feast amidst the thousand beauties of his valley. He must be a devoted friend of yours."

"He is, my dear; but he ought to be my friend; for I have now to inform you, my sweet wife, that Mr. Baylor is my steward."

She gave me a sudden look of surprise and doubt: "What did you say, my husband? Mr. Baylor your steward? Are you serious?" "Yes, love, I have reserved this surprise for the last. I have now to tell you, that among all the delightful events of this day, I deem it not the least that you are so well pleased with your home; for the compliments paid you to-day were all true and appropriate: you are the bride and the mistress of Seclusaval." As I spoke, her eyes, which were still fixed on mine, began to moisten; the tide of emotion rose and colored her cheek: the fulness of her heart was such that for some time she could not utter a word: she fell on my breast, and presently sobbed out, "I have suffered many afflictions, and deserved them all; but now kind Heaven has overpowered my heart with blessings."

INCIDENTS.

Trivial incidents in early life give a turn to character. We sometimes see a noble oak bent and distorted, from a twist given to the twig. So, in human life, many a little unheeded incident will tell in future years.

c. c.

THE WHIPPOORWILL.

BY PARK BENJAMIN.

Complaining bird, that sing'st at eve,
 When all around is calm and still—
 Why wilt thou make my spirit grieve,
 And bid me "Whip poor Will!"
 What has poor Willy done, that he
 Should be the burden of thy song,
 As, sitting on yon old oak tree,
 Thou chantest all night long—
 "Whip poor Will?"

I whipped him once, but ah! in vain;
 From copse and wood, from glen and hill,
 That oft-repeated solemn strain
 Still bids me "Whip poor Will!"
 And though the little fellow screamed
 For being whipped he knew not why—
 Till on yon heavens the starlight gleamed,
 There came that mournful cry—
 "Whip poor Will!"

On other themes, oh lonesome bird!
 Employ thy deep, melodious bill;
 And let me hear some other word,
 And not "Will"—"Whip poor Will!"
 For William is a pleasant boy,
 A merry-hearted, lovely one—
 His father's pride, his mother's joy;
 Why must I whip my son?—
 "Whip poor Will?"

What! never done! wilt always sing?
 Can no persuasion keep thee still?
 Has thy small harp no other string,
 Beside that "Whip poor Will?"
 'Tis even so—'tis mine own thought,
 And not thy note, does Willy wrong:
 Then sing away—with sweetness fraught—
 Sing that complaining, constant song—
 "Whip poor Will!"

New York, October, 1837.

INTERNATIONAL
LAW OF COPY-RIGHT.

The protection which society offers to the property of its individual members, marks the gradation of its improvement, and forms a distinguishing feature between rude and polished nations. And in proportion as the right of property is held inviolate, does civilization advance and the comforts and conveniences of life multiply. Hence it is, that in free and well organized governments, wealth accumulates, the arts flourish, science advances, and the cause of sound learning keeps pace with the improvements of the age. The least defection from this principle, although it may not be felt in its immediate consequences, is injurious to the well-being of society; since it will serve as a crevice to an entering wedge, which would make wide the chasm of national and individual prejudices and hos-

tilities. Justice is the only sure basis upon which the friendly relations and transactions of men can be safely rested. This being true of individuals, it is likewise true of nations; for nothing is more evident, than that the same principles of equity and morality which govern individual, should also govern national transactions.

Having premised these remarks, I come now to the consideration of the justice and expediency of establishing a law of international copy-right, between the United States and Great Britain. The object of a copy-right, is to secure to the author the honest rewards of his labor, by granting to him for a limited length of time, the exclusive control over the sale and publication of his work. The propriety of such a law must be plainly manifest, since without it, the author would receive no remuneration whatever; his products are immaterial and cannot therefore be appropriated; they have an indefinite power of self-production and may thus speedily become the property of all. The protection, then, of literary property, is the object of an international law of copy-right. Between the United States and Great Britain no such law exists; and from the community of language of the two nations, British authors are extensively read in our country, whilst the profits arising from the sale of those works, are wholly appropriated to the advancement of individual interest of the American bookseller. Not receiving protection from the laws of our land, their works—as soon as they reach this continent—become the property of every American, who has the inclination and possesses the means of erecting a printing-shop; whence he may send them forth, bearing the imposing titles of being *revised, abridged and corrected, or enlarged, improved and stereotyped*, according as the prospect of filling his purses presents itself. Hence, it is easy to perceive the gross injustice done to foreign authors. Our publishers—not having to pay the price of copy right—enjoy the two-fold advantage of both author and publisher. They reap richly of that golden harvest, the seed of which were sown with care, and fostered by the arduous labors of that class, which in every community, is most illy requited for their exertions. Now, I would ask, can a system be founded in true philosophy which proceeds upon a principle like this—that one man's loss is another's gain; or that regards literary property as no property at all? Does it accord with the teachings of political economy? Are not the products of a man's literary labors, as much his property as any of his agricultural or manufactural products; and does not society derive benefit from all? If so, and none will dare deny it, why does not the law extend to it the same protection it offers to every other species of property? Why this insecurity of literary possessions? When an inhabitant of Great Britain sends to our shore the most paltry production of the soil or any manufactural commodity, it receives all the protection due to property; and should any one dare filch aught from the mass, he would meet with merited and condign punishment. But let the same person write a work, whose far-reaching influence, embracing all countries and circling all time, shall bless and adorn generations yet unborn—and how is he remunerated or what is its security? The rapacious harpies of our coast, seize on it as the vulture does on its prey, and trans-

form it into as many shapes as the fabled Proteus was capable of assuming; and the injured author, deprived of every means of redress, beholds his work, which cost him the *care and labor and toil* of years to produce, torn away from him and made the property of another. Call this justice! Then are words unmeaning things and 'twere folly in us to use them! The mildest name that can be applied to a practice like this, is that of literary piracy; and yet it is tolerated by law and sanctioned by custom! But the fact of its not being prohibited by law, does not by any means make it innocent; nor is it disrobed of its guilt, because so many engage in it as to keep each other in countenance. The principle is wrong; and it is beyond the power of man, by any method of association or combination, to make that which is radically wrong, right.

The advocates of this system assert, that British authors receive a sufficient remuneration in their own country, and that, therefore, the surplus rightfully belongs to the public generally. This assertion, I contend, is altogether gratuitous, and by consequence, the conclusion must be false. If true—since the same principles obtain in every species of property—I have the right to demand of my neighbor, the surplus over and above, what will render him a sufficient compensation for his labor. Now, were I to make of him such a demand, I should without doubt, be recommended to the kind attentions of some medical adviser; and since it is natural for us to spare no exertions, in securing what we conceive to be our right, I might in so doing, cause no little annoyance to him of whom I should make the demand, and thus run the risk of having my powers of locomotion restrained within the narrow limits of a straight-jacket!

If they receive, as is asserted, a sufficient remuneration in their own country, whence are those dolorous complaints, long and loud, so often uttered by British authors? Whence those fulsome dedications and that cringing sycophancy which so strongly characterize the productions of the English press? The fact is, and we cannot disguise it, that in most cases their independence is crushed for want of a generous support; and they resort to the menial service of paying court to "My Lord" to secure his patronage and obtain his influence. It is true, indeed, that they can get out a copy-right for their works in their own country, and no one dares reprint them except the author's assignee; but in the absence of an international law of copy-right, this is of comparatively small value. An English publisher cannot afford to pay a high price for the copy-right of a work, while our publishers enjoy the privilege of reprinting the same work, free from all cost. If he pay a high price—that is, amply remunerate the author—his reprints must necessarily be dearer than those of our publishers, whose only outlay is that incurred in publication; hence, the liability of his being undersold and his consequent loss of capital. So great are the facilities of communication between the two countries, that our publishers are enabled to furnish the English market with reprints of English works at a more reduced price than can be furnished by its own publishers; for *ceteris paribus*, the cost of copy-right is greater than the cost of transportation. Hence, this irresistible conclusion forces itself upon us, that serious injustice is done to British authors; and that it becomes

us as Americans to make to them immediate restitution. Thus far have I considered the subject on the simple ground of justice; and upon this immutable basis might I safely rest my cause, did conviction invariably follow in the light of truth. But this is not always so; for no doctrine is more universally agreed on by metaphysicians, or more firmly established by the concurring sentiment of every age, than that the passions exercise a controlling, and oftentimes, a perverting influence over the powers of the mind. This, therefore, being true, it becomes the sincere inquirer after truth, to divest himself of all prejudices and prepossessions, that he may weigh in impartial balances the arguments advanced, and detect in either scale, by clearness of perception and acuteness of observation, the least preponderance. In my subsequent remarks, I shall endeavor to show the influence of the present system on American literature; and inquire into the expediency of enacting the law proposed.

From a slight and cursory view of the subject, particularly as it regards our own country, we might perhaps be so far from desiring such an enactment, as even to congratulate ourselves on the non-existence of such a law; since it contemplates so extensive a dissemination of literary and scientific knowledge. This view, without doubt, has hitherto prevented any legislative enactment on the subject, and given rise to much rant and idle declamation. While every port of the Atlantic is considered to be an unfailing source of light, whence emanate rays to gladden and enlighten our land; and while the "march of improvement" and the "march of mind" are the noble themes of school-boy declamation, he who opposes a system, under the auspices of which, all things move so prosperously on, runs no small risk of being denounced a traitor to the best interest of his country. But before the sentence of condemnation is passed, let the arguments that may be advanced, be fairly weighed and calmly considered.

The ground upon which the present system is defended, is, that the absence of an international law of copy-right, favors the cause of American literature, by increasing the number and diminishing the price of books. To ascertain how far this is correct, let us inquire what will be the operation of the opposite system; and if it be found more beneficial and salutary in its effects, it is a sufficient reason why it should be preferred and adopted. By the enactment of such a law, literary property would be rendered more secure; and according to the general laws which govern the application of labor to capital, a greater inducement would be offered to the community to engage in literary pursuits. And moreover, it is a well established principle in political economy, and one confirmed by our own experience, that the greater the encouragement given to labor, the greater will be the amount of productions; and *vice versa*. This then being true, as the proposed system would present inducements, which did not before exist, the number of books would be increased, and consequently, according to the laws of supply and demand, there would be a corresponding diminution in their respective prices. The prospects of remuneration being held out to all, both British and American authors would enter the field and write expressly for our country. The great number thus brought out on the arena, and the competition between them, must inevi-

tably reduce the price of works to the proper standard ; for more than this, it were unreasonable to ask ; since one part of the community have no right to receive a benefit at the expense of the other part. If they did not, however, immediately fall to their proper level, they could not, in the very nature of things, for a long period of time, remain far above it ; since, where the use of property is free, it is the invariable tendency of industry and capital to flow from the less profitable to the more profitable employment, until the profits of each shall be perfectly equalized. Where then shall we find that great difference in the price of works, for which the advocates of the present system contend ? If there be any, it is nothing more than any honest man should wish to pay ; a full and ample remuneration of the author. With those, who look upon authors and literary men as incorporeal beings, who can live in the seclusion of solitude and in the retirement of the desert, independent of the common necessities of animal life, I am not disposed to join issue ; for I have ever been taught to consider them corporeal in their nature, and composed like other men, of bone and sinew, flesh and blood. If it be true, that their highest aim is not pecuniary emolument, it is none the less true, that without some compensation of the kind, they must ere long cease to have on earth a "local habitation or a name."

Having noticed the only argument that favors the present system, let us next consider its general influence on the literature of the day. This we shall find to be *evil, and that continually*. The first bad consequence to be noticed is, that it places the choice of books into the wrong hands. Since our publishers select the works to be reprinted, they have to a great degree the direction of the reading of the community. They, of course, make selection of such works, as will command the most ready and extensive sale ; and in so doing, they answer the demands of one class, while the wants of the more intelligent and cultivated classes are almost entirely neglected. Moreover, there are many most valuable works, which would be brought into wide and free circulation, if once placed before the public, but which our publishers suffer to remain wholly unknown, because the immediate sale of an edition may be doubtful. Consulting merely their own interest, they reprint such works and in such a manner as will yield them the greatest amount of immediate profit ; and to judge of the expertness of those panders to the vitiated taste of the age, and of their sphere of usefulness to literature and to science particularly, I may be permitted to cite one out of the innumerable instances which have repeatedly occurred. A shrewd publisher, undertaking to reprint Philip's work on Mineralogy, omitted all the diagrams and scientific characters as he *stupidly* supposed, *to bring down the science to the comprehension of all !* Doubtless the same sagacity that suggested this improvement, would likewise suggest the propriety of omitting the figures in geometry, to render that science more easy to be acquired ; an act, for which he would be highly entitled to the lasting gratitude of all college students ; since it would be the means of effectually banishing from the recitation-room that great object of terror, the *black board !* But this is not the only instance in which ignorant booksellers and publishers have committed literary murder in the first degree ; I call it *first degree*,

because it is wilful and premeditated ; for scarcely any work escapes their clutches without bearing some marks of transformation. They thus send forth works to the public so changed and mutilated that were the eyes of the author to rest upon them he would no longer recognize them as his own. And in the hands of designing men all this is not unfrequently done for party, sectarian or some other hellish purpose which they think to promote by the sanction of the author's name. Thus to pecuniary loss is added the loss of reputation. Again. Novels and other species of fictitious writing, being the most popular productions and commanding the most ready and extensive sale, are the works which our publishers usually set afloat upon the surface of society to send abroad their vitiating influence. If the most valuable work and the most paltry novel be simultaneously issued from the English press, the latter would first be given to the American public ; nor should we ever hear of the former until its success had been fairly tried ; and perhaps not then, if some such thing as Jacob Faithful or Peter Simple should make its appearance into the world. And this is the boasted result of the absence of an international law of copy-right ; this is the encouragement given to literature. But it may be asked, Would this evil be arrested by enacting the law proposed ? We think it plain that it would. Had our publishers to pay the price of copy-right for all the works they reprinted, it is quite certain that they would not be so fond of catching up and reprinting the trashy works of the day. In their purchases they would look beyond those works which are only kept in existence by the first breath of popular applause, and which, like the glow-worm's lamp, are extinguished by the light of day, to works that would afford them a more permanent revenue. The trifling novel and catch-penny, the cheap nonsense of the day, which excite the momentary curiosity of the public and then sink to be forgotten, would be superseded by works of greater value. The interest of the publisher would then be the interest of the community ; and so long as there is a coincidence here, we may entertain high hopes that the republic of letters will move triumphantly on.

But the most pernicious consequence flowing from the absence of an international-law of copyright is the poor encouragement given to native authors. From what has already been said concerning the operation of the present system, it is plain to perceive that this is far from being an idle or unmeaning assertion. Within a few days' sail there is a nation of authors who speak and write our own language, and whose productions can be procured free from all cost. Hence our publishers, true to the selfishness of human nature, are wholly engaged in reprinting the works of foreigners ; nor could it be otherwise ; for that publisher would be indeed foolish and short-sighted, who would pay a native author a fair price for the copyright of a work which he was not sure of selling if printed, when he can obtain for nothing the work of some English author of such well known popularity that the sale of an edition is certain. Such is the operation of the present system—militating directly against the cause it was designed to promote. Of our authors, those alone of established reputation receive a remuneration for their labors. The youthful aspirant to literary honors meets

with no encouragement, receives no reward; and if he rise at all, it must be over an array of unfavorable circumstances and opposing obstacles. Before he can become an author, he must not only possess an independency, but must likewise have attained to some distinction in the literary world—requirements almost amounting to a physical impossibility. Were our authors generally men of independent fortunes, they might indeed, though at a great sacrifice, favor the world with the results of their labor. But who are they? Almost invariably men in the most indigent circumstances of life. The wealthy part of our community—those who were cradled in opulence and nursed in the lap of luxury—are in too many cases mere drones in society; feasting on the rich stores procured by the industry of other hands. Their wealth administers to their comfort and they live but to enjoy it. If any one doubt it, let him inquire into the history of the lives of our literary men, and he cannot fail being struck with the fact, that they are almost without exception from the humble walks of society; that they arose not from the mansion-house of the wealthy, but from the lowly cottage of the humble poor. With no riches but his natural endowments, with no reputation but that of unpretending probity and integrity, he begins the labors of an author, dependent solely on the success of his first publication for the means to pursue his literary course; so that, should he meet with a repulse at the very threshold, his hopes are crushed, forever crushed. But what else can he expect? Who ever heard of a publisher's reading and examining the merits of an original manuscript? And is it reasonable to suppose that he would hazard a large sum on a work, the success of which is uncertain—of the merits of which he is totally ignorant? Nay, verily. Man knows too well his own interest to pay out his money at random; he loves too well the *sine qua non* to pass it from his hands without the prospect of the *quid pro quo*. This is the boasted result of the present system; this the encouragement given to rising genius! And let it be said, with shame to our country, that it was this that has driven many of our young authors to the necessity of sending their works abroad for publication. Not receiving encouragement from their fellow-countrymen, who should have been first to have offered it, they sought it in a foreign land, where they must needs establish a reputation before they could receive support at home. It was this that has crushed the youthful genius ere it displayed the first buddings of its incipient greatness, and deprived our country, nay the world, of some of the proudest monuments of intellectual grandeur. And in fine, it was this that has kept and ever will keep the standard of literature so low in our country, constantly subjecting her to the insulting taunts from abroad, as "Where are your learned men?" and "Where are the memorials of their greatness?" And shall we consider this a matter of minor importance? Is a national literature a something little to be desired? Shall we content ourselves to be the mere passive recipients of that which is catered for us abroad? No—it is not the spirit of the American people. Their united voice is in favor of a national literature. For to whom are we to look for a defence of our free institutions, our customs and our opinions, if not to our native born American? Do we expect to receive it from the pen of a foreign writer—

one whose education together with all the bright associations of his youthful and maturer years, bind and endear him to the country and institutions that gave him birth? Were this the only source whence we could look for aid, we might now prepare to chant the funeral dirge of our country's overthrow. But no—we look not to this quarter. We look to our native-born citizens—we look to those who have grown up among us—who have been educated in the school of moral and political science, and who know how to estimate those sacred principles which form the basis of our republican institutions. Let ample encouragement, therefore, be given to the cultivation of letters; *then, and then only*, may we confidently expect to see our country arising in the greatness of her strength to dispute the palm of learning with the most enlightened nations on earth.

Dr. Francis Wayland remarks, that "one of the most efficient means of intellectual improvement which government can adopt, is, that of rewarding those who have been successful in the advancement of literature and science. This is done by the British government; and I see no reason why it is not done wisely; for wherever it is done, learning is essentially promoted. In this country, however, it is, I believe, never practised. The only rewards which we ever confer, are for military or naval service. The propriety of those, I by no means, in this place, dispute; yet, I think it would be difficult to show, that warriors are the only benefactors of mankind, or, that Whitney or Fulton did not deserve as well of their country, for the invention of the cotton gin and the application of steam to navigation, as they would have done, had they captured a fleet on the ocean, or routed a tribe of Indians in the forest."

One other consideration and I have done. By the enactment of an international law of copy-right, no possible loss could be incurred, while, as I have endeavored to show, great good would be gained. The standard works of the oldest and best English authors, which constitute the very life of English literature, could not be affected by it; since their term of copy-right has long since expired and they have become the common property of the world. If it seriously affected any, it would be the light and trashy works of the day, from the effects of which our country suffers, both in a moral and a literary point of view. Whilst, therefore, we have nothing to lose but much to gain, we should not hesitate. Justice to our own authors; justice to the cause of sound learning and pure morality, as well as justice to foreign authors, all imperatively demand the protection of such a law. To enact it, we are bound by the principles of the existing treaty of amity between the two countries, and by the general and universal law of reciprocity. England affords to our authors all the protection due to property and all the advantages of a law of copy-right; and we owe it to her, to afford to British authors the same protection and the same advantages. Justice, I repeat, is the only sure basis, upon which the friendly relations and transactions of nations can be safely rested. They have petitioned for a redress of their grievances—let Congress do her duty and all is well. But never, no, never let the honor of our country's fair name be sullied by the foul blot of national injustice; never let it be said that America was recreant to her duty; but rather let her motto ever be, "*Fiat justitia calumnia ruat.*"

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE V.

DESTRUCTIVENESS.

This organ is situated immediately above and extends a little backward and forward from the external opening of the ear, and gives to that part breadth in proportion to its size. In granivorous animals, only a small portion of the brain lies behind the external opening of the ear; while in the carnivorous, a considerably larger mass is situated there. This is well shown by exhibiting the difference in this respect between the skull of the young lion, and this, the skull of the roebuck. This is the skull of a fox; this of a sheep; this of a cat; this of a dog; this of a horse; this of a savage baboon. You notice in all that those of the carnivore are broadest just over the ear, whereas those of the herbivore are generally broadest higher up. You notice too that the former are all much broader in proportion to their size than the latter. By the difference in this part of the skull alone these two classes of animals are readily distinguishable from each other.

Dr. Gall early noticed this appearance, but drew no particular conclusion from it, till one gentleman sent him the skull of a parricide, and another sent him the skull of a highwayman who, not content with robbing, murdered his victims. On comparing these, he found them both very wide here. This fact, in connection with his previous observations on the skulls of animals, led him to conclude that in this region was situated an organ which gives the disposition to kill. At first his mind revolted at the idea; but finding, on still further examination, that Nature spoke unequivocally, he was forced to believe her. This organ he called by a French name—*instinct du meurtre*—which signifies propensity to kill, but which was ignorantly translated into English by the word *murder*. This blunder was the cause of infinite abuse.

This faculty has called forth much declamation. Can it be possible, say the declaimers, that God has implanted such a propensity in the human mind? I observe, in the first place, that others besides Phrenologists have acknowledged the existence of such a propensity. Lord Kames names it as the "*appetite for hunting*." It has been said, indeed, that the pleasure of hunting is in the pursuit and the consequent simulation; but this is not so. I have asked hunters whether, if some machine could be invented to fly before them as the game now does, they would feel the same pleasure in pursuit. The answer has always been in the negative: some animal must suffer, or little pleasure would ensue.

Poets and authors who delineate human nature are familiar with this feeling. Sir Walter Scott describes its abuse as "*the ruffian thirst for blood*." The author of *Recollections of the Peninsula* says, that not only soldiers, but others, "*talk with an undefined pleasure about carnage*." I have met with young men of good moral qualities whose thoughts ran habitually on killing and slaughtering. The impulse was restrained, but they confessed that to smother and slay would give them great momentary gratification. In them the organ was decidedly large.

In regarding the scene of creation, we perceive all living beings destined to destruction. And this has ever been the case, so far as we can trace the history of the earth, which informs us that various races of animals and vegetables have successively been destroyed. The works of art are subject to the destroying hand of time; man himself is destined to destruction. He is surrounded, too, by animals bent on destruction. Moreover, he has received a stomach fitted to digest animal food, and a bodily system which such food is fitted to nourish and preserve. To gratify this appetite, he must deprive animals of life by sudden destruction, as their flesh is unwholesome if they die of old age or disease. To place man on earth, therefore, without an organization fitting him for those circumstances of his condition, would have been any thing but indicative of supreme wisdom and beneficence. By this organ of Destructiveness he is put in opposition with his own destiny and that of the external world.

Combativeness gives us courage to face danger and resist aggression. Destructiveness gives us the desire and disposition to hurl destruction on the aggressor. Those in whom it is large take a kind of pleasure in seeing scenes of suffering, at the sight of which those in whom it is small would be agonized. Thus humane and even cultivated individuals experience pleasure in witnessing executions. They would not put a man to death, but if one is to be put to death they think it no harm to look on and enjoy the performance. It is always found large in good operating surgeons; medical gentlemen in whom it is small, though possessed of all the requisites of knowledge and skill, would refuse—nay, would be unable—to operate. We see, then, that this organ is absolutely necessary even to perform the behests of Benevolence. I knew a clergyman who had very small Destructiveness, and who could not bear to see a person bled. His son was taken with inflammation of the lungs: the physician was sent for; and proceeded to bleed immediately, telling the father that he should want his assistance. The minister screwed up his courage, remained till the operation was performed, and then fainted away.

This organ is always large in cool and deliberate murderers, such as Agnes Clark and John Bellingham, whose heads I now show you. Bellingham murdered Percival, the English Minister, in 1811, by deliberately shooting him in the lobby of the House of Commons. In this see how wide! it is the skull of the woman Gottfried, who, though in easy circumstances, murdered in a series of years both her parents, her children, two husbands, and six other persons. She poisoned them by small doses of arsenic; yet by their death-beds she would stand seemingly in an agony of grief, yet in reality gloating over their protracted torments. See the size in the head of Hare, who assisted Burke to murder sixteen persons for the sake of selling their bodies for dissection, and who, after his bloody deeds, would sleep as undisturbedly as though he had been merely killing a pig. This is the head of a man of Belfast who murdered his father. The jury that tried him very properly returned, in conformity with the evidence, a verdict of insanity. He was accordingly confined to an asylum, from which, after some period of correct conduct, he was liberated, notwithstanding his terrific organization. He proceeded to Liverpool, where for a deed of violence he was immediately arrested, and after trial transported to New South Wales. I expect that the next we hear about him will be that he has there committed some dreadful deed.

Contrast these skulls with that of the Hindoo. How small this is in comparison; and yet it is of the average size of these people. The Hindoos are notorious for their dislike of putting animals to death. In some parts, indeed, they have hospitals for the reception and maintenance of sick animals. Here is the head of a Flat-head Indian; see how large in this region! Here is one of a Charib, which is still more developed. In these heads you will notice that large Destructiveness is combined with small reflective and moral faculties. Its large size, in proper combination, is quite compatible with high moral character. Here, for example, is the head of Captain Parry, in whom it is large, but in whom the intellectual faculties and moral sentiments preponderate. It is large, too, in Spurzheim, as you may perceive by this cast, yet he was an amiable philosopher.

Satire is a combination of this faculty with wit. It must have been large in Byron. It gives point, too, to that sarcastic, cutting speech, which is so unpleasant to those who are the subject of it. Some swear with a heartiness which others cannot imitate. In these, Destructiveness is found large. It gives a force and energy to their imprecations which those who think swearing manly, but whose Destructiveness is small, vainly strive to imitate. There is a softness, a roundness about their imprecations which completely destroys their effect. This organ is the fountain of invective. In Parliament, we find some men with it and language very large; and their speeches were complete torrents of invective—often of nothing else. Yet after such a speech, the newspapers are full of laudatory remarks: "such energy!" "such torrents of invective!" "such manly eloquence!" they cry out. For my own part, I no more admire Destructiveness manifested in this way than when manifested by blows.

With due reverence, I must be allowed to say, that I have noticed preachers in whom this organ is very large to dwell principally on the threatenings of the gospel—on "the worm that never dies, and the fire that is never quenched." From those in whom Benevolence is large and this organ small, such threat-

enings are very rarely heard. Preachers of the first class mistake, it seems to me, the fervors of Destructiveness for the inspirations of moral eloquence, and, while they gratify the stern, they harrow up the feelings of the amiable and susceptible. Phrenology will be very serviceable by teaching men the secret fountains of their emotions, and that what is gratifying to them is not necessarily gratifying to others.

Those in whom this organ is small are often deficient in proper indignation. A community of such men would be a prey to the profligate and unprincipled. Contumely and suffering would inevitably be their portion. If aggressors visit a community in whom exists a proper endowment of this faculty, destruction is hurled upon their heads, and others are kept aloof by the terror which such a manifestation of this feeling inspires.

It was exceedingly amusing to see the ebullitions of wit which writers perpetrated against Phrenology on account of this organ, about the same time that the legislature found it necessary to enact laws to curb its activity. Thus the statute 3d, George IV. chap. 71, ordains—that “if any person or persons shall wantonly and cruelly beat, abuse or ill-treat any horse, mare, gelding,” &c. he shall pay certain penalties to the king.

It is the great size of this organ and Combativeness which inspires men with such a sympathy for war. Of this sympathy we, a short time ago, had an example in this country. The boundary question was agitated, and every mouth breathed war. The excitement has now passed away, and many are astonished now, as I was then, at the violence of their emotions. One great use of Phrenology is to indicate the source of our feelings, and to show us that the propensities ought never to act as the controllers but merely as the servants of reason and the higher sentiments. I met in Edinburgh a young American who said that the United States equalled any European nation in every thing excepting military glory, and that a great war, which would afford them an opportunity for acquiring it, would be a national blessing. I told the young man that his organs of Combativeness and Destructiveness were probably large, which was proved by examination; and added that he was merely mistaking his own propensities for the wishes and interests of his nation.

This organ is sometimes diseased. This is a most important point in jurisprudence. When inflamed, there is an exalted manifestation of its function, and a disposition to burn, kill and destroy. Violence or murder may be committed, and we may hang the person for disease. Against sending men to the gallows under such circumstances Phrenologists protest. A man in a village in Scotland was observed to enter a cottage and presently come out and walk deliberately away. He was thought to be a beggar, and no further notice was taken of the circumstance till an hour or two afterwards, when a neighbor entered the cottage and found the old woman who resided there, lying on the floor with her skull cleft in two by means of a hatchet. It is an important fact that not the slightest article had been stolen. The man was pursued, taken, and brought to trial. The evidence was such that no doubt remained on my mind that the prisoner was a monomaniac. I mentioned this to Mr. C., the attorney for the crown, a very worthy and amiable man, but he could not understand the force of my representations, and my efforts were in vain. A petition was sent to the crown that the man might be confined in a mad-house instead of being hanged, but the petition was refused. The day before that appointed for his execution, Mr. C. asked me if I still considered the man insane. I replied, “Certainly I do.” At two o’clock in the morning of the day on which he was to be executed, he sent for the mayor of the city for the purpose of making some important confessions. The mayor went, when the man commenced the relation of a whole list of atrocious murders. He said he had killed a child at such a time in such a street of Edinburgh—a man at such another place—and so he kept on, enumerating six or eight murders in the country, in the most circumstantial manner. The mayor sent for the superintendent of the police and related the man’s confessions, asking him if they could be true, seeing that no such murders had ever been heard of. The superintendent said it was impossible. They were then convinced that the man was staring and glaringly mad; but at that time no person in Scotland had power to stay the execution, so the poor maniac was taken out at eight o’clock the same morning and hanged. I met Mr. C. some time afterward, and asked him what he then thought of the case. “The fact is,” said he, “it was an ugly business, and the less is said about it the better.” But

if by relating the circumstances I can draw attention to the subject and prevent repetitions of such manifest wrong, the relation will be serviceable. Like cases are very numerous in the annals of criminal jurisprudence.

Some say, Granting that a man is mad, if he be inclined to commit murder, he is best out of the way. But madness is a disease; and it would be quite as just and humane to hang a man for having the yellow fever, because he was liable to infect his neighbors. Besides, it makes a vast difference to a man’s family whether he be hanged or confined as a lunatic. The latter may be borne with resignation, but the former overwhelms with a feeling of mortification and a sense of infamy. Justice, then, not only to the maniac, but to his relatives and friends, demands that we should be careful in our judgments. And let no man treat this subject as one which does not concern him. None of us know but that ourselves or some member of our families, or some one in the list of our friends and associates, may soon be affected in like manner.

Individuals who commit murder or set fire to property without rational motive, often ascribe their actions to the temptation of the devil; they say that he never ceases to whisper in their ears exhortations to mischief. Diseased activity of this organ, filling the mind with the desire to destroy, probably gives rise to such impressions.

Destructiveness is the great fountain of passion; its natural language is to give a sort of wriggling motion to the head like that of a dog in the act of worrying. The foot is stamped and the face wears a howling expression, and the body is drawn up towards the head. In Dr. Chalmers it is very large; and when it is operative in his speeches, he clinches every thing with a blow. When preaching against sin, it seems as though he were endeavoring to pound it out of mankind. Here you see it strongly manifested in a scene of matrimonial strife: the woman is darning her husband, and he stands with his head bent forward, his fists clenched but retracted, his countenance peculiarly expressive of the power which he has to exercise in order to prevent passion from boiling over and relieving itself by blows. If, in a friendly converse with a person in whom this organ is large and Secretiveness small, one happens to touch on some irritating topic, in an instant the softness of Benevolence, and the courtesy of Love of Approbation, are gone, and the hoarse growl of Destructiveness ushers in a storm.

ALIMENTIVENESS.

That the appetite for food is an instinct not referable to any of the recognized faculties of the mind early occurred to Gall; but neither he nor Spurzheim discovered its situation. In the sheep, the olfactory nerves are perceived to terminate in two cerebral convolutions, lying at the base of the middle lobe of the brain, adjoining and immediately below the situation of Destructiveness in carnivorous animals. This fact gave rise to the idea that this part of the brain may be the organ which prompts these animals to take nourishment. Subsequent observations made by various individuals have proved that there is in man an organ of appetite for food, situated in the zygomatic fossa.

The stomach is to this organ, what the eye is to the sense of seeing. Cut off the communication between it and the brain, and appetite will be lost. This has been tried. A dog was kept without food till he was ravenous with hunger; the pneumogastric nerve was then divided, and the sensation left him at once. A number of cases have occurred, in which a gluttonous appetite existed during life, and these convolutions were found, after death, ulcerated. Dr. Caldwell thinks the burning desire of the drunkard to arise from disease of this organ, and recommends it to be treated with bleeding, cold water, quiet, and attention to diet.

That this is the organ of alimentiveness has been confirmed by Vimont, and since coming to this country, I have seen two strong proofs of it in the collection of Dr. Norton of Philadelphia. The one was a skull of a Dutch Admiral, who died at Java in consequence of excessive eating, in which the organ is very much developed; but it is still larger in this, the skull of a convict of New South Wales, who murdered seven people in the woods and ate them.

In the *Annals of Physiological Medicine*, an account is given of a girl who from infancy exhausted the milk of all her nurses and ate four times as much as other children. At the Salpêtrière she ate eight or ten pounds of bread daily as her ordinary quantity; but she had fits of hunger two or threetimes a month, during which she devoured twenty-four pounds of bread. She

went one day into the kitchen of a rich family where a dinner party was expected, and devoured the soup prepared for twenty guests, together with eight pounds of bread! On another occasion she drank all the coffee prepared for seventy-five of her companions in the Salpêtrière! Her skull is small, but the propensities predominate, and alimentiveness is largely developed. Many similar instances of voracity are recorded by medical writers. In these cases the food passes undigested. You may generally tell those in whom this organ is large by the interest they take in the table. This organ has been marked as probable, but I now consider it established.

LOVE OF LIFE.

That this feeling is manifested in different degrees by different individuals is certain, the bravest men being sometimes excessively attached to life, while the most timid are often indifferent to death. I know a man, in rather poor circumstances, who declared that his attachment to life was such, that he would rather live in torment forever than suffer annihilation. Another, who was present, and a much more fortunate man, said he could not conceive the feeling which would lead to such an expression. Dr. Combe had a patient who showed extraordinary anxiety about death. In her he found an enormous development of one convolution at the base of the middle lobe of the brain, and the skull showed a corresponding very deep and distinctly moulded cavity. From the situation of the convolution its development cannot be ascertained during life. In the Hindoos carelessness about the continuance of life is wonderful. It is often necessary to subject them to punishment in order to induce them to take ordinary pains for self-preservation. If fatigued on a march, they ask no greater boon than to be allowed to lie down and repose with every chance of being devoured by the wild beasts, or of being overtaken and slain by the pursuing enemy. That species of *hypochondria* which consists in morbid fear of death, is probably produced by a disease of this organ. Love of life is strongly manifested in the scene between Rob Roy's wife and Morrison.

SECRETIVENESS.

This organ is situated exactly in the centre of the lateral part of the cranium, and lies immediately above Destructiveness. Dr. Gall, in early youth, was struck with the character and form of the head of one of his companions, who was distinguished for cunning and finesse. Although a staunch friend, he experienced great pleasure in deceiving his school-fellows. Dr. Gall says his natural language was absolutely expressive of cunning, and such as we see in cats and dogs when in playing they want to give each other the slip. At a subsequent period he became acquainted with another who was not only cunning but perfidious, and his temples swelled out in the same manner as the last person's. His expression was that of a cat watching a mouse. At Vienna he became acquainted with a physician having a similar development of this region, and he often told Gall that he knew no pleasure equal to that of deceiving. He carried his tricks so far that the Government warned the public, through the medium of the public prints, to beware of him. From these facts Gall concluded that there is a primitive tendency toward cunning in the human mind, and that its organ is situated in the region before described. By a great number of observations this conjecture was fully confirmed.

The various faculties of the mind are liable to involuntary activity from internal causes, as well as from external excitement. Acquisitiveness inspires with strong desire for wealth, language for utterance, tone for music. If outward expression were given to these feelings as they arise, social intercourse would be disfigured with a rude assemblage of gross or ridiculous improprieties. There needs some ever-prompting feeling to curb in these instinctive impulses until the judgment shall decide upon the propriety of utterance. This curb is supplied by Secretiveness. Shakespeare, to whom I often recur for accurate and striking descriptions of the manifestation of feeling, has well portrayed this feature of the mind. Iago says:

"Utter my thoughts? Why, say they are vile and false—
As where's that place wherein foul things
Sometimes intrude not? Who has a breast so pure
But some uncleanly apprehensions
Keep leets and law-days, and in session sit,
Whose meditations lawful?"

Secretiveness is an essential ingredient in a prudent character. It serves as a restraint upon ourselves and a shield against the

prying curiosity of others. 'When Napoleon,' says, Sir Walter Scott, 'thought himself closely observed, he had the power of discharging from his countenance all expression save that of an indefinite smile, and presenting to the curious investigator the fixed eyes and rigid features of a marble bust.' 'A fool,' says Solomon, 'uttereth all his mind; but a wise man keepeth it till afterward.' Scott's character of Louis XI., in *Quentin Durward*, is a fine delineation of the predominance of this feeling. 'He was,' says he, 'calm, crafty, and profoundly attentive to his own interest. He was careful in disguising his real sentiments and purposes from all who approached him, and frequently used the expressions, that 'the king knew not how to reign who knew not how to dissemble;' and that, 'for himself, if he thought his very cap knew his secrets he would throw it into the fire.' Like all astutious persons he was as desirous of looking into the secrets of others as of concealing his own."

This organ is found large, as you see, in the bust of Robert Bruce. Those who have it very large look upon life as one great stratagem, and upon cunning as wisdom. I knew an English lady who was very amiable, but who had a stratagem for the smallest thing. Pope, according to Lady Montague, played the diplomatist about cabbages and turnips, and Johnson says of him that he hardly drank tea without a stratagem. I knew a gentleman, a resident of a village east of Edinburgh, in whom it was very large, and who was so desirous of doing every thing secretly that when he had to go to Edinburgh he would walk west, without coat, out of the village, and by a turn come round to the Edinburgh road, where a person would be waiting with the absent part of his clothing. He would thus be able to go to Edinburgh without any of the village knowing, and, I suppose, without any of them caring. It is said a tailor lived next door with as much secretiveness as he. He long wished to know how this tailor passed his time, but could not learn till one night he fixed a ladder, got to the top of the house, removed two or three tiles, and saw him at work in his garret.

Secretiveness is large in the English, who seclude themselves and surround their houses and gardens with high walls, and are reserved about their history or affairs. It is small in the French, who are very communicative, and pass most of their lives in public. When Secretiveness is large, joined to small Conscientiousness, it prompts to lying; joined to large Acquisitiveness, it prompts to stealing. Merchants in whom it predominates, and whose circumstances are declining, frequently conceal their difficulties from their family till bankruptcy bursts upon them like an explosion. They then plead as an excuse for their conduct a regard for the feelings of their relatives, but the real springs of their conduct are overweening Self-esteem, which hates to acknowledge misconduct or misfortune, and inordinate Secretiveness, which is instinctively averse from candid communication.

Humor is a combination of wit and Secretiveness. Hence the English and Italians, in whom this organ is large, are very fond of it. The French, in whom it is small, think humor buffoonery, and cannot appreciate it. It gives authors the power of hiding the plot till its denouement. Its size in La Fontaine is enormous. It is large in artists and actors. It enables actors to conceal their real characters and put forth the natural language of the assumed one, and without this the words might be repeated, but they would not be charged with the required feeling.

This is the head of Ann Ross, in whom, as you see, Secretiveness and Firmness are very greatly developed. She practised various deceptions for the purpose of exciting sympathy and obtaining relief; but her impositions being discovered she was discarded. She was shortly afterward admitted into Richmond hospital with her wrist severely ulcerated. Dr. Carmichael and others attended her, but no remedial course seemed to afford relief. At length the disease became so bad that amputation was proposed and submitted to without dissenting. On examining the arm afterward it was found full of needles which she had purposely stuck there. It is said that she appeared more mortified at the discovery of the trick than afflicted by the loss of her arm. They did not inform her of the discovery till after she had recovered, and when they did it struck her to the ground. I saw the woman after the amputation had been performed.

The natural language of Secretiveness is a furtiveness of look, a soft manner of speech, from suppression of other faculties or propensities, a close mouth, and eyes partly closed, leaving as small a chink as possible, enabling the owner to look out but preventing the world from looking in. Here is a French drawing called 'Hush:' the mouth is shut and the finger upon the

lip, but the designer, being ignorant of natural language, has left the eyes wide open. Nature never makes such mistakes. Observe this portrait of Fouché, Napoleon's minister of police, with his firmly closed lips and half shut eyes.

ACQUISITIVENESS.

This organ is situated above the fore part of Secretiveness, reaching, however, further forward. To prevent mistakes, bear in mind that it is backward and downward from Causality.

Metaphysicians do not admit that the desire to acquire is a primitive faculty of the mind. Love of property, they say, is merely a habit originating in the love of enjoyment, and afterward transferred by association to the means of procuring the enjoyment—which is as rational as to say that a man's love of a good dinner becomes, by long indulgence, love of a knife and fork. Lord Kalmes, however, who wrote from observation, recognises this faculty. 'Man,' says he, 'is a hoarding animal, having an appetite for storing up things of use.' Gall discovered it by comparing the heads of the peasants, whom he used to invite to his house, and who made him their confidant. He found some notorious for petty larcenies, and proud of their superior *savoir-faire*—others, who would rather starve than even partake of what their companions had stolen: in the first he noticed this part of the head to be much developed—in the last, to be comparatively small.

There are many periods of life in which we cannot labor, as sickness and old age. Now, if we were content with satisfying our present wants, and had no disposition to lay up property, what would become of us in the time of need? This faculty prompts us to accumulate, to store our surplus. By its aid, too, we gather around us the comforts, conveniences or elegances of life, which are parts of wealth.

This is the skull of Tardy, the notorious pirate. You see this organ immensely developed. This is the head of Heaman, executed at Edinburgh for piracy and murder. You perceive a great development of this organ. He saw a number of dollars put on board the ship in which he sailed; they excited his cupidity and haunted his imagination so much, that he did not rest until he had persuaded his ship-mates to assist him to take possession of the vessel. They did so, but were unable to manage it, and consequently it ran ashore on the coast of Scotland, and they were immediately arrested. This organ, as you may perceive, is very large in Hare, who murdered people for the purpose of selling their bodies. Owing to its large size in notorious robbers it has been called the *organ of theft*. This is just as appropriate as to call the stomach the *organ of gluttony*. Thieving is a manifest abuse of a propensity obviously given for wise and benevolent purposes.

In this, the skull of Agnes Clark, who assisted her husband to murder a number of persons for the sake of robbing them, it is very large. In the skull of Robert Bruce you perceive it comparatively small.

You have all heard of Robert Owen. That gentleman maintains that the institution of private property is wrong. Now, in his head this organ is very small, and benevolence large. And he has expended a property of ninety thousand pounds sterling, or between four hundred thousand and five hundred thousand dollars, in attempting to carry out his schemes of benevolence.

When Acquisitiveness and Benevolence are both large, the individual will show his kindness by personal exertions, by giving advice, by imparting the results of experience, rather than by giving money. Self-esteem and Acquisitiveness large, with Benevolence small, constitute the really selfish character. But a person in whom this organ is large, may acquire for the very purpose of gratifying large benevolence; and though eager in acquiring, have a hand open as day to melting charity.

Acquisitiveness is large in the Anglo-Saxon race, and this accounts for the eager pursuit and vast accumulation of wealth for which it is distinguished. We see around us overwhelming evidence of this organ's activity. For untold ages this vast country was inhabited by Indians, and a few personal ornaments and war instruments were almost the whole extent of their accumulations. The British race appeared—and cities rose, and roads were constructed, and the comforts and conveniences of life were gathered, where the wild beasts had been chased by men almost as wild.

This propensity takes its direction from the other faculties.

Combined with Destructiveness, it leads to crimes of violence for gain; combined with Secretiveness, it induces crimes of fraud; combined with large Ideality, Constructiveness and Form, it stimulates to collections in works of art, as painting and statuary; with large Eventuality, to collections of books, especially of history, memoirs and travels; with large Individuality, to collections of shells, insects and other specimens of natural history; with Veneration large, to the collection of antiques; combined with large Self-esteem, it produces a disposition to acquire and hoard; combined with large Approbativeness, it leads to admiration of the rich, and, if Conscientiousness and Benevolence be deficient, to contempt of the poor.

Acquisitiveness is small in the skulls of the Caribs, who never manifested any propensity to theft, and who always insisted, says Rochester, in his History of the Antilles, when robbed, that the crime was committed by a Christian. It is small in the Negroes, who are not much disposed to theft; and Gall says, that among the Spanish troops he found it small in the Arragonese and Castilians, and lying and stealing were unusual among them. It is large in the Kalmucks, who are incorrigible thieves. Dr. Spurzheim tells us that a young Kalmuck brought to Vienna by Count Stahrenberg became melancholy, because his confessor had forbidden him to steal. Seeing this he was permitted to do so on condition that he should give back what he had stolen. The young man profited by this permission, stole the confessor's watch during high mass, but joyfully returned it when mass was over.

This faculty when predominant is never satisfied. Its pleasure consists in acquiring—and this explains a puzzle in human nature which has attracted much attention. Men, on retiring from business, instead of finding that repose which they sought, that comfort and enjoyment toward which they had long looked forward with glowing anticipation, are restless and dissatisfied. Man's happiness consists in the activity of his faculties; and when this organ is large the other organs become habituated to work with it in associated activity. Taken away from the business which has constituted the daily stimulus of mind, there is a craving which nothing in retirement can satisfy. But when the moral and intellectual faculties predominate, the individual can glide easily and pleasantly from business to private life.

Sometimes this organ is so large that individuals in good circumstances give way to the temptation to steal. A barrister of Edinburgh was convicted of stealing books—and similar cases are on the records of all courts. A gentleman in good circumstances always pocketed, if possible, some silver spoons when he dined out. He was at last detected by the handle of a soup ladle peering out of his pocket.

This organ sometimes becomes diseased. Esquirol mentions a Knight of Malta who became addicted to theft in consequence of disease, and who not unfrequently refreshed himself in coffee-houses, and instead of paying, put the cup, saucer and spoon in his pocket and walked away. Arel mentions a young man who manifested an irresistible propensity to steal after receiving a wound in the temple.

The organ is found in animals. They have notions of private property. After a winter's absence, the stork will return to the same steeple, the swallow to the same roof, and the nightingale to the same nest which they before occupied. Vivmont remarks that it is large in the fox, ourang-outang and cat. He mentions two cats, in one of which it was small, and in the other large. The first would not steal except when very hungry; the other would do so on all occasions. He on one occasion urged it with as much fish as it would eat, and then left it in the room where a piece of veal was on the table: on coming in shortly after, he found that the cat had stolen it.

In observing this organ you must bear in mind that it is partly covered by the temporal muscle, and that allowance must be made for this muscle's thickness, which may be pretty accurately ascertained by putting the hand on the temple while the individual opens and shuts his mouth.

It is difficult to describe the natural language of this faculty; but after once seeing it well manifested it is not soon forgotten; when predominant it gives a lean, hungry, mean aspect, a one-sided, creeping, sneaking look, half-shut eyes and closed mouth. To use a common expression, such a man seems as if he could skin a flint. His hands often go out at the side as if bent upon grasping something.

[To be continued.]

EVENING CLOUDS.

See, where, fast sinking o'er the hills
As with a golden halo crowned,
The setting sun with splendor fills
Those massy piles that lie around
His couch, in crimson glory dress'd,
Like drapery o'er a monarch's rest!

Bright, fair, but ah! how fading too
Is all this beautiful array!
A moment given to the view,
Then past amid the gloom, away!
So like the gilded things of earth,
That charm the eye, though nothing worth!

And now eve's glowing star illumines
The chambers of the distant west,
And, scarce discerned, like waving plumes
That flash o'er many a warrior's crest,
There float along the upper air
Thin, fleecy clouds, so clear and fair!

How sweet to gaze upon their slight,
Transparent forms, changing so oft,
That e'en the zephyr's gentlest flight
Scatters them with pinnons soft,—
Seeming, as down the sky they go,
Like wreaths of gently driven snow!

And then, to trace the full orb'd moon,
As, struggling on her cloudy way,
She travels on, now wrapp'd in gloom,
Now bursting forth with undim'd ray,—
Like some high, noble heart, whose pride
Still bears him on, though woes betide.

S. H.

THE INNOCENT AVENGER.

BY PARK BENJAMIN.

Phocion. The name? why dost thou pause?

Ctesiphon. 'Tis Ien!

Ien. Well, I knew it would be mine!

Ien.—A tragedy.

Duelling is prohibited in the Netherlands by an express enactment. When, therefore, there springs up any demon of revenge which cannot be laid except by the shedding of blood, or when any infringement of the rigid precepts of the *code honorable* demands a waste of life, the parties are constrained to choose their ground, and pace their distances on the nearest spot of earth in the dominions of His Most Christian Majesty, the King of the French. It is now ten years since my friend Monsieur de Z—— was, at the age of fifteen, sent by his father, a wealthy merchant in Bordeaux, to learn book-keeping, in the busiest counting-room in Antwerp. The transactions of an European mercantile establishment occupy the greater part of the day before the dinner hour; after which, as it borders closely upon the evening, no ordinary business is suffered to intrude upon hours of rest or conviviality. No exert is the order of the counting-house from nine o'clock in the morning

until five after noon; and, except by leave, the subordinates dare not disobey the injunction; for the eye of a master is upon them, unless it has gone for a season, to read, in the many glances as keen and inquisitive as its own, the news and fortunes upon 'Change. But dinner is the Rubicon between business and pleasure, activity and indolence. When the sound is heard which gives warning of the approach of that most welcome event, the shadows begin swiftly to pass away from visages bending over huge folios and bundles tied with red tape, and the wrinkles which furrowed the most youthful brows give place to a bland and contented expression; and when at last the mists of care roll entirely away before the beams of joy, there may be heard, succeeding to the stealthy step and the suppressed whisper, a simultaneous burst of voices in quick merriment, hailing the hour of release with the exultation of sea-tossed mariners in sight of a favoring strand.

After dinner each day, it was the custom of the sons of the rich merchants—who were in Antwerp learning the art of making cent per cent far away from home, and from the indulgences always attached to that dear place—to assemble together in a large room in the coffee-house where they had dined. Here might be observed youths of all ages, from the tender, beardless boy, who had but recently arrived from some Spanish or French commercial mart, to the strong, mustachioed initiate, who was not to pass many more months in clerkship ere he assumed the difficult responsibility of a junior partner. My friend, de Z——, was of the former class. He had, however, been in Antwerp a sufficient length of time to contract a warm friendship for Auguste Forêt, a boy younger than himself, yet characterized by a demeanor, and distinguished for abilities, which had won for him the respect of every clerk in Antwerp. Auguste was but fifteen years of age, and the only son of his mother. That mother doted on him to distraction. He was literally the light of her eyes; for all things seemed dark since he had been no longer present to dispel the gloom of her lonely widowhood. Her story was, indeed, a romantic one. Herself the only child of one of the old French nobles, she had mortally offended her haughty father by a plebeian marriage with a young merchant, with whom she had become acquainted in one of those ways which nobody esteems unaccountable except the interested parties. In her solitary morning rides in the vicinity of her father's old chateau, she always encountered a stranger, whose walks chanced to be in a similar direction, prompted, as she thought, by an admiration like her own, for a wild sequestered glen, through which the path wound, overshadowed by century elms, and traversed by a silver brooklet. A cold and silent bow was the first approach towards a mutual acquaintance—a smile succeeded—and at last the stranger ventured a word about the beauty of the place. The lonely daughter of the haughty old marquis deigned a reply. It was not long before this conversation, which commenced like the first flowing of the brook at their feet, with a slender vein, widened into a broad stream, and finally settled into the lake-like repose of a deeply-felt and fully-expressed passion. Emilie was aroused to a lively sense of her indiscretion by a furious explosion of rage from her father, who, never having uttered an unkind word to her before in his life, now assailed her

abruptly one morning after she had returned from her accustomed ride, with a shower of invectives, which were quite as surprising and unexpected to her as a peal of thunder would have been from the unclouded sky that was smiling so lovingly above her. She did not faint, but she was petrified with fear and astonishment,—fear at the consequences of her father's anger, and astonishment at the possible manner in which he could have discovered her interviews with Henri Forêt. She had never till that moment reflected how those interviews were to terminate. Matrimony was an event to which they had not even alluded—so numerous and so absorbing were the other topics which love had presented to their imaginations. She had known from the first that Henri was not noble; he had told her that the nature of his pursuits forbade his associating with the guests who sometimes enlivened her father's solemn life in the chateau. But she had deferred further inquiries on that subject to the more interesting discussion of each other's views, habits, and feelings. When, however, she was so angrily greeted by her till now fondly doting parent, she comprehended the unavoidable consequences of her conduct at a single glance. She made not one word of reply; but when, at the expiration of his threats and denunciations, she was ordered to her chamber, she bowed meekly and retired. Emilie's feelings were not to evaporate, like those of ordinary heroines, in hysteria or impotent ravings. Her's was one of those decided characters which waited not for after-reflections to soften away positive determination. Her father had assured her of one fact, which fixed her mind as firmly in its resolve as her heart was fixed in its affection. After having reached her room, she wrote, and instantly despatched a billet—the effect of which was to bring a post-chaise and horses and Henri Forêt to the spot where the road ends in a gate that opens to the glen where the lovers had first met. The billet, which had such power, simply requested Henri to be ready at the hour of deep twilight near the old trysting-place, with equipage of travel; and to this request was appended the rather striking information that her venerated father had expressed his will that she should on the following day wed a nobleman as old as himself, to whom he had formerly betrothed her. Emilie had no leisure for tears, sighs, or repentance, till her lot had been indissolubly entwined with that of the young merchant by “a friar of orders gray,” who consented to administer unto them all the requisite formalities of his infallible church, after having had his conscience salved over with gold enough to have covered it, had it been as broad as by frequent stretching it had become long. Henri Forêt was a young man of a will no less decisive than his loving and beautiful bride's. He had, although she had not, long premeditated the step which had just been taken, and he had so arranged all things that, after the performance of the important ceremony, his “ladye fair” experienced no more inconvenience than if she had been wedded with customary pomp and splendor in the hall of her ancestors, and given into the arms of a magnificent bridegroom by a gratified father. She was, strange to say, quite as happy in a vulgar post-chaise rapidly wheeled over the space of some thirty leagues, as if she had been in a splendid coach drawn lazily by six fat horses. Before she had perfectly recovered her senses, she looked

around upon a very tastefully and elegantly furnished mansion in the Rue de —, Paris. The young merchant's partner in business had well obeyed his instructions. A house in the most delightful quarter of the most delightful city in the universe stood ready for the reception of the happy pair. Your man of trade does every thing systematically. The books of the house of *Arnold, Forêt et Co.* probably display at this day the charge of “a house and furniture” to the private account of M. Forêt.

Were I weaving the story of these lovers into a fictitious legend for the amusement of the sentimental, I should doubtless, attribute to them length and felicity of days. But alas! my pen has been dipped in the bottom of that well where truth lies, and I must write nothing but truth. The highly respectable firm of *Arnold, Forêt et Co.* met with many sad reverses of fortune, and finally stopped payment. So satisfied were the creditors with the honesty and ability of the partners, that they all cheerfully acquiesced in an adjustment of their demands, by which the house was enabled gradually to wind up its concerns, and not only to discharge all its debts, but to present to each of the partners a competent private fortune. This, however, did not satisfy the ambition of young Forêt. He had imbibed the nicest notions of commercial honor, and fancied that his misfortunes had dimmed the lustre of his own; though, to the eye of his friends, they had only been vapors upon the diamond—fading, almost as soon as perceived, from the purity of its brightness. It had been also the ambition of the young merchant to reach, by the potent aid of riches, those honors denied him by birth, and reinstate his wife in that rank from which he had removed her. His mischances swept his air-built castles into night. Not content to live, young and wealthy as he was, upon a small income, he accepted an advantageous offer to remove to the West Indies. Thither he embarked with his wife,—happy as when first she became his own,—and a beautiful boy, their only darling, who was now over six years of age. Forming in Martinique a new mercantile connexion, he lived in that island for seven years, and amassed a fortune which placed within his grasp the glittering prize for which he had been so long striving. On the fourteenth birth-day of the young Auguste, his father prepared to remove once more to Paris with his wife and child. But alas!—on the day when they were to have sailed, he was taken ill with a fever, induced partly by the excitement of his occupations, and partly by infection received in visiting the slave-hamlet, to bid adieu to his faithful negroes. From the moment he fell sick he was seized with a strong presentiment of death. The fever was not violent, and his affectionate and devoted wife vainly endeavored to divert the current of his melancholy thoughts. But the strangest effect of his illness was to alter all his ambitious projects—he expressed himself convinced of the folly of his worldly desires, and having received from his wife an assurance that she had been most happy in the station of life to which he had reduced her, exacted from her a willing promise that she would have the young Auguste, their son, educated to commerce at the house of certain friends in Antwerp, so that he should be the artificer of his own fortune. The presentiment of poor Henri Forêt was verified. He died, leaving all his large fortune to his

wife, to be disposed of as she pleased at his death. Few days elapsed before the heart-broken Emilie and her darling son were on the broad waters, returning to their beloved France. Scarcely had she arrived in Paris before she addressed her father, the old Marquis, who had not stirred from his chateau, informing him of all her misfortunes and of her present situation, and how heartily she entreated his forgiveness. Considering how rich she was, it is no wonder that she was again received into the arms of her doting sire. Old French Marquises do not dislike money. The father insisted, however, that she should not bring home with her that "sprig of commerce," as he called the young Auguste. As she had no intention of this originally—being determined, though it almost broke her heart, that, in compliance with the wishes of her husband, she would send their son to Antwerp for three years—she signified her acquiescence in her father's will; and, parting from her dear, dear boy, with many tears and blessings, she proceeded to her paternal domain, while he, under the charge of a faithful servant, departed for his school of commercial education.

How these facts came to my knowledge is, as a lawyer would say, immaterial to the point at issue. It is sufficient that I have related them for the purpose of enhancing the interest of a thrilling story, in which the young Auguste Forêt is a prominent actor, and to the truth of which, my friend, de Z——, can testify most solemnly, as he was throughout an eye-witness. The events happened ten years ago, and may be found by the curious succinctly noted in the chronicles of the day. Assembled in that large room of the coffee-house—where they had just dined, and where they were wont to assemble—at about six o'clock in the evening of a rainy Autumn day, were all the most respectable clerks of the first commercial houses in Antwerp. Some were sipping coffee, some were playing at dominoes, and others were discussing the various subjects of interest which for the time occupied their attention. About this hour, certain officers of a regiment stationed in the town were wont to resort to the coffee-house, and amiably mingle with the clerks in their diversions or conversation. This evening the officers had come in as usual, and the usual hilarity prevailed. Suddenly, from a corner of a room loud voices were heard, as if in angry discussion. All other tongues were instantaneously still, and all eyes were turned on the quarter from which the sounds proceeded. A quarrel was so unusual an occurrence, that it attracted universal attention. It afterwards appeared that the dispute arose about a horse, which had been purchased by one of the officers from a clerk who was about to leave the town. This officer, who was an Italian from Sicily, had, before then rendered himself peculiarly obnoxious to the frequenters of the coffee-room on account of his rude, boisterous manners, his insolent swagger and bravado. He was a tall, ferocious-looking fellow, mustachioed and whiskered in the *Fra Diavolo* style, and wore a rapier upon all occasions. On the present, the first words he was heard to utter, after blustering into the room, were—

"The horse I bought from Rodolph is unsound." Rodolph being a Swede and no craven, and knowing that the bully intended the remark for himself, coolly walked up to the speaker, and asked—

"Signor Alonzo, was that speech intended as a

question for my private ear and inadvertently muttered aloud, or was it spoken audibly for the edification of this good company?"

"They heard it, Master Rodolph, as well as you, and can hear it again if they list. The horse I bought from you is unsound."

"You oblige me, Signor Alonzo, by your frankness. Will you reply to my second query of, whether you mean to insinuate that I sold the horse to you knowing him to be defective, or whether he proved, unwittingly to both buyer and vender, unsound?"

"I mean what I mean;—when a jockey sells a horse to a gentleman, and he proves broken-winded or spavined, or false-footed, the inference as to the jockey's honesty is easy."

At this period of the conversation the eyes of all in the room, both officers and clerks, were turned upon the disputants.

"Gentlemen!" said Rodolph, facing those present, "you are, the most of you, well acquainted with me and with my claims to the title of a man of honor. I shall hold no farther parley with this bully in a soldier's dress, but simply state to you that I yesterday sold him a horse at his earnest solicitation, assuring him at the time that I was no judge of the animal, that I had owned the one in question but a short time, and that he must depend on his own judgment, if he chose to give me the price which I paid for the beast a fortnight before. He took the horse, and now accuses me of being privy to his unsoundness"—Here several voices interrupted Rodolph with "Shame! shame! fie, Signor Alonzo!" "I do not wish, gentlemen," continued Rodolph, "that you should assume my quarrel or invidiously judge between us. Although I said that I should hold no further parley with this bully, I did not preclude myself the privilege of pulling his nose," Saying which, and suiting the action to the word, the impassioned Swede suddenly grasped the nasal protuberance of the officer, and wrung it with surprising effect; for, at first, the Italian bravo recoiled, and the natural ruby of his visage abdicated in favor of a pallor, which was in its turn driven forth by a blush, which succeeded the shame of palpable cowardice exhibited before so large a company. With the velocity of thought, Signor Alonzo's rapier leaped from its scabbard and desperately darted towards the breast of Rodolph, who, with a velocity no ways inferior, clenched the wrist of the arm that wielded it, and, wrenching the weapon from its infuriated master, coolly took the point in one hand and the hilt in the other, and broke it in twain across his knee. This movement not only proved that the officer was as unsuccessful in the purchase of rapiers as of horses, but that his strength was disproportionate to the greatness of his size and the volume of his voice. It was hailed with a general shout, as Rodolph, throwing the *disjecta membra* of the sword out of the window, walked slowly from the apartment. This departure broke up the assemblage. The clerks, among whom were my friend, de Z—— and Auguste Forêt, retired to their several homes, and Signor Alonzo, boiling with wrath, marched off with his brother officers to his quarters.

Every one anticipated a bloody termination to this business, but none more calmly than Rodolph. He said that he was well aware that he had provoked

almost certain death; for he was no master of fence, and had never fired a pistol a dozen times in his life. De Z—— was a friend of Rodolph, and late in the evening resorted to his apartments. He found Rodolph alone sitting by a fire, reading a German translation of Shakspeare. "Ah, De Z——! I am glad to see you—this English author is the most wonderful of all the poets. I cannot read him in the original, but it strikes me the German must be almost as good, for nothing could be better. Here is a most amusing scene between a Welsh captain and an English bullying ensign called Pistol. The Welshman forces the valliant swaggerer to swallow a leek. The scene has amused me, for it reminded me strongly of this evening's rencontre. I wish I had read before of the great Captain Fluellen's valor—I think it would have augmented my own."

De Z—— sat by his side, and entering cheerfully into conversation, the evening had almost glided away, when the servant announced an officer as asking admittance. "Certainly," said Rodolph, "I can be seen;" and turning to de Z——, he simply observed—"The challenge!" The word was scarcely spoken before the officer stepped into the room, and placed Don Alonzo's cartel in the already extended hand of Rodolph. "After the insult received by my friend Signor Alonzo, Monsieur Rodolph, the honor of our regiment requires that blood should be spilt,—in what way will it be most agreeable to you to kill or be killed by Signor Alonzo? and when?"

"I have expected this honor," replied Rodolph, "and will meet your friend the day after the morrow, at noon, over the French border, at such particular spot as my friend Mons. de Z—— shall with yourself determine upon. My weapon is the pistol."

Here M. de Z—— arose, and settled with the bearer of the challenge the place and other necessary preliminaries. The three then separated for the night, but the next day saw them—the challenger and the challenged—on their way to the fatal spot, where they could meet without fear of molestation from the minions of the law. It was in France, beyond the constituted authorities of Ghent. None were present on the ground save Don Alonzo with his friend, and Rodolph with his friend (and my friend and narrator) de Z——. The requisite coolness was displayed on both sides. Alonzo, though a downright coward and bully, and one who would probably have shown the white feather in a general *melée*, seemed perfectly unconcerned. His self-confidence was greater than his natural fear. He was sure of his man. He could snuff a candle at twelve paces. The words of command—"one, two, three," were given by de Z——. Alonzo fired instantly that the word "two" was spoken, and his ball lodged directly under his antagonist's right shoulder; the shock causing a harmless discharge of Rodolph's pistol. Rodolph fell, and was borne by de Z—— and Alonzo's second to the carriage which stood in readiness, and in which he was slowly re-conveyed to Antwerp. The surgeon who extracted the ball pronounced his patient out of danger, if he could be kept in quiet. The clerks, who had hastened to ascertain the result, were pacified, and no danger was apprehended. De Z—— was indefatigable in his attentions to Rodolph, who, now that the affair was over, exhibited none of his former coolness. He raved, he stormed, he called Signor Alonzo

a villain for firing before the word, and a bloody wretch for wishing to murder a fellow-creature on account of a miserable brute of a horse; he tore the bandage from his arm—it was replaced—still he tore it away. No persuasions could mollify him. The result was a high fever and delirium. From his confessions in the latter, it appeared that he was under an engagement to be married to a young lady to whom he had long been fondly attached, and that the day appointed for the ceremony had already gone by. This involuntary violation of a sacred engagement on his part, seemed to have preyed upon his mind, and to have induced all his wild behavior. So great and so frequent at last became his paroxysms, that the surgeon announced the certainty of his death within twenty-four hours unless a change was manifest. In a less time a change was manifest; but such a change! He became suddenly sane. He exhibited his characteristic coolness. He called his friend to his bedside, and thanking him tenderly for all his kindness, said that he had one request to prefer, which he begged might be granted, as it would be his last. He said that he felt he was dying, and that he wished to spend a portion of the small remnant of his life in company with his dear old friends and associates. He wished all the clerks, who were in the coffee-room on the evening of his unhappy fracas, to assemble around his bed. It was then afternoon. In the evening de Z—— went to the coffee-house, and finding the clerks congregated, as usual, stated Rodolph's dying request. They all—every one who was present on the occasion of the quarrel—adjourned in a body to the lodgings of their dying companion. They were preceded into the chamber by de Z——, who mentioned their approach. Rodolph's eyes lighted with supernatural fires as he saw them all, the very youthful and the more advanced in age, gather around his couch. There were thirty-four present; with all he was familiarly acquainted; with all he had lived on terms of kindly friendship; with all except one, and that one was Auguste Forêt. So recent had been the arrival of Auguste, and so retired were his habits of life, that he could hardly be said to have a bosom-friend among all the clerks. All loved and esteemed him, however; for he did not shun society, but shrunk from contact with a sort of feminine sensitiveness which he vainly endeavored to overcome. Having always lived under the affectionate care of his mother, he had never learned that forwardness of manner which boys call manliness. When Rodolph's earnest request was communicated that the clerks would visit his chamber, Auguste doubted the delicacy of a stranger's intrusion at such an hour. He had never spoken to Rodolph. When he reflected, however, that the request was that *all* who witnessed the fracas should be present, he hesitated not to accompany the rest. The thirty-four stood in order around the sick youth's bed. Sorrow, deep sorrow was impressed on every unfurrowed visage, as they heard the dreadful words uttered in hollow tones by their late joyous comrade.

"Brothers," said he, "I am murdered, basely murdered. The wretch lives who brought me to this pass. I shall die before morning. He will be alive; all will be dark to me. He will see the pleasant sun; all will be silent to me. He will hear the birds, and oh! your voices—your dear voices. I did not provoke his insult, but I could not brook his ruffian bravado. He called

me to fight him. What was his life worth? Nothing. He dies, and his paltry pay goes to a better man. I shall die just as I become of age—now that I am twenty-one—the very day that I have looked forward to with such thrilling anxiety passed by me on this wretched bed! My fair domains on the borders of my native river will go to a distant relative. My fair”——here his emotions choked his utterance, “but this is unmanly. I do not wish to make you weep. No!” starting up with convulsive energy, and assuming a terrible expression, which was never forgotten by those present. “No! I wish to incite you to revenge! Swear to me—or I shall not die in peace; swear that you will revenge my death!”

The right hands of every one in the room were raised up, and every one, borne away by the strong excitement of the moment, uttered “I swear!” Rodolph’s head sunk for a moment on his pillow; and when he rose again, his face was calm. Some one present proposed that they should on the instant draw lots, or rather that all their names should be written on slips of paper, and the name drawn by Rodolph should signify his avenger. To this a general consent was given; and a smile of satisfaction played over the pallid features of the dying youth as the names were written and cast into a hat. He rose once more, but for the last time, on his pillow, and placing, with painful effort, his left hand among the names, drew forth one which he handed to the nearest by-stander to read, and which when read, sounded like a knell on every ear. It was AUGUSTE FORÉT. “No! No! this will never do!” exclaimed every voice but two. “This will never do—Auguste is a mere child—he is hardly one of us. Let Rodolph draw again.” They turned to Rodolph. He was dead. Horror struck them dumb. Auguste was the first to break the silence. “Companions, the lot cannot be drawn again; and if it could, it should not. I came voluntarily to this meeting, and I will abide its event. I never knew yonder poor departed; but I know his wrong, and I came of my own free will to witness his death. I am no craven. My mother’s blood runs in my veins, and she was a noble’s daughter. My father’s blood runs in my veins, and he was one who got, as my mother told me, his patent of nobility immediately from Almighty God. He was, moreover, a merchant. I am to be a merchant. Shall I forfeit the first pledge I have given? Break my first contract? No; I took my fair chance. My duty is plain!”

The clerks did not, however, cease their remonstrances, although quite fruitless. They separated with heavy grief upon their hearts, feeling more sorrow for the luckless instrument of vengeance than he did for himself. He thought only of his mother. He knew that his death would break her heart; but he solaced himself with the reflection, that if she died, they would meet the sooner, never more to be parted. His thoughts were all wrong. He mistook his duty: but he acted nobly, and, with some misgivings, conscientiously. “I am,” said he to de Z——, as he handed him his written cartel to Signor Alonzo, “a most innocent avenger.” His companion refused peremptorily to carry the challenge. He begged and entreated Auguste to allow him to fight the duel. Rodolph was his friend—he was Rodolph’s second—it was his right. Auguste was immovable. The cartel was sent by

another hand. “You will, at least,” said Auguste, “be present with the rest at my execution.” De Z—— turned away, and saw him not again until the same thirty-four met once more on the fatal spot where Rodolph had received his death-wound. Before that time, however, a fearful interest had attached itself to Auguste. He was looked upon as doomed. The clerks had taken an oath not to divulge the secret, or the arm of the law might have averted the catastrophe. They all hovered about Auguste. They were with him day and night, half drowned in tears, and half roused to indignation at his obstinate firmness of purpose. Every one swore to revenge him if he fell; but this he did not require. Nay, he entreated them to proceed no further after his death. Vindictiveness could not be felt by that calm, sweet, yet bold spirit. When parts of his history became known, he became an object of intense interest. All his friends—and who among that number was not now his heart-devoted friend?—said they would go to his mother, and be her sons. He begged them simply to convey to her his love, his last kiss, and a letter that he would write. How many a weary mile would I journey, what fatigues would I not endure, to see that letter? It must have breathed the soul of pathos. All things were prepared. It was a pure autumnal morning. Some breath of summer still seemed to linger on the breeze. The birds poured out their matin hymns in a clear, rich strain of melody. To an opening in a broad forest, that wove elsewhere a roof of foliage beneath the sky, a party of youths might have been seen slowly winding their way. They were followed by a boy, who had evidently not seen his sixteenth spring. He was a mere stripling. His figure was so slight, but yet so symmetrically fashioned that, while you doubted that if so lovely a face could belong to a young man, you felt assured that the form could not be a woman’s. His eye was bright and steady, and he trod with a firm step. When the party halted, the serious expression which every countenance wore gave place to its opposite of joy. “It is the hour appointed,” exclaimed one, “and he is not here!” “Wait!” said a calm voice. The speaker was the beautiful boy. It was Auguste Forêt. An interval elapsed. “It is past the time,” exclaimed another; “Signor Alonzo has decamped.” “Not so speedy, my brave fellow,” exclaimed a gruff voice from behind; “not so speedy, we shall see presently who will decamp to h—ll!” The youthful party turned, and saw the antagonist whom they had come to meet, accompanied by half-a-dozen companions dressed in the uniform of the officers of the —— army. One of these stepped forward, and addressing the whole party, said, that understanding the challenger’s friends were to be present they had come as the supporters of the challenged; and that, as the challenged, they claimed the right of prescribing the form of the duel, and the more especially as Signor Alonzo had yielded the choice of weapons to Monsieur Auguste on account of his extreme youth. They claimed, and would insist on, alternate fires—that a piece of money should be tossed up for the first fire. To this the friends of Auguste readily acceded, as they thought he might chance on the first shot, and thus destroy his antagonist. It was true that Alonzo was a celebrated marksman. He could wing or kill his antagonist at his pleasure. He had been suc-

cessful in a dozen duels. They were every-day matters to him. Auguste had never fired a pistol skilfully in his life. He had not the nerve to hold one steadily for a moment. He had practised within the past week, and could never hit the mark. His only possible escape from death was his having the first shot. The distance was marked and the parties stationed. It was a fearful sight to behold that fair, spotless young man, standing up in his loveliness as a mark for the brutal sport of the soldier-ruffian before him. Auguste had thrown aside his cap, and freely over his head clustered the rich, wavy curls. In his right hand, suspended at his side, he held the pistol; in his left, his letter to his mother. His countenance betrayed no unusual expression. His lip did not quiver, nor did his cheek blanch. The ridiculousness of his situation seemed to strike even the ruffian, Alonzo. "I will not fight a child," said he. "You are a coward!" said the calm voice of the child. "Go on!" said the other. "Alonzo has the crown," said his second. The piece of money was twirled into the air—it fell—the crown was uppermost. It was the soldier's first shot. "Now, young sir, pray, for your hour is come!" Every eye turned to Auguste. He smiled. Slowly went the soldier's pistol to its deadly level. The report was heard, the slight smoke passed away, and the limb of a sapling fell to the ground. Auguste still smiled. He was unhurt. When my friend de Z—— told me of this, I asked him if his party shouted. He said, "No! there was one long, low breath." Auguste now raised his pistol, but carelessly, and his hand shook. The soldier's face was as livid as death. Suddenly, and evidently to the perfect surprise of Auguste—for he started back—the pistol went off. Signor Alonzo leaped upwards with a convulsive spring, and fell on his face to the earth—dead. "All fair!" said his friends, and as they took up the body, those who turned to look after Auguste were just in time to hear him say, "I did not intend to fire!" and to receive him fainting in their arms.

Was all this directed by a special Providence? Is there not "a special Providence in the fall of a sparrow?" Will my readers ponder over these questions? If they will do so, my story will not have been told in vain. Its sequel was, that on the return of the happy party of clerks to Antwerp, they found the death of the officer had been published in the Gazette, together with the name of his opponent. Auguste, fearing the effect of such news upon his mother, departed with speed for his ancestral chateau, which he entered, in spite of his grandfather's prohibition. The old Marquis was furious at first, but when he had heard all the particulars of the encounter, he comforted his aristocratic conscience with the assertion that there was not a drop of commercial blood in the boy; but that he was a true sinew of the old stock, and should inherit, as he richly deserved, the title and estates of the family.

DANCING.

A portion of the pleasure taken in dancing, consists perhaps in the individuality of possession existing between two partners.

TO THE MEMORY OF L. E. L.

Rest, gentle spirit, rest—
From every sorrow free;
The ills that wring the feeling breast,
No more shall torture thee.
Oh for thy magic lyre,
With its entrancing lay!
Oh for thy spirit's liquid fire!
To hymn one strain for thee.

Then should the listening soul
Dissolve beneath the strain,
Enchanted by the sweet control
Of a delicious pain.
But my poor harp is sad,
And faltering in its tone;
Its wreaths have blossom'd in the shade,
Rude winds have o'er it blown.

And I have learn'd to feel
For many a cruel woe,
With which the worldly heart of steel
No sympathy can know.
To sorrow for the lot
So oft to genius given,
Which proves the gifted spirit not
At home, this side of Heaven.

Sweet spirit! I have heard
Thy soft complaining note,
Like wailing of a lonely bird,
On balmy zephyrs float.
So plaintive was the strain,
So gentle in its woe,
The listener almost blest the pain
That bade such numbers flow.

The sickness of the heart
That pines with hope deferred,
Stole from thy lyre, with chasten'd smart
In every tone and word.
Then came a choral sound,
Of rich and hymning lays;
Thy love, thy cherish'd hopes were crown'd
With Joy's luxuriant bays.

But now a solemn knell
Comes booming o'er the sea;
And sadly chanting spirits tell
A bitter tale of thee.
"The gifted one has died
Upon a foreign shore!—
Her magic harp, old England's pride,
Is crush'd forevermore!"

And shall we weep that thou
Wast summon'd to depart,
With fresh young laurels on thy brow,
And rapture in thy heart?
With Joy's full chalice press'd
Unto thy smiling lip—
While fame and honor gave their zest
To every nectar'd sip?

That thou hast pass'd away,
 In young life's joyous bloom,
 E'er disappointment or decay
 Had told the mourner's doom?
 That thou hast scap'd the fears,
 The agony, the dread,
 The bootless hopes, the bitter tears
 By fond affection shed?

The painful yearning strife
 Of Nature with her foe,
 While o'er the last bright chain of life
 His hand suspends the blow?
 The dear ones' agonies,
 As round the bed they kneel?
 The bitterness of death are these,
 And these thou didst not feel.

We will not weep for thee,
 Sweet dweller of the heart;
 Thou needest not our sympathy,
 Bright seraph as thou art.
 For us who yet remain,
 Be poured the tear, the sigh,
 'Tis ours to mourn, to writhe with pain,
 To agonize, and die.

To him whose love thou wert
 So many weary years,
 Who droops with lone and stricken heart,
 To him belong our tears.
 Be thou his angel still,
 As in the days of yore;
 A beacon o'er life's billowy swell,
 To where love weeps no more.

LYDIA JANE.

TO THE EDITOR OF THE LITERARY MESSENGER.

VENCLUSE, August 5th, 1839.

Mr. White :

Having been appointed by the Historical and Philosophical Society of Virginia, to deliver the annual address at their last meeting, the outline of the following essay was prepared for that purpose during the last summer. Before it was completed, I was attacked with disease which confined me during the whole winter, and from the effects of which I have only recently recovered, so far as to be able to turn my attention to the subject. Having been prevented by this cause, from appearing before the society, I informed them, through their secretary, that I would publish, as soon as I could prepare it for the press, the address which I was appointed to deliver to them in person. I now comply with that promise, by offering it to the Messenger. It has already, from unavoidable causes, been too long delayed, and my consequent reluctance to delay it any longer, induces me now to present it in a form more crude than it might otherwise have borne.

A. P. UPSHUR.

DOMESTIC SLAVERY,

As it exists in our Southern States, considered with reference to its influence upon free government.

The people of the southern states are as strongly attached to their peculiar institutions and usages as are those of any other part of our country. This feeling, however, appears to be, with them, little else than a mere filial instinct, which, although always strong and always active, is never ostentatiously displayed. Our peculiar systems have seldom been subjected to that

analytic and philosophical examination, which is necessary to a proper understanding of their true character. Satisfied that the machine was working well, we have, hitherto, evinced but little curiosity as to the principles upon which it was constructed, and little inclination to inquire by what springs it was put in motion, or how it produced its results. Within a few years past, however, circumstances have forced upon us a more minute and careful examination of the various questions which arise from the institution of domestic slavery.* The subject is peculiarly interesting to us, and demands from us, the calmest and most dispassionate examination. Domestic slavery is the great distinguishing characteristic of the southern states, and is, in fact, the only important institution which they can claim as peculiarly their own. It enters into all their constitutions of government, and is intimately blended with their ordinary legislation. It is, in truth, the basis of their political systems, and exerts a powerful influence in moulding and modifying both their institutions and their manners. It becomes them, therefore, to understand it correctly and fully. Assaulted as it has been from abroad, and not always defended with proper zeal at home, we ought not to be surprised, if the tendency of the public mind should be against it. Even among ourselves there has not been until recently, an entire concurrence of opinion upon the subject. We have been in the habit of contemplating it rather as a domestic than as a political institution, and of course our judgments have not been altogether free from the influences of our private habits, our passions and our peculiar tastes. It is fortunate for us that we are no longer permitted to view it, in so imperfect a light. It is as a political institution that it possesses the highest interest to us, and in that character only I propose now to consider it.

That political liberty can co-exist under the same government with the personal slavery of a particular class of the people, is apt to strike the mind as a strange political paradox, if not as a plain impossibility. Yet, however the judgment may be deceived by the proposition at first view, it will not be seriously puzzled upon a closer examination of it. The subject is far too vast to be treated, in all its bearings, in an address suited to this occasion. It is full of a deep philosophy, whose sources cannot be easily explored nor speedily exhausted. History too, abounds with illustrations which could not be properly omitted, in a full discussion of the subject. On the present occasion, however, it becomes me to confine myself within much narrower limits.

It does not depend solely upon constitutions and laws,

* The agitation of the subject by our own legislature, gave occasion to the able pamphlet of President Dew, of William and Mary College, in which he traces the institution to its true source, rests it upon its proper principles, and demonstrates the impracticability and utter hopelessness of all attempts at general emancipation. More recently, Judge Harper of South Carolina, has considered the subject with reference to its moral influences, and has clearly shown, that those influences are alike happy, upon the character of the master, and the comfort and well-being of the slave. Subjects which those gentlemen have so ably discussed, could not derive any new illustration from me. They have left nothing which need be said in support of their respective positions, and nothing which can be said to overthrow them. Neither of them, however, has made the political bearing of the institution, his particular theme, although both of them have touched it incidentally. I therefore shall have no occasion to trespass upon ground which they have pre-occupied.

whether a people shall be free or not. They must desire liberty in order to win it, and they must understand and appreciate, in order to preserve it. The will alone may achieve the conquest, but something more is necessary to maintain it. The history of the world, and even the world at the present day, presents many melancholy instances of nations, who, in a moment of enthusiasm, have shaken off the yoke of the oppressor, but who have soon fallen back into their pristine condition of slavery, because they did not know how to preserve the blessing they had won. - A nation that is not prepared for freedom, will find freedom no better than a poor and perishing boon. It depends on the character of a people, and on that alone, whether they can live under free institutions or not. The love of liberty must be felt, not as a mere impulse of the mind, but as a rational sentiment, the result of a just appreciation of its value. Every man loves liberty, but a few only, even of those who enjoy it, understand in what true liberty consists. Still, however, it possesses a charm to which even the most ignorant and abject of our race are not insensible. It is in our very nature to abhor restraint, and to endeavor continually to resist it and shake it off. So strong and so universal is this feeling, that civil government itself would never have been established but for an overruling necessity. However capable men may be of governing themselves, or rather of governing one another, when organized in political communities, there are very few who can properly govern themselves as individuals. Without the restraints of law, we should all be very apt to run wild with our passions, and the weak would become the slaves of the strong, from the very excess of liberty. Civil government springs out of the ignorance, the vices and the passions of men. In proportion as these abound and are prone to run into excess, the restraints of law become necessary. We are reconciled to these restraints, and submit to be governed only because our own experience proves to us that we gain by these concessions more than they take from us. We maintain government, not as a positive but as a comparative good; we love it, not because it confers blessings upon us, but because it guards us against evils. Government gives no rights, but it takes rights away. The true problem, then, is to discover which of these rights it is necessary to restrain, and which may safely be left to the people. Governments differ from one another in their degrees of freedom, only as these restrictions upon natural liberty are fewer or more numerous. And as these restrictions are rendered necessary only by our passions and our vices, it is obvious that there can be no high degree of public liberty without a corresponding degree of public virtue. Hence it is a received maxim, that the virtue of the people is the basis of republican government. But the virtue which is here meant, is not the mere absence of great vices, nor the soft social virtues of private life. Liberty, which is itself great, elevated and pure, can find a safe foundation only in the corresponding qualities of the people.

These *truths* are perfectly familiar to the mind of every one who has bestowed any attention upon the subject of government. I refer to them, because they are the foundation of all just reasoning upon the question before us. No government, not upheld by actual force, can long endure, unless it be adapted to the cha-

acter of the people. Government in its turn, however, exerts a powerful influence in the formation of that character; a truth not always duly regarded in the establishment of political institutions. These should always be such as to inspire in the people, feelings corresponding with their own nature and principles. Of this character, in an eminent degree, is the institution of domestic slavery, as it exists with us. Its influence upon the mind and feelings of the master, is such as to prepare him for the love of freedom, and to fit him for the enjoyment of it. Where slavery exists, it is, as Mr. Burke remarks, "not only an enjoyment, but a kind of rank and privilege" to be free. This remark, which is true of all conditions of slavery, is peculiarly true of slavery as it is in the southern states. Here the slave is black, and the white man never is a slave. The distinction addresses itself to the eye, and is proclaimed wherever the two classes appear. It is certainly well calculated to inspire the humblest white man with a high sense of his own comparative dignity and importance, to see a whole class below him in the scale of society. However poor, or ignorant or miserable he may be, he has yet the consoling consciousness that there is a still lower condition to which he can never be reduced. He sees, continually around him, men whose inferiority to himself is acknowledged, whose rights and privileges are less than his own, and between whom and himself there is an impassable barrier, which every white man, however proud his condition, is interested to preserve unbroken. In this inferior class, he is accustomed to contemplate the worst vices and the most degrading habits and manners of our nature. But to this class he feels himself superior, and he is conscious, at the same time, that he can boast of no greater distinction. This reflection can scarcely fail to elevate his character, to inspire him with self-respect, to teach him the true value of that liberty by which he is distinguished, and to give him a strong abhorrence of those vicious and dishonoring habits, which he is accustomed to regard as the characteristics of the slave.

In our slave-holding communities, the white man, whatever be his condition, is accustomed to exercise absolute authority over the negro, and to receive from him continual proofs of deference and respect. This single fact is enough to elevate his character, to impart dignity to his manners, and to inspire him with a degree of self-respect, which will render him extremely jealous of any encroachment upon his own rights. He will not readily feel towards others the same servility which is daily shown to himself; he cannot be easily persuaded to yield the proud distinction of a master, by becoming himself a slave. The best foundation of political liberty, is personal independence and self-respect; and these feelings are necessarily inspired in a high degree by the very nature of the relation between master and slave. It is not an easy thing to make political slaves of men who are admonished every hour, not only that they are personally free, but that their freedom confers upon them at once, rank, dignity and power.

It is a just remark of president Dew, that slavery in the United States has produced an equality among white men "as nearly as can be expected or even desired in this world." Indeed, it could not well be otherwise. Men who share equally in one great and ennobling distinction, are not apt to acknowledge among one

another those of minor importance. All classes of white men are alike interested to maintain this distinction. It is a boon which they hold in common and which no one of them can enjoy, without, at the same time, securing it to all the rest. Hence arises a sympathy among white men, extremely favorable to republican equality. Accordingly we know, that throughout the southern states, where slavery prevails, there is a remarkable independence, freedom and equality among all classes of the whites. There is not, it is true, much of that rude and levelling democracy, which seeks to establish a perfect equality, forbidden by the very nature of man. I shall presently have occasion to show that this agrarian principle, so hostile to true liberty, and so fatal to free government, can never prevail to any considerable extent in slave-holding states. The equality of which I speak, is the equality established by the laws, the manners and the institutions of society, and which displays itself in the fearless address which proceeds from a proper self-respect—in the intercourse, free without rudeness, and respectful without humility. This is, indeed, the character of every society in which negro slavery prevails. We are told by Bryan Edwards,* that in the character of the British West Indian "the leading feature is an independent spirit, and a display of conscious equality throughout all ranks and conditions. The poorest white person seems to consider himself nearly on a level with the richest, and emboldened by this idea, approaches his employer with extended hand, and a freedom, which, in the countries of Europe, is seldom displayed by men in the lower orders of life towards their superiors. It is not difficult to trace the origin of this principle. It arises, without doubt, from the preëminence and distinction which are necessarily attached, even to the complexion of the white man, in a country where the complexion, generally speaking, distinguishes freedom from slavery. Of the two great classes of people in most of these colonies, the blacks out-number the whites, in the proportion of seven to one. As a sense of common safety therefore unites the latter in closer ties than are necessary among men who are differently situated, so the same circumstance necessarily gives birth among them to reciprocal dependance and respect."

Mr. Burke, in a speech delivered in Parliament, in March, 1775, expresses himself thus:—"Where slavery is established in any part of the world, those who are free are by far the most proud and jealous of their freedom. Freedom is to them, not only an enjoyment, but a kind of rank and privilege. Not seeing there that freedom, (as it is in countries where freedom is a common blessing,) may be united with much abject toil, with great misery, with all the exterior of servitude, liberty looks among them like something that is more noble and liberal. Thus the people of the southern colonies of America, are much more strongly, and with a higher and more stubborn spirit, attached to liberty, than those to the northward. Such were all the ancient commonwealths; such were our gothic ancestors; such in our days, are the Poles, and such will be all masters of slaves who are not slaves themselves." Burke did not live in a slave-holding country, nor did he speak to a slave-holding people. His views are those of a pro-

found statesman and an enlightened philosopher, who had deeply studied the nature of man and the principles of government. The sentiments I have quoted, were uttered more than sixty years ago, and yet he could not have more accurately represented the present condition of things in our slave-holding states, if he had drawn from them as his original.

The views of president Dew, are in the same philosophic spirit. "The menial and low offices," he remarks, "being all performed by the blacks, there is at once taken away the greatest cause of distinction and separation of the ranks of society. The man to the north, will not shake hands familiarly with his servant and converse and laugh and dine with him, no matter how honest and respectable he may be. But go to the south, and you will find that no white man feels such inferiority of rank as to be unworthy of association with those around him. Color alone is here the badge of distinction, the true mark of aristocracy; and all who are white, are equal, in spite of the variety of occupation."* Thus the testimony of the historian attests the soundness of the reasoning of the speculative philosopher; and both concur in proving, that negro slavery tends to inspire in the white man a strong love of freedom, to give him a high estimate of its value, and to inspire him with those feelings of independence, self respect and proper pride, which fit him for the enjoyment of free institutions, and teach him how to preserve them. The government receives its form from the people, and gives to them, in turn, a character corresponding with its own; and this happy adaptation affords the best possible security for the preservation of liberty.

As the virtue of the people is the basis of republican government, that condition of society is best adapted to liberty which is most favorable to public virtue. This preëminence may be justly claimed for the agricultural state. We love the trees which we plant with our own hands and nurture with our personal care; we love the land which receives our daily toil, and repays us in rich returns of food, clothing and other comforts. The love of country is but the love of home, expanded and enlarged. Nor is this a wavering or transitory feeling. The owner of the soil looks to it as the resource of his life, as the shelter of his age, and as the depository of his ashes. His affection for it is among the first impressions of his infancy; it goes along with him to manhood, growing with his growth and strengthening with his strength; and when he dies, the last wish of his heart is to give to his children the home which has sheltered them. It is true, that patriots may be found

* The utility, and indeed the necessity of some outward and visible mark of distinction, between the slave and the free man, has been felt by most, if not all nations, among whom domestic slavery has existed. Even in the earlier feudal ages, we are told that "slaves were distinguished from free men by a peculiar dress. Among all the barbarous nations, long hair was a mark of dignity and of freedom; slaves were for that reason obliged to shave their heads; and by this distinction, how indifferent soever it may be in its own nature, they were reminded every moment of the inferiority of their condition." (Robertson's introduction to the history of Charles V., page 168.) If there be any advantage in such a distinction, it is doubly advantageous when established by nature. There is then no reason to complain of the master's injustice, or to tax him with cruelty. The slave regards his degradation as the fiat of God; as an evil not brought upon him by the tyranny of his master, and from which no effort of his own can relieve him.

* History of the West Indies—vol. 2, page 8.

in every rank and condition of society. They are not confined to any one locality, nor to any one pursuit. But those who own the country, are most apt to love it; those whose interests and occupations chain them to the soil, are most ready to defend it. "The shocks of corn," said Xenophon, "inspire those who raise them with courage to defend them; the sight of them in the fields, is as a prize exhibited in the middle of the theatre to crown the conqueror." Men so circumstanced, are not "light to run away." They are themselves the country, and their attachment to it is as strong as their own self-love. While, therefore, patriotism may be found in every class and every pursuit of life, it is in a peculiar degree the characteristic of the owners and cultivators of the soil.

Patriotism, however, although it is the highest, is not the only virtue, to which the agricultural state is favorable. The independence of that life, its ease, its abundance, its quiet uniformity, its retirement, and its comparative exemption from those temptations which disturb the balance of our minds, and call our worst passions into play, all point it out as the best school both of public and private virtues. The love of display, the rivalry of fashion, the ostentatiousness of wealth and the strifes of ambition, will exist, in greater or less degree, in every form and condition of society. But these turbulent passions do not find their proper theatre amid the shades of rural retirement; they do not readily enter the bosoms of men, who are inspired, alike by their position and their pursuits, with a love of quietness and peace.

It may then be noted as among the happy influences of domestic slavery, as it exists among ourselves, that it tends to keep us, as we now are, an agricultural people. The farm is the proper position of the slave. It is true that recent experience has shown that slave labor may be profitably employed in manufactures and in the various mechanic arts; but the number which can be so employed, must be comparatively inconsiderable. The very physical structure of the African, renders it impossible to confine any great number of them together, in the close atmosphere of a manufactory, without certain destruction to their health. And even if this were not so, the demand for such labor must always be too limited to give employment to more than a very small proportion of the slave population in countries where that population is large enough to give character to the institution. Not so with agriculture. Its demands for labor are not easily supplied. In no one state of our Union, has there been, at any time, a redundancy of slave labor; on the contrary, in all of them large portions of their soil have been left uncultivated and profitless, for want of that labor. It has, it is true, often been misapplied, and for that reason has become unprofitable and apparently redundant. But there never was a time when the soil of any one of the southern states would not have afforded useful employment to more slaves than it contained, if that employment had been judiciously directed. In proportion as slave labor increases, when properly applied, both production and consumption increase also; so that we may venture to affirm, that slave labor will never superabound until our population shall become so great and our soil so fertile that every "rood of earth" will "maintain its man." This then, is the

proper employment of the slave. It is best adapted to his physical constitution, it best accords with his feelings and habits, and it affords the largest share of those comforts and indulgences, which are the proper reliefs of the necessary hardships of his condition. A commercial or manufacturing people never will be slave owners, because they never can profitably employ that kind of labor to any considerable extent. Wherever African slavery exists in a large class of the population, agriculture must of necessity be the chief occupation and the predominant interest.

Do I attach too much importance to this view of the subject? Let the history of free governments, throughout the world, answer the question. In no one of them can the causes of decay be traced to the agricultural class. In states where other occupations constituted the highest interest, and gave employment to the greatest number of the people, there are many melancholy examples of rapid departure from their original free principles, and of the exercise of the straightest despotism under those forms, upon which the people vainly relied for the security of public liberty. But the cultivator of the soil has no motive to make war upon his government, nor to overturn or pervert the institutions under which he lives. Too independent to be bought, too quiet to be urged into faction, and too happy in his condition to be desirous of change, he is neither ambitious himself, nor a fit instrument of the ambition of others. He is the best conservator of public liberty, because he owes to that liberty much more than any other man.

As public virtue is the basis upon which republican government rests, public intelligence and information are its best props and supports. I do not assert that there is any thing in domestic slavery calculated to increase the intelligence of the whites, nor do I consider that institution favorable to the general diffusion of knowledge. On the contrary, it is probable that the poorer classes of the people in slave-holding states, will in general be deficient in the elements of education. The whites who alone are educated, rarely amount to more than a bare majority of the entire population; and as their pursuit is agriculture, they are necessarily much dispersed in their positions. Hence the establishment of primary schools among them, is more difficult than in countries more thickly settled, and where every child is a proper subject for education. There may be something too, in the habits and pursuits of the slave owner, calculated to make him less patient of the labor of study, and less anxious for the acquisition of knowledge, than those to whom knowledge, in a certain degree, is a necessary means of subsistence. But this reasoning does not apply to that more extended and perfect education which fits men for public station, and prepares them for the higher duties of the citizen. Only a few such men arise in any age, and only a few are necessary for the wise ordering of public affairs and for the safety and prosperity of nations. To the formation of such characters domestic slavery is peculiarly favorable. It removes from the student the necessity of personal labor, and gives him time for study; it relieves him from the sordid and distracting cares which, under different systems, are so apt to chill his hopes and discourage his exertions. Hence the mind is less trammelled by forms, and is more inde-

pendent and free to exert its powers. The school room is not the only means, nor even the *best* means of education. He who is merely taught *jurare in verba magistri*, may enjoy the reputation of having passed through the schools, but he does not deserve the character of an educated man. Our northern youth pass their leisure hours, for the most part, either in schools or in listening to itinerant lecturers, who give them the mere surface of a thousand subjects without imparting to them any solid information upon any. While they are thus employed in making themselves masters of the ideas of others, the southern youth are freely thinking for themselves and forming ideas of their own. It is probably owing to this circumstance, that the citizens of our slave-holding states, to whatever quarter they remove, are apt to become prominent in politics, and to be distinguished for the freedom and liberality of their opinions. The same thing has been remarked of the slave-holding republics of antiquity. Chateaubriand, a high authority in matters of this sort, expresses himself thus: "But if I may be allowed to say what I think, in my opinion this system of slavery was one of the causes of the superiority of the great men of Athens and Rome, over those of modern times. It is certain that you cannot exercise all the faculties of the mind, except when you are relieved from the material cares of life; and you are not wholly relieved from these cares, but in countries where the arts, trades and domestic occupations are relinquished to slaves." The great man is not formed by books alone. He must have leisure to *think* as well as leisure to study; his mind must be free from the distractions and perplexities which attend the necessity of daily labor for daily bread; his feelings must be at ease, and his ideas unconfined, and free to range where they will. Such is the condition of the slave owner; and whether it make him more *learned* or not, it would be contrary to Nature, if it did not give him a more liberal caste of character, more elevated principles, a wider expansion of thought, a deeper and more fervent love, and a juster estimate of that liberty by which he is so highly distinguished.

There are only two causes of the decline and overthrow of free governments; they fall victims either to the power of a conqueror, or to the corruptions of their own people. *Usurpation*, in the ordinary acceptance of the term, has no agency in the matter. No one man can subdue the liberties of an entire people, without their consent. Neither Cæsar, Cromwell, nor Bonaparte, was an usurper. It is true that each of them became absolute in his own country, but this was only when the people had created for themselves the necessity for a master, and had voluntarily put the sceptre into his hands. The conqueror is the only real usurper. Free governments have often yielded to conquest, but not often until they have first yielded to corruptions at home. Indeed, they have generally been successful, not only in repelling invasion, but in adding the territories of conquered nations to their own. This, however, was only while they maintained the purity of their principles, for they began to be weak as soon as they began to be corrupt. Domestic slavery, if it adds nothing to their strength in war, takes nothing from their power of resistance. No country ever sends its entire population to the field. A portion must always be left at home, to cultivate the soil, to work in the

mechanic trades, to manage the exchanges of commerce, and to occupy themselves in all those pursuits which are necessary to provide subsistence, clothing, and all the *matériel* of war. In countries where slavery does not prevail, and where every man expects to provide for the comfort of himself and his family by his own exertions alone, few can be called to the field, without producing distress and want at home. But in countries where all these labors are performed by slaves, almost the entire free population may be employed in war, because one freeman may superintend and direct the labor of fifty slaves. It is probable, therefore, that a slave-holding state, will, in general, be able to call as many of her people to the field, as will a state having no slaves and only an equal population. So far as history instructs us upon the subject, those republics which have been most distinguished for their power, both in defensive and aggressive war, were, without exception, holders of slaves. Such nations too, are, as I have already remarked, necessarily agricultural. Their own soil generally yields them food, clothing, and whatever else is required to furnish forth an army and maintain it in the field. With them commerce and the arts are a secondary consideration, and of course they are independent of those foreign connexions upon which nations differently situated are compelled to rely. A people whose own soil supplies them with all the requisite means of defence, will rarely yield even to a superior power, so long as they shall continue to be animated with a due love of their independence and freedom. Such a people, whether they be owners of slaves or not, have much more to fear from themselves than from an invading enemy. The gold of Philip of Macedon, effected much more than his arms. A nation with even comparatively feeble resources, will generally be able to repel invasion so long as it is true to itself.

But it is not from the power of the conqueror that free nations have most to dread. Their own follies and vices are their worst enemy. Of these follies, the love of conquest is at once the most common and the most fatal. History is full of examples of republics which have owed their overthrow principally to this cause. Abuses, corruptions, oppressions, and the exercise of arbitrary power, necessarily follow in the path of war. And to a republic so engaged, success is as fatal as defeat. The last thing which she ought to desire, is an extended territory. Free government can scarcely be strong enough to be duly felt in the extremities of a vast dominion. Authority, like a circle in the water, becomes more and more indistinct and faint the farther it is extended. Government, weakened by its very greatness, becomes incapable of controlling its own agents. The reins of discipline are relaxed; licentiousness takes the place of liberty; disorders ensue; anarchy prevails, and at last, the despot is called in to protect the people against themselves. I think it is true, at least of military republics whose territories have been large, that the first indications of their decline have been seen in the provinces and distant governments.

Slave-holding republics are peculiarly secure from the dangers of this fatal folly. Aggressive war is contrary to the genius of agriculture. The husbandman does not readily abandon the ploughshare for the sword. Nothing short of a strong necessity, such as the defence of his country, or the vindication of his rights,

can drive him to arms. Satisfied with his own condition, he rarely desires to change it; conscious of the blessings which surround him, and properly appreciating them, he has no motive to invade the rights of others. He is too wise to put the peace, the security, the independence and the comfort of his fireside, upon the uncertain issues of war. Where the chief occupation of a country is agriculture, foreign war can present no adequate motive for withdrawing from the cultivation of the soil, either the labor itself or the skill which directs it. It rarely happens that such countries contain any large portion of that loose and idle population out of which alone a free government could hope to form an army of invasion. And to that better class who live in comparative comfort, home, however humble its enjoyments, possesses far more charms than the labor, the servitude, the dangers and the privations of the camp. The military adventurer is generally the creature of idleness, poverty, vice and misery; he is not often found amid the abundance and comfort of rural life.

Aggressive war is forbidden by the very nature of slave population. The slave requires the continual presence of the master, both to control and to protect him. Nor would it be at all times safe to withdraw from a slave-holding country any considerable portion of its military force. It is true, the history of our revolutionary war attests the general fidelity of our slaves in the presence of an invading enemy. Indeed, whatever their tempers may be, they are least formidable and most easily checked and controlled when the country is armed and its military power organized and in the field. A very small squadron of disciplined troops, prepared to march promptly and rapidly to any point of danger, would be sufficient to put down the best planned servile insurrection and to keep the slave population of a whole country in awe and subjection. An equal degree of security could not be reasonably expected in the absence of the military power of the country. Even if the opportunity should not be used for the purpose of open resistance and rebellion, such a condition of things could scarcely fail to relax discipline, to encourage disobedience, idleness and disorder, and thus to render the slave less valuable as a laborer. A slave-holding country, therefore, has the double motive of safety and of interest, not to desire foreign conquest and to abstain from aggressive war.

I am aware that history presents examples of slave-holding republics, who have not always acted upon these maxims; but the same examples are proofs that the maxims are sound, and that a departure from them is sure to be fatal to liberty. We should be unwise indeed, if we could not profit by the experience of other countries, so strongly enforcing the suggestions of our own interest and safety.

The great cause, however, of the overthrow of free governments, ever has been and ever will be the corruptions of their own people. An increase of wealth is the chief source of these corruptions. Wealth naturally leads to luxury, and luxury produces effeminacy, weakness and vice. The necessary restraints of true liberty are odious to the love of self-indulgence. A luxurious people are always corrupt and venal. The cutting reproach of Jugurtha was not applicable to Rome alone. Every luxurious nation is a venal nation,

and with such, even liberty itself has its price. From this deep sin of republics, slave-holding and agricultural nations are comparatively free. That equality of rank of which I have already spoken, presents few of the usual inducements to extravagance and ostentation; and, indeed, it is impossible for these to prevail to any considerable extent, except where wealth abounds. The moderate estates of an agricultural people do not admit of a high degree of luxury, and both their habits and their pursuits teach them to avoid it. Luxury makes its first lodgment in large cities. It is there chiefly and almost exclusively that redundant fortunes are found, and there alone are assembled, in irresistible numbers and force, all those seductive pleasures which cheat the imagination and betray the heart. From the cities these corruptions spread throughout the country, slowly it is true, but surely; and whenever they do so, public virtue is overcome, public spirit is broken and subdued, and public strength is paralyzed and destroyed. It is fortunate for an agricultural people that their habits and pursuits are unfavorable to the establishment of large cities. I do not speak of those cities of moderate size, which are necessary as marts for the produce of the country, and which that produce will always, under proper systems, invite into existence. From these, little danger to public morals is to be apprehended. I allude to those swollen capitals which engross the trade, absorb the wealth, and control the industry of nations. These are the peculiar abodes of luxury, the fruitful mothers of public and private vices, the nurseries of sedition, riot and disorder, and the worst enemies of rational, regulated liberty. It is rare that cities of this sort arise in slave-holding and agricultural countries. In them, the farm is the station of profit, usefulness, influence and dignity. The country does not look to the town for its examples, nor borrow from it either its morals or its manners. It may be received as an infallible indication of the decline of republican simplicity, that the city is looked to as the retreat of the wealthy. This never happens until the country is prepared to take on new manners and a new character.

It is the natural tendency of liberty to run into extremes. Communities that are free to govern themselves, are always prone to govern too much. Men seem to forget that they possess power, unless they are in the constant exercise of it. All that is evil in their condition, whatever disappoints their hopes or embarrasses their exertions or defeats their plans, is apt to be laid to the government and laws; and conscious that those laws are subject to their will, they are constantly devising new expedients for relief. The necessary consequence is, that they acquire the habit of depending too much upon the government and too little upon themselves. The great and rival interests of society are engaged in a constant struggle for the control of public legislation, as the surest means of advancing their own success. This rivalry would probably be favorable to liberty, if a proper balance could be preserved between the different interests. But it cannot be long preserved; it would be as reasonable to expect a continued equality in the strength of men. The strongest will acquire an ascendancy, and the weakest must yield to its power. This is a condition of things absolutely inconsistent with true liberty. The worst

of all despotisms is that which operates through the forms of free government. Its oppressions are in exact proportion to the strongest and worst of our passions; and there is no relief from them except in revolution, because the oppressor is irresponsible, and there is no power to which the oppressed can appeal. *The law* is the oppressor, and those who make the law have the highest interest to render its burthens as heavy and galling as can be borne. The chain which thus binds a large portion of a people who claim to be free, must either be kept together by open and undisguised force, or else it will, at some time or other, be broken by violence and revolution. It appears to me that this view of the subject has not generally been duly considered. Free government, which depends on the will of the people, cannot be more stable than that will itself. Of course, that condition of society is most favorable to liberty, in which the interests of the different orders are the most identical, their habits the most uniform, and their pursuits the most fixed and permanent. Such is the character of our slave-holding communities. We are all cultivators of the soil, and all owners of slaves. Whatever difference there may be in our occupations, there are few among us whose largest interest is not land and negroes. Thus the identity of our interests insures equality in the laws; the permanency of our interests insures stability in the laws, and the uniformity of our manners and occupations saves us from all those jealousies and discontents which lead to disorder and outrage. A population homogeneous in character, in interests and pursuits, is best suited to free institutions, because the laws necessarily operate alike on all; and all, having the same stake in the government, are alike interested to support it. Men do not abandon their liberties without some motive stronger than the love of liberty; and what stronger motive can there be with men, who find in liberty itself the best protection of all their rights; the best encouragement for their industry, and the best security for their happiness.

I have said that the nature of our institutions is calculated to insure stability in the laws. This is a much more important safeguard of free institutions than may be generally supposed. Instability in the laws leads to the insecurity of rights, and the insecurity of rights brings the laws into contempt. A mutable and unsettled code soon loses the respect of the people, and ceases to be a protection for any right, because it ceases to possess any power. A want of respect for the laws is one of the surest indications of the decline of liberty. I do not speak of those occasional outbreaks of popular fury, which set all law and all government at defiance. These are the mere results of temporary excitement, and are liable to occur among all people, whatever be their form of government. I speak of that disregard of the laws which is seen in the frequent impunity of crime, in the defiance of the public authorities, and in the bold assumption of juries to set the law aside, in favor of their prejudices, their passions, their interests or their caprices. These things always proceed from a depraved state of public morals, where the laws are not objectionable; but they also occur, even in the purest communities, where the laws are regarded as unjust and oppressive. It is a difficult thing to enforce an unpopular law among a free people.

Yet, from whatever cause they proceed, they indicate either great corruption in the people or a wide departure from the pure principles of justice and equality in the government. I know not what is better calculated to produce such a state of things than those fluctuations to which the laws are always subject from the alternate successes of rival and contending interests, and the consequent disgusts and resentments of the defeated party. Men do not feel that either their rights or their interests are secure, where the laws which profess to protect them are liable to perpetual changes, and to be moulded only to suit the particular interest which may happen for the time to be predominant. They soon cease to respect laws which are not founded in any general principle, and which may exist only for an hour; and the government itself, with all its institutions, naturally sinks into contempt and imbecility. It is therefore of the utmost importance that the laws should not only be just and equal, but that they should be as uniform and stable as the condition of the country will allow. To this stability, domestic slavery with its inseparable incidents, necessarily contributes in a high degree, because that institution is itself stable, permanent, and so engrossing, as to give character to all others. Our reasoning upon this subject is confirmed by examples. The northern states have much more frequently changed their constitutions of government than the southern. Virginia lived fifty-four years under the same constitution, and her people, during all that time, were remarkable for their attachment to their government, for their obedience to the laws, and for the contented, quiet and good order of their conduct. It is to be regretted that so wise an example was not more generally followed; and she herself has the greatest cause to regret, that she did not continue to present that example through all succeeding years, to this time.

The remarks which I have made, apply with peculiar force to the exercise of the taxing power. There is no subject upon which the public mind is more sensitive than it is upon this. All history proves (and the history of our own country, not less than that of others,) that unequal taxation is an unfailing source of popular discontent and resistance. A slave-holding community is much less liable to inequality in this respect than any other. As land and negroes constitute much the largest part of the property of the country, they must of course, bear much the largest share of the expenses of government; and as these are owned by all classes and almost by every individual, no one can complain that he is unequally taxed. This is not equally true, if it be true at all, of countries in which slavery does not exist. Society in such countries is necessarily divided into a great variety of classes, each having, or believing that it has, its peculiar interests; and among these classes there is a continual strife to throw the burthens of government from themselves upon others. The successful classes are too apt to push their advantage to an imprudent excess, and the unsuccessful classes are discontented and ready to regard their government as their enemy. This has, not unfrequently, been the cause of the overthrow of government. But revolutions thus commenced, rarely result in favor of liberty. Even if successful, the angry passions which cause them are inconsistent with those temperate counsels by which alone liberty can be established or main-

tained; and if unsuccessful, the attempt serves only to confirm the power which it could not overthrow.

But the great danger which liberty has to fear in the United States, is to be found in that agrarian spirit which strikes at all that is above it, and spares nothing that is good or great in the institutions of society. This deformed offspring of popular discontents and vices, has too often been at once the reproach and the bane of free governments. It does not, it is true, belong peculiarly to them, but it is in them only that it has scope for action. The love of distinction is natural to man, and whatever confers it is an object of desire and of envy. Here, in the United States, the distinctions of birth and family do not prevail; and public office, which is generally held only for short periods—which supposes the incumbent to be the servant and not the master of the people—which is attended with no trappings nor insignia, to attract the public gaze, and which is generally laden with duties and responsibilities very disproportioned to its compensations—confers but little honor and possesses but few attractions. Wealth alone, (except that commanding order of genius which elevates its possessor conspicuously above other men, and which very few possess,) can confer any substantial distinction in the United States; and hence wealth is the object of universal desire, and the end which all ambition proposes to itself. It has been often remarked that avarice is the strongest feature in the American character. It could not well be otherwise, for where wealth alone can give us any real advantage over others, it is natural that it should be sought as the greatest earthly good; and it is equally natural that he who possesses it should be viewed with envy, jealousy and ill-will. The wealthy *individual* may, by an inoffensive and useful life, escape this fate; but the wealthy, as a *class*, never can escape it. Hitherto we can scarcely be said to have had any such class in the United States. So infinite are the resources of our country, and so various our modes of industry, that abundance and independence have every where prevailed. Besides, our public lands have held out a continual invitation to all those who have found it difficult to prosper in the old states. In the fertile regions of the west, the poor become rich in a day, as thousands upon thousands of the needy and destitute are proving every year. This continual drain of the very poor, tends to preserve a comparative equality among those who remain; a circumstance to which the non-slaveholding states, who have redundant populations, owe much of the tranquillity they have enjoyed. But this state of things cannot exist forever. The time will come when this outlet will be closed, and when our people, greatly increased in numbers and confined within their ancient limits, will press inconveniently upon one another. Then, if not before, the distinction of rich and poor will be clearly established; it will be both seen and felt. The usual jealousies of the one class and the consequent fears of the other will then commence, and from that moment the rights of property will be in danger. Property, which is protected only by the law, is always at the mercy of those who make the law. It will probably be very long before an actual majority of very poor will be found in any one of our states; but it is not necessary that this should be the case, in order to call the agrarian principle into action. We

are too apt to compare our condition with that of the ranks who are *above*, instead of that of the ranks who are *below* us. Hence, where the differences in point of wealth between different classes are very great and striking, there are few who do not consider themselves poor, and who would not hope to be benefited by a general commingling of property. Besides, there are never wanting those among the more wealthy who are ready to inflame the discontents of the inferior classes, in order to make them the instruments of their ambition. The middle class are the true conservators of public liberty. They have neither cause for jealousy nor motive for discontent; they have every thing to lose and nothing to gain by change. Whilst Rome limited the landed possessions of one man to seven acres, she was free, virtuous and powerful; when she extended it to five hundred acres, she began to be luxurious and effeminate; and when even this restriction was disregarded, and the lands of the country were engrossed by the wealthy, that circumstance accelerated and rendered inevitable the ruin of the republic. In all attempts upon public liberty the highest and the lowest orders are natural allies. The one is urged on by ambition and the other by indigence and suffering. The middle class can affiliate with neither, for it is indifferent to the objects of the one and above the motives of the other. The extremes only unite, and the intermediate class who alone are true lovers of liberty, are sure to be crushed between them. But their union, although fatal to liberty, is not less certainly fatal to themselves. The wealthy demagogue who allures the indigent by the hope of plunder, is apt to be himself the first victim. It is much easier to excite the storm of popular passions, than either to allay or to direct it. I think it is no bold prediction to say, that if the time shall ever arrive—and it *will* arrive—when labor cannot find its proper reward in any of our states, and when a large portion of the people, suffering with want, cannot look to other regions for relief, the rights of property will no longer be respected. It is in vain to talk of the blessings of liberty to those who are galled with the servitude of their own necessities. You cannot persuade men to think that the law which allows them to starve is a holy thing. With the right of property, perishes every other right. The social condition rests only upon that, and when that is destroyed, the whole fabric falls into ruin.

It would be a dangerous self-delusion in us, to suppose that there is any thing in our forms of government, or in the character of our people, to exempt us from this common danger of all republics. It has its source in the human heart, and that is very much the same at all times, in all places, and in all conditions of the social state. If we would escape it, we must remove the causes which excite it to action; and this is effectually done by the institution of negro slavery.

I have already remarked upon the equality which prevails among the whites, in our slave-holding states, but I then spoke only of the equality of *rank*. It is the equality of *wealth* only, which belongs to the present inquiry. And this is important—I am tempted to say, important above all things—in a free government. "Crimes spring up only from the extremes of indigence and opulence. Overgrown estates destroy the spirit of patriotism in those who have every thing and those who

have nothing."* And here again I would be understood to speak not of individuals, but of classes. There is no form of regular government, which can preserve an equality of wealth among individuals, even for a day; and it would be absurd to say that domestic slavery can produce any such result. But it approaches that result much more nearly than any other civil institution, and it prevents, in a very great degree, if not entirely, that gross inequality among the different *classes* of society, from which alone liberty has any thing to fear. Indeed there is but one class in our slave-holding states. Merchants, mechanics, manufacturers, and all the various modes of industry, are found in all of them; but their numbers are comparatively small, and their influence, as *classes*, is scarcely felt. Besides, these are all slave-holders themselves, and land-owners also. The one great interest of all our communities is agriculture; an interest so predominant in extent, and embracing so large a portion of our people, as to be, to all practical purposes, the *sole* interest. The difference in the wealth even of individuals in such a state of society, is never very striking. The profits of agriculture are comparatively small, and its returns, although very certain, are also very slow. The most successful farmer becomes only moderately rich, by the labors of a whole life; the few exceptions which we see, serve only to prove the truth of the general rule. The fluctuations of value; the spirit of speculation; the daring enterprise which seeks to become suddenly rich by putting every thing to hazard; do not belong to agricultural life. That life demands industry, patience, economy, prudence; and it seldom fails to reward these qualities with independence and comfort, though it rarely rewards them with wealth.

There is then, in truth, nothing in the condition of our slave-holding states, upon which the jealousies of the different classes into which societies are usually divided, can act. We have among us, but one great class, and all who belong to it have a necessary sympathy with one another; we have but one great interest, and all who possess it are equally ready to maintain and protect it. Equal in our rank, the spirit of leveling sees nothing to envy; equal in our fortune, the spirit of agrarianism sees nothing to attack. All rights are safe and all interests are secure, because there are none who can assail, except those who possess them.

There is a natural jealousy between labor and capital; a jealousy which, in a particular condition of society, amounts to actual hostility. It is a strange hostility too, since labor lives only by the aid of capital, and capital yields no return without the assistance of labor. This mutual dependence is felt and acknowledged by both, so long as there is a due proportion between them. So long as there is labor enough to employ capital, and capital enough to give labor its due reward, they work together in perfect harmony. Even where capital superabounds, their harmony is not destroyed, for labor then soon becomes capital. This has been, and probably now is, the condition of the United States, but it is not the usual condition in any thickly peopled country, and probably will soon cease to be our condition. Whenever labor shall superabound, and when of course capital can no longer employ and re-

ward it, labor will become discontented, and the war upon capital will commence. Liberty cannot survive this contest; she must perish when the only right which gives her any value ceases to be respected. In slave-holding countries this contest cannot easily arise. In them, labor and capital unite in the same person. The laborer is the slave, and the capitalist is the owner of the slave. Capital has a direct interest to see that labor be not oppressed, and labor has nothing to hope from an attack on capital. So far from being hostile, they aid and support each other; so far from shaking the foundations of government by their strifes and contentions, they have a common interest to sustain it, and they necessarily work together for the establishment of good order and the maintainance of right. It is owing chiefly to this cause, that the condition of society at the south has always been more tranquil and less disturbed by factious outbreaks of the people, than it has been at the north.

When the Almighty decreed that man should eat bread by the sweat of his face, he laid the foundation of all the differences which we see in the orders of society. It is the necessary consequence of this decree, that one portion of mankind shall live upon the labors of another portion. Such is the case all over the world, and such it will continue to be, until the world shall either abandon its civilization or become one Eden, yielding all fruits spontaneously. It is then an object of first importance, that the regulations of society should be such as to render the lot of the laborer as free from discontent as possible. This is not to be done by any change in that lot itself. You may indeed benefit the *individual* in that way, but the *class* must still remain. The laborer of yesterday, who becomes the capitalist of to-day, does but make room for another laborer in his place. If the condition of society were such as to hold out the hope of this change to *every* laborer, it would indeed be the best means of reconciling him to his lot. But this cannot be, so long as it shall be the pleasure of God that man shall work for his subsistence. The free laborer always has his hopes, and it is the disappointment of those hopes which renders him discontented and factious. He sees before him the thousand roads of industry, perfectly open and free; he feels secure that he will be protected in the enjoyment of all that his industry may earn; and he knows that even the distinctions of high place and preferment are not interdicted to him. These reflections certainly encourage his exertions and often make him a wealthier and more valuable man. But they as often inspire him with unfounded hopes, and teach him to look above the realities of his condition; to struggle for some distant good which eludes his grasp, and leaves him a prey to disappointment and mortification. Seeing constantly before him a class in the enjoyment of that ease, comfort and distinction, for which he sighs and labors in vain, can it be expected that he will charge his humbler fate to his own demerit? This would require a degree of candor which is found in very few, for it belongs only to the best order of intellect and to the highest moral culture. Most men in such circumstances, would be apt to charge their misfortunes to errors in the systems around them; to the laws which recognize and maintain differences of condition among men, odious to them, because they feel them to be oppressive

* St. Pierre, *Studies of Nature*.

in their own persons. Not so with the slave. He is born to his condition; he grows up with the conviction that it is unchangeable; he submits to his destiny with resignation, because he has no hope that he can ever make it materially better. Even freedom is scarcely a blessing to him, for the eternal brand is upon his face—his caste is irrevocably fixed—and although he may cease to acknowledge a master, he can never cease to belong to the lowest class of mankind. It is the deep conviction of this truth which so often induces the slaves of kind masters to refuse freedom, when it is offered to them. Freedom is no boon to them, since it brings with it all the cares and difficulties of self-dependence, without any of the usual advantages of independence in thought and action. The African slave is contented from necessity. He has no motive to quarrel with a lot which he knows that he cannot change, and the burthens of which are best relieved by a cheerful discharge of the duties which attend them. The history of slavery in the United States, attests the truth of this reasoning. In no part of the world has the laboring class been more distinguished for contentment, cheerfulness, and even gaiety; and such the negro slave will always be, if he be not taught to feel or to imagine other evils than those which his condition itself imposes on him.

I am aware that this view of the subject is liable to the objection, that a system of society cannot be good, if it condemn the laboring class to unchangeable servitude, and cut them off from all hope of improving their condition. I am not called on to meet this objection here. Even granting it to be true, in the view of the *moralist*, it does not apply to slavery as a *political* institution, nor does it meet the argument by which that institution is shown to be favorable to public liberty. And it is well worthy the consideration even of the *moralist*, whether, as labor is necessary by an immutable law, he will add any thing to the happiness of those who are condemned to perform it, by imbuing them with feelings above their condition, by inspiring them with hopes which can never be realised, and by rendering them dissatisfied with a lot from which there is no escape. The curse which condemns us to labor, is tempered with infinite mercy; for whatever be our condition in life, our true happiness must be found in the proper employment of our faculties. To all those who think that they advance the cause of humanity by perpetual endeavors to disturb the order which Nature herself has established among men, I have no counsel to offer. If they cannot be made wise by the lessons of experience, taught in the history of all such attempts, they will scarcely profit by those of any other teacher.

There is a condition of society in which the wages of labor will purchase but an insufficient supply of food and clothing. Coercion then becomes necessary. But in a free government coercion must operate alike on all classes of the people, for any discrimination between them would be wholly inconsistent with equal rights. And yet coercion to the wealthier classes would be felt as gratuitous tyranny; and indeed every class, except the very lowest, would feel in the same way, and would be anxious to shake off a government which imposed upon them such an unnecessary and degrading burthen. In non-slaveholding states, therefore, liberty could not exist under such a condition of things. With

them coercive labor would require the exercise of a degree of power incompatible with freedom; and this power would, in its operation, necessarily produce, in a great majority of the people, a degree of discontent under which no popular government could stand. But even this evil is avoided by the institution of domestic slavery; for that coercive energy, dangerous to freedom, which under different systems must be lodged in the frame of government, is, in slave-holding states, found in the frame of society.

A still farther security to public liberty may be found in the character of that discipline by which our slave population is controlled. The slave is protected by the law, against all wanton abuses of his person, and is answerable in his person for whatever crimes he may commit. So far he is recognised as a responsible agent, and but little farther. In most other respects, his master is responsible for him. In slave-holding states, the laboring class are in effect parcelled out and assigned to the care of competent guardians. These guardians have a two-fold interest to take care of them and to manage them properly; they receive the profits of their labor, and are responsible for their misbehavior. No system can be imagined, better calculated to insure a well-managed and orderly laboring class. Indeed it is impossible that any disorder can prevail among them, calculated seriously to endanger or disturb the authority of government, since they are placed, by the law itself, under the immediate and personal supervision and control of a class by whom that law was made, and who have the strongest interest to maintain it. An enlightened friend* once remarked to me, that in slaveholding states agrarianism is divided against itself. There is great truth and force in this idea. Even if there could be found in those states a class interested to break down the established order of society, they will always be too weak in numbers and resources to accomplish any thing by their own efforts. The only class to whom they could look with any hope of assistance, is that class over whom they are usually placed as temporary masters, and by whom they are least trusted. The last man with whom the slave would unite, is his overseer. There is then, in this institution, something which courts and solicits good order; there is a principle in it which avoids confusion and repels faction; its necessary tendency is to distract the purposes and to bind the arm of the agrarian and the leveller.

In contemplating the future decline of liberty in the United States, it cannot escape us that there is a want of perfect analogy between our republics and those of every other age and country. Many of the causes of decline are indeed common to all, and we may learn many lessons of wisdom and caution from the fate of those which have preceded us. Different as they were from us in many important particulars, we may derive much information from the study of their institutions, their manners and their character. But liberty in the United States will probably not perish as it has perished in the republics of the old world. Our form of government has no example among theirs; it is peculiar in its structure, and we may well hope that it is much more solidly founded and better balanced. We have the advantage too of being withdrawn from the neighborhood of all strong powers, whose ambition might

*Judge Beverley Tucker of Williamsburg.

lead them to attack us, or whose influence and example might betray us into aggressive war. Something may be hoped also from our anglo-saxon blood, from our descent from a race of men to whom the love of liberty and the spirit of independence are natural. Yet all these securities are insufficient to insure the continuance of our institutions. Free government will have its period here, as it has had it elsewhere. The catastrophe will probably be much longer delayed, but it is not possible to escape it. Even now, the attentive observer may discern causes at work, which the true lover of his country cannot contemplate without uneasiness and alarm. To my mind it is clear, that in this country Liberty is destined to perish a suicide; she will owe her destruction to her own excesses alone. And perish when she may, I am much deceived if her last entrenchment, her latest abiding place, will not be found in the slave-holding states.

In the remarks which I have thus presented, I do not imagine that I have made any new discoveries in the philosophy of the subject, or imparted any new ideas to those who have made this institution their study. Slavery has prevailed in every age of the world. We find it in the earliest records of the Bible, and we may trace it through all the periods of authentic history, from that time to this. It has existed ever since wars were known, and will probably continue to exist, until wars shall cease. It is not a new institution which has sprung up in modern times, only to dishonor free principles in America; neither is it in this age, that the attention of the political philosopher has been for the first time called to it. It has, through countless ages, engaged the anxious study of the legislator, and has exerted an important influence upon the systems he has established. Its true character and tendencies as a political institution, were much better understood by Aristotle than by Wilberforce. On this subject, at least, the world is not more enlightened now than it was two thousand years ago. We, however, although we may profit by the lights of other ages, are not limited to their maxims. Slavery, even as it existed among them, was approved by the wisest of their philosophers, and maintained by the most practised of their statesmen. If they found it a safe and wise institution, how much more valuable is it as it exists among ourselves? All the reasoning by which they justified and sustained it, applies *a fortiori* to our condition. Their slaves were for the most part captives in war, and white men like themselves. There was no natural brand, by which the eye could at a glance distinguish them from their masters. They were indeed, often the superiors of their masters, both in civilization and in all the higher attributes of personal character. Nothing was more common among them, than for the slave to become the preceptor of his master's sons, in philosophy, in the arts and in polite letters. Slavery of this kind, could not possibly be maintained, except by the most firm, vigorous and watchful discipline. He who feels that a single chain only binds him to an inferior condition, and debars him from the higher distinctions and enjoyments of life, cannot reasonably be expected to wear that chain contentedly. For him, there is hope; bondage alone, represses his genius, palsies his energies, and cuts him off from all the rewards which genius and energy may earn. Hence, in the republics

of the old world, liberty had much to dread, from servile insurrections and rebellions. The slave could in general bring into the field, not only equal physical power, but equal intelligence, information and military skill with his master. To guard against this danger, it often became necessary that government should possess a degree of power formidable to liberty, and exert a discipline offensive to its principles. It may well be doubted whether slavery of this sort, be favorable to free institutions, or not; for, however it may be calculated to inspire a love of liberty in the master, it creates a necessity for powers in the government, which may easily be abused to the destruction of liberty. With us, however, no such danger exists. Society, public opinion, domestic discipline, exert with us all the power which they found it necessary to lodge in the government. Our safety is in the color of the slave; in an eternal, ineffaceable distinction of nature. With us, there is no magic in the word *manumitto*, which transmutes the slave into the free citizen. His caste is everlasting, and whether bond or free, he is the negro still. This he knows and feels continually. It gives him a habit of obedience and submission, not easy to be broken, and it teaches him not to put his own safety to hazard for objects which Nature herself has placed forever beyond his reach.

Let us then learn to view this institution only in the lights in which it exhibits itself to us. History, whilst it affords some analogies by which our judgments may be instructed, presents no example by which we can safely regulate our conduct. We stand alone and peculiar, among slave-holding republics. The institution, as it exists among us, has its distinguishing characteristics, which did not enter into the speculations of the philosophers and statesmen of former days. We have our own reasoning to enlighten us, our own experience to guide us. And until that experience shall falsify all our speculations, and until we shall cease to regard the preservation of free and equal government, as the greatest of human blessings, we should cherish this institution, not as a necessary evil which we cannot shake off, but as a great positive good, to be carefully protected and preserved.

FIRST LOVE.

Men may talk about the folly and falsity of first love: but who is there, married or single, who can cast from their hearts the remembrance of their early love? At all times—in the depths of black night, and in the golden noonday, sudden thoughts and associations call up the image of our first love, and immediately the whole heart is (as it were) poured out in a gush of soft and sweet feelings. We consider this as no breach of faith to the present object of our affections. Like that olden love, it seems a different sort of affection from our present one—a holy and purifying feeling rather than one deserving condemnation.

It appears to me that first love must necessarily be different from those following after it: for if it be not essentially distinct, yet the novelty of the feeling when felt for the first time would make it in some measure so.

Williamsburg, Sept. 21, 1839.

THE BALLAD OF

SANCHA OF CASTILE AND THE COUNT ALARCÓS.

Where Tagus rolls his golden sands
By famed Toledo's wall,
And in a deep and lone recess
Of king Alphonso's hall,

In solitary sadness sits,
A prey to grief and care,
Sancha, the monarch's only child,
The fairest of the fair.

For now she thought of days gone by,
When she was wont to smile,
What time she loved a far famed knight,
The pride of old Castile.

A brave and comely knight was he,
Count Alarcós his name—
And in Alphonso's court for him
Sighed many a noble dame.

In battle or in tournament,
At court or in the field,
To none this gallant cavalier
Was ever known to yield.

The count, too, loved the royal maid,
And sought her hand to gain,
And pressed his suit with many a sigh,
But sighed and sued in vain.

For she, the daughter of a king,
Was no less proud than fair,
And had refused to wed the count,
Unmindful of his care.

"Then fare thee well, thou cruel dame!
A long farewell to thee!
The spell is broke—I love no more—
At length my heart is free.

"In foreign climes, and far away,
I yet may hope to find—
Though not, indeed, a face so fair—
Less pride and hearts more kind."

This said the count, and straight away
He mounts his coal black steed,
And to the court of Aragon
He wends his way with speed.

There soon he won, for deeds in arms,
Fresh laurels and renown,
And blooming wreaths of glory now
His knightly temples crown.

A year had passed—'twas early morn,
And on Toledo's wall
Paced to and fro the sentinel,
And watched the seneschal.

When lo! beyond the city gate,
Slow moving o'er the plain,
Was seen of knights in mourning weeds,
A melancholy train.

And now a page, approaching, sounds
A bugle loud and clear;
The drawbridge falls, the opening gate
Admits a funeral bier.

Meanwhile the heavy tramp of steeds
And muffled trumpet's bray
Caught Sancha's ear in her retreat,
And filled her with dismay.

"Now go, my trusty page," she said,
"And learn what this may be,
For to my heart these sounds forbode
Some deep calamity."

Forth went the page, but soon returned,
His face was deadly pale;
His faltering tongue essayed in vain
To tell the woful tale.

At length he said, "Oh, mistress dear,
To tell such news I dread;
Low lies the flower of chivalry,
Count Alarcós is dead!"

"In distant climes that fearless heart
Was struck by Moorish spear,
And now beneath thy balcony
They bear him in his bier."

The princess heard, and stood aghast—
Her cheek turned white as snow;
And so intense her grief, she looked
A monument of woe.

Then rushed into the street, and stopped
The funeral on its way;
The mourners halt, and at her feet
Th' uncovered coffin lay.

Kneeling beside the lifeless corpse,
She grieved in piteous strain—
But never spoke—she could not weep—
Her heart was rent in twain!

At length she said, and clasped her hands
In bitter agony:
"Oh God! oh God! that I should live
So sad a sight to see!"

"That evil day, that evil hour,
In sorrow now I rue,
When I the proffered love disdained
Of one so brave and true."

Seizing the dead count's icy hand,
She pressed it to her breast,
And on his forehead, pale and cold,
One pious kiss impressed.

Grasped in his fingers, held the count,
A lock of Sancha's hair;
This Sancha saw, and, seeing, looked
The picture of despair.

A mist came o'er her beauteous eyes,
Life's stream has ceased to glide,
And now she totters, reels, and falls
By her dead lover's side.

Pages and knights in haste repair
The princess to restore,
But all in vain—her spirit's fled,
Poor Sancha's now no more!

Next day they laid, with princely pomp,
Both in the self same grave—
Sancha, the fairest of the fair,
With Alarcós the brave.

G. W. M.

September, 1839.

REJOINDER TO A

"REPLY TO THE TUCKAHOE COLONY OF VIRGINIA."

"A man must serve his time to every trade
Save censure; critics all are ready made."

Byron.

An article under the cabalistic title of "The Tuckahoe Colony of Virginia" appeared in the *Messenger* of April, 1837; and now, after so long an interval, while it was quietly dropping down the stream of time into the ocean of oblivion, it has all of a sudden been snapped at, by the tooth of one of those voracious, critical, privateering pikes, who are ever skimming the surface of literature in quest of small game. The writer of the obnoxious article, begs leave in respect to certain of the errors charged, to put himself upon the confessional, and in respect to the rest, to offer such apology as the case may seem to demand. 'The reply' consists of some nine points, (counts of the indictment,) which will be adverted to, one by one, according to the order in which they stand.

"THE TUCKAHOE COLONY OF VIRGINIA.—My attention has been called to a publication in your *Messenger*, for the month of April, 1837, under the above title, which contains so many historical inaccuracies, as to induce me to correct them."

Answer:—It is an observation of Dean Swift, that "a man has no reason to be ashamed of confessing himself in the wrong, as it is only admitting that he is wiser to-day than he was yesterday." Yet while the writer of the erroneous article in question cannot fail to appreciate the obligations he is under, for corrections of so important a nature, made by so competent a hand, yet his gratitude is not unmingled with a certain degree of regret, that these corrections should have been postponed to so late a day as the present, which is *two years and four months* since the promulgation of the errors complained of. It is true, however, that a considerable period of time may be necessary to complete a work, where the object is by a series of cerebral percolations to reduce it to a state of crystalline, staccato perfection.

"Where the writer of the article referred to, obtained his account of the above named colony, I am at a loss to know. Smith, in his second voyage up the Chesapeake, found a tribe of Indians called Tockwogh, on the river Tockwogh."

The writer of the article referred to, is quite as much in the dark, as to the existence of this enigmatical 'Tuckahoe Colony of Virginia,' as the critic, and having never elsewhere heard of any such Colony, he is persuaded it is a *terra incognita*, a mere chimera, as

fabulous as Gulliver's Island of Laputa, or Sancho Panza's Island of Barataria. To explain—The words 'The Tuckahoe' in the original manuscript, were intended to be the generic heading of sundry small pieces, the first of which happened to be styled 'Colony of Virginia,' which was of course meant to be printed underneath and distinct from the words 'The Tuckahoe.'

"It is stated in the above article, that in 1605, 'Capt. Smith came over, and remained three years.' Now Smith, page 150, states that 'on the 19th of December, 1606, we set sail from Black Wall, with the first supply in Virginia.'"

Answer:—Admitted.

"Under the head Huguenots, it is stated that they settled in South Carolina in 1502. Now the term Huguenot had its origin in 1560. See Rees' Encyclopedia 9th vol."

Answer:—Admitted.

"It is also stated by Rees, (article Carolina,) that no permanent settlement seems to have been made in Carolina, until after the restoration of Charles II, who, by his first charter, dated 24th of March, 1662-1663, granted to Edward, Earl of Clarendon, and seven others, all the lands lying between the 31st and 36th degrees of north latitude, and extending westerly to the South Seas."

The critic has evidently fallen into a misunderstanding of the passage in 'The Tuckahoe Colony' here referred to. For his adducing authorities to show that no permanent settlement was made in Carolina until after the restoration of Charles II, would seem to imply that it had been asserted in the text that the Huguenot settlement mentioned *was* a permanent settlement, but that no such assertion was therein made, but expressly the contrary, will sufficiently appear from a quotation of the passage itself, which is as follows:

"In 1502 a settlement was effected in South Carolina by some French Protestants called Huguenots. They fled from France to escape persecution. This was the first attempt to colonize North America; it was undertaken for the sake of freedom of conscience, and like many similar enterprizes, failed. These refugees, worn out by sufferings, and distracted by dissensions, at their own request were *taken back to Europe in an English ship.*"

That there was such a Huguenot settlement in 1562, see Keith's *History of Virginia*, p. 29, and Marshall's *Life of Washington*, vol. 1, p. 186. The mistake of 1502, for 1562, though important, it is conceived might occur in a work in general accurate, but it is so long a time since those scraps of history were compiled, that it is impossible to recollect from what book the date was copied or miscopied.

"Under the head, Newfoundland, it is stated that that place was discovered by Sir Humphrey Gilbert in 1583. Now Marshall, in his *American Colonies*, (page 13,) states, that in May, 1496, John Cabot, sailed from Bristol, and discovered the islands of Newfoundland and St. John's."

Answer:—The critic has here again fallen into a misconception of the passage he is criticising, which is undoubtedly owing to the obscure manner in which an unpractised writer has expressed himself. The text does not state that Sir Humphrey Gilbert *discovered* Newfoundland, but simply that he *landed there*, which it is submitted is a very different thing. *Exempli gratia*, if a writer should assert that Napoleon Bonaparte *landed at St. Helena on a certain day of a certain year*,

it could not (strictly speaking) be inferred that he meant to say Bonaparte discovered that island at that particular time. The passage in the text stands thus:

"1583. Sir Humphrey Gilbert, brother-in-law to Sir Walter Raleigh, with five ships, set sail for America. He landed at Newfoundland, and claimed it for the British crown. On his return voyage, Sir Humphrey was deplorably lost in a storm at sea."

That Sir Humphrey Gilbert landed there in 1583, see Stith's History of Virginia, book 1, p. 6 and 7, and Burk's History of Virginia, vol. 1, p. 39. In regard to the discovery of Newfoundland, by John Cabot, in May, 1496, Marshall in his life of Washington, vol. 1, p. 4, dates this discovery by John Cabot and his son Sebastian, in May, 1498; which is mentioned merely to show that there exists a certain perplexity among the best writers, as to the dates of these early and obscure events. Indeed, to say the truth, some historians seem to doubt whether Cabot discovered Newfoundland at all or not. (See Bancroft's History of United States, vol. 1, and Burk, vol. 1, p. 39, in note.) However that may be, it is certain (although no such statement was made or intimated in the 'Tuckahoe Colony') that Sir Humphrey Gilbert on landing there, claimed Newfoundland in the name of Queen Elizabeth, and this with considerable parade and ceremony, for which see Stith, book 1, p. 6, and Marshall's Life of Washington, vol. 1, p. 11.

"UTTAMUSSACK.—The author locates this place twelve miles above Richmond, near the James River. Now, Smith, (page 138,) locates it at Pamaunkee; and at page 117, says that fourteen miles northward from the river Powhatan is the river Pamaunkee. Smith says, that near Uttamussack is a temple or place of Powhatan's. I think that this temple was Orapakes. On his map you will find it near the head of Chickahominy, not far from Pamaunkee, in the direction of Cold Harbour, in Hanover."

Answer:—This fact was gathered from the following passages in Beverley's History of Virginia, pp. 108, 109.

"The golden mine, of which there was once so much noise, may, perhaps, be found hereafter, to be some gold metal," &c. * * * * * This I take to be the place in Purchase's fourth book of his Pilgrim, called Uttamussack, where was formerly the principal temple of the country, and the metropolitan seat of the priests in Powhatan's time, &c. * * * * * There also was their great *Pawcorance* or Altar-Stone, which the Indians tell us was a solid crystal of between three and four foot cube, upon which in their greater solemnities they used to sacrifice. This they would make us believe was so clear, that the grain of a man's skin might be seen through it, and was so heavy too, that when they removed their gods and kings, not being able to carry it away, they buried it thereabouts. But the place has never yet been discovered.

"Mr. Alexander Whitaker, Minister of Henrico, on James River, in the company's time, writing to them, says thus: *Twelve miles from the Falls, there is a Crystal Rock, wherewith the Indians do head many of their arrows.*"

From the location of this 'Crystal Rock,' twelve miles from the Falls, and the circumstance that there was a 'Crystal' of that description at Uttamussack, (it being reckoned there were hardly two of that sort,) it was probably inferred that Uttamussack was twelve miles from the Falls. The hypothesis of the critic

that Uttamussack was at Orapakes, however ingenious in itself, is accompanied by several difficulties; for a temple at Pamaunkee could hardly with propriety be said to be near the head of Chickahominy, which by Smith's map is some ten miles distant. Nor is the critic's conjecture that 'this temple was Orapakes,' without difficulties of a truly embarrassing nature, for Captain Smith calls it a town, and a town can hardly be properly termed a temple. "And in a triumphant manner, led him [Smith] to Orapakes, where he was after their manner kindly feasted and well used. * * * * * But arriving at the Town [i. e. Orapakes,] (which was but onely thirtie or fortie houses made of mats, which they remove as they please as we our tents,) all the women and children staring to behold him," &c. Smith's History of Virginia, p. 143, and Stith, book 2, p. 51. It is rather a matter of surprise, that this critic, who is imbued with so refined a spirit of accuracy, (*homo usque ad unguem*) and who is apparently so very familiar with Smith's map, should not have perceived that Uttamussack is set down on that map, at Pamaunkee, which would have at once relieved him from all further solicitude about the matter, and from the necessity of locating it at Orapakes, which is apparently some thirty miles distant, and which the itinerant antiquary might be somewhat puzzled to find from the topographical data of the critic, inasmuch as the direction of Cold Harbor, (unless it differs from all other harbors in the world, whether cold or hot, or like the Laodiceans neither,) will vary considerably, according to the point of departure, from which you start for it. But '*de minimis non curat lex.*'

'I leave topography to classic Gell.'

It may, however, not be amiss here to suggest, that by the phrase 'at Pamaunkee,' Smith, perhaps, did not mean at a river of that name (for at a river is rather an odd expression) but at a place so called, which idea is confirmed by the word Pamaunkee on Smith's map, being printed not parallel to the line of the river, but perpendicular thereto, as is the case with other places along the river. This river was then called the Yough-tanund, and the name Pamaunkee was applied to the York. See Smith, p. 117, and 142. Stith, book 2, page 53.

"COLONIES.—Under this head the author states, that 'James Town sent out two colonies.' One he locates six miles below Richmond. Now according to Smith, (page 236,) West's colony was seated 'by the Falls,' "in a place not only subject to the river's inundation, but round environed with many intolerable inconveniences."

Answer: "Anno 1609. This year Jamestown sent out people and made two other settlements, one at Nansemond on James River, and the other at Powhatan six miles below the Falls of James River, (which last was bought of Powhatan for a certain quantity of copper,) each settlement consisting of about a hundred and twenty men. Some small time after another was made at Kiquotan, by the mouth of James River." Beverley, page 19.

"The author locates Kiquotan, near Norfolk; whereas, reference to Smith's map will show that Kiquotan includes Hampton and Old Point."

With due deference, it is submitted whether it be not consistent with common usage, in this case, to say

Kiquotan [Hampton] is near Norfolk, the object of the writer being simply to give the distant reader some general idea of the position of that place, by referring it to the nearest town of consequence in that part of the country; as we say in common parlance, Cambridge near Boston, or Germantown near Philadelphia; *Qui haret in litera, haret in cortice*. It was unnecessary to descend into these hypercritical minutiae since there are some errors (at least two) of much more importance, which the critic has allowed to pass with impunity.

'Dat veniam corvis, vexat censura columbas.'

Juvenal, Sat. 2, v. 63.

"The author says that Williamsburg was laid off in the form of a W. It was not. Governor Nicholson proposed it; but it was not done."

Answer:—"Here [at Middle Plantation] Governor Nicholson projected a large town, and laid out the street in the form of a W, calling the same Williamsburgh, in honor of the reigning king." Keith's History of Virginia, page 171. It is proper to mention that this part of 'The Tuckahoe Colony' consists merely of some notes of a three or four days excursion in the lower country. Such fugitive productions, as they do not pretend to the accuracy of history, ought to be received with such indulgence as is expressed in the verse,

'Be to their virtues very kind.
Be to their faults a little blind.'

"Secretary Nelson's house in York Town was demolished by the artillery of the combined armies; and not Governor Nelson's, as the author states. The latter is still in good preservation."

Answer:—"The Virginia Militia, at the siege of York Town, were commanded by General Nelson, at that time governor of the State. The following anecdotes were related to me by General Lafayette.

"When the cannon were prepared for bombarding the town, Governor Nelson was requested to direct the pointing of them to those parts where they would do the greatest execution. He showed to officers a large house, which was a conspicuous object, and which he said was probably the head-quarters. He advised them to aim at that house. It proved to be his own. This evidence of patriotism was regarded with high admiration by the French officers." Spark's writings of Washington, vol. 8, page 201, in note. This passage is quoted not so much to deny the justice of the correction of the critic, as to show that the error has prevailed somewhat extensively.

"The author, in his rude remarks on the country gentlemen who 'have eaten up their estates; their property has gone down their gullets;' was unmindful of the old adage, 'nil nisi,' &c., and must have forgotten that his maternal ancestors were included in his philippic. Chelsea, in the olden time, was a very hospitable mansion; and may have been 'more generous than just.' But I cannot agree with the author, that they were among those of whom he says, 'fools make feasts, and wise men come to eat them.'"

Answer:—"The writer of the article in question had (probably owing to his ignorance on that head,) always conceived that the maxim, *De mortuis nil nisi bonum*, was intended to exclude animadversions on deceased individuals, and not those which are of a general nature, applicable to an age or class of mankind, in respect to

which writers have ever been accustomed to use a considerable latitude of remark. Thus Juvenal has

"Nam de tot pulchris, et latæ orbibus, et tam
Antiquis, unâ comedunt patrimonium mensæ."

Goldsmith in his 'Deserted Village,' has inveighed with a good deal of warmth and severity against the depopulating evils of luxury; and in his preface, alluding to this feature of his poem, he somewhat oddly remarks, "merely for the sake of novelty and variety, one would wish to be sometimes in the right."

The homely proverb, which "coming between the wind and his nobility," seems to have offended the perhaps too sensitive nostrils of the critic, it must be admitted, is somewhat coarse and vulgar; but it may be, that like some other coarse and vulgar maxims, under an uncouth garb, it contains a salutary and important truth.* Perhaps "the shoe pinches," and "*hinc illæ lachrymæ*." Whether there was ground for the remark, (in reference to a former age,) in that portion of the state, may be safely left with the country gentlemen of the present day to determine. They have continually before them, the melancholy forms of decayed churches, dismantled seats, impoverished fields, the disinherited with tears bidding a final farewell to the play-ground of childhood, the ancestral hearth, and patrimonial oak, endeared to them by every tender consideration, and ancient families scattered, like autumnal leaves, before the winds of Heaven.

What were the particular habits, manners and customs of the ancestors, of an anonymous writer, (and so erroneous and rude a one,) or whether such a person ever had any ancestors, are matters rather of curious conjecture (something like the critic's, that the temple was Orapakes,) than of any practical importance.

If there ever were such people, and if they were now living, it is likely they would not care "three skips of a flea," either for the supposed aspersion of their descendant, or for the superfluous generosity of this uncalled for vindication.

"He'd undertake to prove by force
Of argument, a man's no horse."

During the trial of Aaron Burr, Luther Martin said of one of the prosecuting counsel, that "he was continually hopping up like a parched pea;" on quitting the capitol, the gentleman of whom Mr. Martin had thus spoken, was complaining of the remark to Mr. Jack Baker, (who was also engaged in the cause,) in a manner rather lugubrious and prolonged for the occasion, when Mr. B., who had not much taste for the pathetic, interrupted him, exclaiming—"Have done my dear sir, I am perfectly convinced." "Convinced! convinced of what?" cried the other. "Convinced (said Baker,) that you are not a parched pea."

If a writer passing through the lower country where his ancestors lived, should remark that "mill ponds had destroyed many lives," it could hardly be fairly inferred from that that he meant to say that there was a mill-pond on every plantation in the country, or that there was a mill-pond at the seat of his great grandfather. While the critic reproaches the writer of the obnoxious article with "rudeness" and "false statements," that writer so far from recriminating any thing of the sort, is only at a loss to know, how the critic could preserve

* Sæpe sub aurâ latet sapientia vestæ.

so much equanimity in the midst of so much that was calculated to try the patience of a person so profoundly learned in the history of Virginia, and who studies accuracy with such fastidious scrupulosity. Although his sole object was (as he mentions) to correct the errors of another, he has undoubtedly effected something more, for he has succeeded in committing several himself. In regard to the matter of "rudeness," the critic's precept was wholly unnecessary, as his example alone could not fail to prove amply satisfactory in that particular.

CHARLES CAMPBELL.

Petersburg, Va., Aug. 20, 1839.

SKETCH OF FERDINAND,

THE LATE KING OF SPAIN.

Ferdinand VII, king of Spain, and the sixth prince of the Bourbon dynasty in that kingdom, was born at the Escorial, in October 1784. He was recognised as prince of Asturias, or heir to the crown, in 1789, by the Cortes which had been assembled in that year for the purpose. He was married in the first instance to Marie Antoinette de Bourbon, daughter of Ferdinand IV, king of Naples; and this marriage took place at Barcelona, in October 1802. It appears that the youth and personal merit of this princess inspired him with a sincere attachment, and that he was deeply affected by her death, which happened in May 1806.

His second wife was Isabel Maria de Braganza, daughter of John VI of Portugal, to whom he was united in September 1816. This princess shared the throne of Ferdinand for a still shorter period than the preceding one: she died in child-birth, in 1818. Her personal appearance was good; her features regular, and might even have been styled handsome. But there was a vacant look, and a want of expression in her countenance, that deprived her of all pretensions to beauty. She had a taste for the fine arts, and patronized the professors of them, especially the celebrated painter Lopez, under whose directions she herself attained no inconsiderable skill in painting and design.

The torch of Hymen was lit once more in 1819, and Ferdinand was espoused to Maria Josepha Amelia, daughter of the duke Maximilian, brother of the king of Saxony. In respect of education and acquirements, she was perhaps the most accomplished queen that ever sat on the throne of Spain. She spoke several languages, was acquainted with the latin, and had a taste for poetry. Of the latter, she gave the public one or two specimens in Spanish, which, considering that she wrote in a foreign language, did no little credit to her talents. With such accomplishments, this princess might have been the admiration of her subjects; but, unhappily, there was in her disposition a melancholy and moroseness, which, added to a severe and forbidding countenance, imposed an undue restraint on all who approached her, and cast a gloom on every thing around. Josepha Amelia was an ascetic, austere in her morals, and devoted to religion and religious practices. She was by nature better fitted for a convent than a court; but she was charitable and humane, and died regretted by the poor, at Aranjuez, in May 1829.

The throne of Ferdinand was still without a direct heir, and the king was induced to enter the conjugal state for the fourth time. The fatality which seemed to attend a union with Ferdinand, and the example of three princesses who had sunk into the grave soon after ascending the Spanish throne, did not deter Maria Christina de Bourbon, daughter of Francesco Genaro, king of Naples, from accepting that honor, and before the expiration of 1829, she became the wife of Ferdinand and queen of Spain.

The reputation of this princess had spread through the kingdom long before her arrival, and on her appearance in the capital, her youth, beauty and affability, realized the most sanguine expectations, and filled all with rapture and enthusiasm. She studied from the first to make herself popular, and succeeded; she flattered the prejudices of the people, conformed to their usages, and adopted their dress. All this, aided by an expressive countenance, and an indescribable smile always playing about her lips, soon caught the hearts of the people, to whom she was fond of showing herself, and who admired her the more from the contrast of her manner compared with that of her predecessor.

With the exception that Providence refused him a son, Ferdinand, who in the great political drama lately represented in Europe, acted no inconsiderable part, succeeded in attaining nearly all the objects of his wishes. During a long and turbulent reign, chequered by a variety of events, the fortune of this prince constantly prevailed, and bore him in safety over the rocks and quicksands which threatened his political career, if not his personal existence. Other men with more firmness of character, or with talents superior to those which Ferdinand was believed to possess, would, if placed in the same circumstances, have fallen perhaps the victims of their opinions, or sunk under the weight of their misfortunes. But Ferdinand, yielding always to the blast, or suffering himself to be carried away by the stream, saw many a storm pass harmless over his head, and avoided, by a patient resignation, all the evils of resistance when unsuccessful. Without attempting to control the course of events, he seems invariably to have placed his destiny in the hands of Providence. Called to the throne in 1808, by the abdication of his father and the voice of the people, he assumed the supreme authority, and found himself at the head of a loyal and devoted people. A few months only elapsed, when being summoned to Bayonne, and apprised of his father's protest against the abdication, he relinquished his rights, yielded up the crown, and surrendered himself a prisoner at Valençey. On his restoration in 1813, the unfortunate constitution of 1812 was alternately sanctioned and abolished, supported and abandoned by him, according to the circumstances and spirit of the times, and in proportion to the prevalence of the parties in favor of or against it, and still he remained the sovereign of the country. When in 1830 the succession to the crown became a matter of serious consideration, he yielded to the solicitations of the queen, and declared his eldest daughter, the young princess Maria Isabel, lawful heiress to the crown, and this same declaration was in the space of a few weeks cancelled and renewed without difficulty, and without any of the consequences which such an act was calculated to produce. Neither the designs of a corrupt court, threatening his

very existence, while yet a youth, nor the daggers which surrounded him in Seville, nor the bomb-shells that fell around him while in Cadiz, were able to reach a life which seemed to be guarded by a charm.

Ferdinand, at the time of his death, was about forty-nine years of age. He was rather above the middle stature, and corpulent. His complexion sallow, his hair of a dark brown and scanty, and his features strongly marked and not the most becoming; the projecting under-jaw of the Bourbons being in him more remarkable than in any of the family. There was, however, one agreeable feature in his countenance—a mild expressive eye, indicating a benevolence of character, which, by many, will scarcely be accorded to him. He is believed to have been a man of good natural talents, but credulous and irresolute, and too susceptible of impressions.

Don Carlos, the late king's brother, is now about fifty years of age. His resemblance to the deceased Ferdinand is but slight, except that he too is distinguished by the characteristic feature of the Bourbons. In regard to his character and disposition, such is the variety of opinions, that it would be difficult to fix upon a criterion. By those who were attached to his household, and knew him best, he has been represented as a good father, a good husband, and a kind master. In his manner he is grave and dignified; he is particular on points of etiquette, jealous of his rank, and tenacious of his privileges. He was ever remarkable for the deference he paid to the clergy, and for his adherence to old practices and old opinions; and it was the dread, so fully verified in the sequel, of his entering too fully into the views of the priests and ultra-royalists, on coming into power, that deterred many a powerful friend from joining him when he asserted his claim to the crown and gave the signal for the revolution that is now consuming the vitals of the nation.

The right of Don Carlos and of the young Maria Isabel respectively to the crown of Spain, has been too often and too ably discussed to require any notice here. The former, doubtless, was excluded by an *ex post facto* law in favor of the latter. This sacrifice of justice (if it was one,) may perhaps be defended on the principle of permitting a little evil for the sake of a great good; since it cannot be denied, that the welfare and improvement of the country, and the success of the liberal institutions lately introduced there, can only be hoped for under the more enlightened sway of the youthful Isabel.

What the result may be of the struggle going on in Spain, which is, in fact, a war of succession, it would be difficult to conjecture. The strength of the two parties is almost equally divided; the one possessing the physical, the other the moral power of the kingdom; the queen having the resources and revenues of the country, the prince maintaining a decided ascendant over the hearts and minds of the great mass of the people; Isabel reigning in the capital and in the cities, Carlos lording it in the villages and in the mountains.

G. W. M.

AFFLICTION.

Affliction is, to the good, as a storm to the atmosphere—they both purify that which before was almost purity.

SONNETS;

To "J. D." author of *Spring, Summer, Autumn and Winter Sonnets*.

I.

Bard of the pleasant lyre! where'er thy strain
Breaks on the stiffness of the stifening air—
Whether in Spring-time, o'er the grassy plain,
With careless step you rove, 'mid flowrets fair—
Whether through Summer's fervid walks you stray,
And mark the waters and the winds at play—
Whether 'mid Autumn's stores of ripening gold,
Thou rovest, pensive, 'mid the dying flowers—
Or Winter calls thee, with his voices cold,
To muse, instructed, 'mong the leafless bowers—
My heart is with thee: Through the joyous hours
I roam, with thee, through scenes so proudly told!
By brook, by glen, on mountain-top I stand,
Turns my fond soul to thee, and my loved Father-land!

II.

Dixon! our own New-England land is fair,
And happy faces glad its pleasant vales:
And voices whisper on its haunted air;
Where olden memories breathe their hallowed tales!
But come, my friend, and rove awhile with me,
And Southern scenes shall spread a feast for thee:
The bard is Nature's priest: where'er she reigns,
There may he find an altar: and his soul
May offer up its incense! Seek the plains,
Where the bright South doth woo with sweet control:
Here noble hearts will cheer us: while the strains
Of warbling birds, more sweet than notes which stole
From Orpheus' lyre, shall win us, for a time,
To linger from our own, to bless the Southern clime!

C. W. EVEREST.

North Carolina, Aug. 22, 1839.

THE REVEL.

"Fill, brothers, fill! heed not the storm,
Tho' Heav'n to Earth were sinking!
Drink, brothers, drink! the thirsty earth
The streaming show'r is drinking."

"No! we heed not the storm, at the lightning we laugh,
While the life-giving liquid we merrily quaff."

The glasses are fill'd, and are sparkling on high;
But the wine is untasted:—A bolt from the sky,
As if borne on the wings of a warning from Heaven,
With a shivering crash, ev'ry goblet has riven.
Hush'd then were the guests, but their silence was brief,
When the hall rang again with the voice of the chief.

"Bring cups, fresh cups! we'll fill again:
No coward banquets here;

Tho' Death's bright arrows round us gleam,
Wine, wine shall drown our fear."

"Then a fig for the storm; at the lightning we laugh,
While a health to the tempest we merrily quaff."

The glasses again sparkle foaming and bright;
They are raised to the lips! Mark that quick, flashing
light!

Why drops ev'ry goblet? Why quivers each form?
Is their mirth aw'd at last by the rage of the storm?
Ay—the peal that re-echoed, burst over the head
Of a ghastly and motionless Feast of the Dead!

TYRO.

HOPE.

I've never known an hour of joy,
 Since manhood dawn'd upon my brow :
 My life is love, and yet alloy
 Has blasted every hope till now.

And what is hope?—a bubble bright,
 That floats upon the treacherous stream ;
 A flash, a wild illusive light,
 That lumines some gay mid-day dream.

It is a phantom of the mind,
 That but beguiles us to betray ;
 Then spreads upon the wanton wind,
 Its glittering wings, and flits away.

It is a butterfly—that flies,
 Ere we its beauties have surveyed—
 A summer cloud, that gilds the skies,
 Yet dies as soon as it was made.

MILFORD BARD.

N. P. WILLIS.

Literary readers are, for the most part, apprised, that the gentleman whose name heads this article, (who, as a writer of both prose and poetry, has acquired no inconsiderable distinction,) has recently united with Dr. Porter in the establishment of a new periodical in the city of New York, with the title of the "*Corsair*." As was to be expected in that great emporium of fashion and novelty as well as of commerce, this paper, aided by the reputation of its editors, has suddenly sprung into the full maturity of patronage, and promises to hold a high rank in the well contested field of competition. In order, we presume, to render its pages more attractive, Mr. Willis embarked early in the summer for England, on a voyage of literary *picaresque*; and since his arrival there, has regularly supplied the "*Corsair*" with contributions under the somewhat untasteful title of "Jottings down in London." These consist, for the most part, of scraps and gleanings, picked up by the writer from his old familiar haunts in the English metropolis, and are, many of them, strikingly descriptive of the manners, fashions, and follies of that "Great Babel." We have read them as far as No. IV; and whilst it is admitted they contain much of the force, piquancy, and originality which distinguish the author's prose compositions, they are by no means free from the affectation, puerility, and egotism, that have likewise marred especially his later writings. That we do not point out these faults and blemishes without reasonable cause, we instance in proof of the author's *affectation*, the everlasting straining after epigrammatic smartness and point, the profuse sprinkling of French and Italian quotations, and the constant introduction of phrases peculiar to particular classes and professions, which are any thing but pure English; and we certainly do not regard it as otherwise than *puerile* in Mr. Willis gravely to inform his readers through the pages of the "*Corsair*," that Bulwer and Count D'Orsay had formed an alliance to introduce the

white cravat into fashion—that the latter's "beauty is in high preservation—his life altogether reformed—his diet milk, and his hour of retiring to bed ten o'clock, P. M." That "Lady Blessington's different carriages, are each, in their style, the most beautiful turn-outs in England"—that the "Crack-men ride without martingals, and the best turn-outs are driven without a check rein"—that the queen's riding hat is not becoming, owing to the shape of her nose; and that her majesty, when in full gallop, is apt to hold her mouth open. These are but a few of the very important similar items of information with which the republicans of New York are amused and enlightened. It is possible that the exquisites and "crack-men" of old Gotham may relish such diet, but for ourselves we confess that our appetites would incline us to prefer more simple and solid food.

The sin of egotism is too glaring, throughout these London jottings, to escape the most careless observer. Without a superabundance of charity, a person might well suppose that the end and aim of the author was to celebrate his own achievements and illustrate his own importance in the circles of high life. Indeed Mr. Willis's personal vanity so constantly throws him into the foreground of his own pictures, that it is often unpleasant, if not painful, to contemplate them. In representing the great difficulty of procuring admission to "Almack's,"—the *sanctum sanctorum* of London fashion,—he fails not to inform us that the Lady Patronesses (who we shrewdly suspect are a very silly set of beldams,) had favored him with a ticket; nor does he conceal the boast, that in that mysterious inner temple of exclusiveness, he, Mr. N. P. Willis, felt quite at home in familiar *tit-e-a-tit-e* with dowagers of rank and maids of honor, conversing about the busts of English and French Venus's—and the pretty ankles of American women. He is quite familiar with the highest political dignitaries,—with the most renowned in art, science and literature,—with the most splendid in title and wealth, and the most beautiful in the empire of fashion. He sits in the opera box and chats familiarly with Lord Brougham—rides out with the "beautiful" count D'Orsay, (very bad company we should think,)—perambulates with Bulwer—is invited to Lady Stepney's and Lady Morgan's, along with the Persian ambassador and his royal highness the duke of Cambridge,—sits by "Boz," at the dinner to Macready, which is presided over by another royal duke—dines one day with a whig baronet, and the next with three tory lords—and, in fine, neither eats nor drinks, rides nor walks, without coming in close contact with some of the "Corinthian pillars of polished society." But one of the best of good jokes remains to be told. Our countryman, Webster, it is known, is now on a visit to London, and his great reputation has won for him, there, independently of the usual attentions paid to distinguished strangers, the particular courtesy and kindness of such men as Brougham, Hallam, Milman, &c.—and yet he, we are told, is indebted to Mr. Willis for the great favor of satisfying the higher circles that the American statesman, orator, lawyer Webster, is not Mr. Noah Webster, who wrote the dictionary. This most interesting fact is communicated by Mr. Willis himself in No. II of the "Jottings down in London," and the natural inference will be, let who will imagine

the contrary, that Mr. Willis is a much greater man in London, than Mr. Webster is, or can ever possibly be. We confess, when we first read this self-soothing paragraph from the author of "First Impressions in Europe," "Letters from Under a Bridge," &c. &c., we could not suppress something like a smile of derision, and it was difficult to avoid the conclusion, either that Mr. Willis's *last impressions* were entirely erroneous, or that his associates in London high life, were a much more egregious set of ninnies than we had supposed them to be. Can it be that the statesman who has so long shared the supremacy in the American Senate, from the time of the war of 1812, to the present moment, should not be distinguished by intelligent Englishmen and English women from the highly respectable lexicographer of the same name? We own, if the fact be true, it is most marvellous.

After informing us, in Jottings, No. II, that "there are great numbers of American ladies in London, and that they seem to be a good deal the fashion"—that "Mrs. Van Buren's quiet and high bred manners are very much talked of,"—and that "Major Van Buren himself, like his brother, has been received quite as a prince royal—admitted to the floor of the House of Lords," &c.—Mr. Willis makes the following very unchivalrous remark: "Miss Sedgwick is here, *but she seems to require a trumpeter.*" Now we ask, in the name of charity, why did not Mr. Willis step forward and become the trumpeter of this neglected lady himself? No one better knew her distinguished claims to respect and attention; and he, who could familiarise with lords, and flirt with duchesses, who could even place the character and qualifications of Daniel Webster himself in their true light before London society, could have had no difficulty in trumpeting Miss Sedgwick. Cruel, unkind "*Corsair!*" Not only to turn your back upon your gifted countrywoman, but absolutely to wound the feelings of herself and friends by publishing a sarcasm upon her friendless condition! Verily, Mr. Willis must suppose that no misfortune can befall man or woman, so great, as to be out of the fashion. That the elevated mind of the authoress of "*Redwood*" and "*Hope Leslie*," could sustain itself, even against the affliction of London neglect, we do not doubt; and that she would be more likely to be contaminated than improved by intimate contact with its heartless society we doubt still less. Of what materials that society is composed—how frivolous, insincere, rapid and unprincipled—is abundantly shown by Mr. Willis himself in almost every page of his "Jottings."

We have now to prefer a charge against Mr. Willis of very grave import—one which we should gladly have passed over, but that our agency, humble as it is in the moral and literary censorship exercised by the American press, imposes upon us a strong obligation to notice it. It is, that in one gross instance at least, he has manifested a reckless disregard of his own reputation, by wantonly betraying to the world conversations of a private, delicate, and confidential nature. That we do not venture this accusation rashly, we transcribe from Mr. Willis's own account of his sayings and doings at "Almack's!"

"In the course of the evening I found myself *vis-à-vis* in the quadrille to the queen's most beautiful maid of honor. She is daughter of lord Rivers, rather tall, and

combining a most majestic *embonpoint* of figure, with a slightness of limb, and a slenderness and stateliness of neck, seldom seen in such graceful proportion. To the three hundred pounds a year, which the maids of honor receive for dress, the queen, my partner informed me, has added another hundred, thinking the sum insufficient. You know, probably, that on their marriage they receive also a dowry of one thousand pounds. Then there are the ladies in waiting, who are of the highest rank of nobility, and the bed-chamber woman, who receive also three hundred pounds a year, and are generally ladies of good birth in reduced circumstances. These all take their turns of service for two months together. My pretty and noble informant gave me these household statistics, very good naturedly, between *pastorals* and *dos à dos*; and as she was closely connected with those who had the best opportunity of knowing, I asked her a question or two touching the personal qualities of her majesty. She thought Victoria fancied herself very beautiful, 'which she was not,'—and a very good horseman, 'which she was not decidedly,'—and that she was very impatient of a difference of opinion when in private with her ladies. She admitted, however, that she was generous, forgiving, and 'cleverer than most girls of her age.' When alone with two or three of her maids, she said the queen was 'no more like a queen than any body else,' and was 'very fond of a bit of fun or a bit of scandal—or any thing that would not have done if other people were present.' As far as it went, I should think this might be relied on as the impression her majesty makes upon those who daily associate with her."

Now, we hold it to be clear, that whether the beautiful and confiding daughter of lord Rivers, should ever be informed or not, that these revelations of palace secrets had been published to the world, Mr. Willis stands wholly unjustified in the part that he has acted. Whether the young lady loses or retains her place near the queen's person, for her indiscreet candor in representing majesty what it really is—a jest,—the odium will nevertheless cling to Mr. Willis for having wound himself into the confidence of a credulous young girl with the deliberate design of betraying her. This is indeed a species of *piracy*, or "plundering by the way," which, however it may suit the taste or accord with the designs of a "*Corsair*," will merit the reproof of every honorable man, and every honorable woman too.

Before we conclude our notice of Mr. Willis, and his new periodical, we will state, that in No. IV of his "Jottings," he announces, that he had engaged, as "a regular correspondent of the *Corsair*," a Mr. Thackeray, who is styled the "cleverest and most gifted of the magazine writers of London." He is also stated to be the author of the "Yellow Plush Papers," and the "Reminiscences of Major Gabagan"—"a writer for Frazer, and Blackwood, and the principal critic of the Times." In fact, the editor of the "*Corsair*" represents him "as one of the cleverest and most brilliant of periodical writers"—and when they parted, Thackeray was to pass over to Paris the day after, and forthwith commence his weekly contributions to the "*Corsair*." Now it so happens, that the first letter of this "cleverest and most brilliant of periodical writers" has appeared, and we have read it through with great eagerness and vivid anticipation. How sadly are our

hopes sometimes destined to be crushed! We do not find in it that evidence of superlative merit which the author of "Pencilings by the Way" would discern at a single glance. On the contrary, we think that Mr. Thackeray has much of the dandyism, affectation, and puerility of Mr. Willis himself. Let us take, for example, one or two of the concluding paragraphs in the first letter from Paris:

"What feelings we may have in finding good friends and listeners among strangers, far, far away—in receiving, from beyond seas kind crumbs of comfort for our hungry vanities, which at home, God wot, get little of this delightful food—in gaining fresh courage and hope, for pursuing a calling of which the future is dreary, and the present but hard. All these things, O "*Corsair*," had better be meditated by the author in private, than, as the fashion is now-a-days, poured over yards of paper, in fluent streams of ink. With which, farewell. I hear the dinner bell ringing, and lo! white aproned scullions bear smoking soups across the court."

We doubt very much whether Mr. Thackeray will elevate the literary tone of this country, which is now low enough, Heaven knows. He belongs to that school, we apprehend, whose whole ambition it is to minister to the frivolous tastes and appetites of the most frivolous and fantastic class among us—the exquisites in literature as well as in dress and manners. Strong sense and classical refinement he may have, and doubtless has,—but we are afraid, like a great many others, he looks upon literature as a trade, and speculates far more upon the amount of pleasure he is to give, than the good he is to do. Let us not, however, prejudge this "regular correspondent" of the "*Corsair*." Some of his subsequent efforts may justify the high-sounding notes of praise with which his first appearance before the American public has been heralded.

We have thus indulged in free, but we hope impartial, commentary upon Mr. Willis's metropolitan gossip. We have no expectation, however, that any arrow which we can speed, will even ruffle his plumage. Like the peacock in his stately strut, the gentleman is evidently so much in love with himself that even keener reproaches than ours would fail to disturb his composure. We leave him, therefore, to his destiny, consoling ourselves with the reflection, that our remarks may possibly benefit others if not the author of "*Jottings Down in London*."

— H.

THE POETS OF AMERICA,

Illustrated by one of her Painters. Published by S. Colburn,
New York.

We have just received a copy of this truly splendid book. It contains selections from our best poets, several of them elegantly illustrated. We think it, decidedly, the most tasty American work we have ever seen, and indeed we know of no English publication equal to it in that point. It will be a choice Christmas and New Year's gift. We intend to bestow upon it a longer notice hereafter, and to transfer some of its gems to the pages of the Messenger.

CURRENTE-CALAMOSITIES:

TO THE EDITOR.

By the Author of "*The Tree Articles*."

NOS. IX AND X.

UNPACKING MY BOOKS.

Two numbers in one, this month, my dear Messenger. The heats of summer have kept my pen idle, while I have been striving to find a cool corner in this big Babel, in which to lie down and simply live, worklessly. In the midst of this sloth-like life, I have suffered the ninth month, since I began these papers, to slip away, without taking pen in hand for your behoof, and here I find myself, early in September, a cold north-east wind blustering around my windows, while a clear anthracite fire glows merrily in my grate, unpacking my library from the boxes in which, for two years they have been lying *perdu*. As the tone of these papers has ever been desultory and various, I will even make up this double number out of the random readings and reflections, which are incident to my employment.

And what is this? "Shakspeare, in seven volumes, with notes by Singer." This is the Boston edition of Hilliard and Gray, and defies comparison in a key loud enough to be heard by the Murrays, the Colburns, and the Valpys, over-sea. What paper,—how smooth, white, and glossy! What ink,—how black, clear, and equal! What binding,—but that is another man's matter. I love a dark green goat back, with half binding of the same, marble sides, and edges, plainly lettered, and a broad rich gilding in the centre. I hate *ruling* on my books: *tooling* in every other variety of shape and form than that. How beautifully this volume opens, and what have we first? HAMLET! The line?

"But look! the morn, in russet mantle clad,
Walks o'er the dew of yon high eastern hill!"

Are you not a great admirer of TIMES AND SEASONS,—each for itself? I am: and have never yet been able to settle it to my own satisfaction, whether morning or evening, twilight or midnight, noon-day, or day-dawn is the happiest hour for me. Something depends upon the mood in which these seasons severally find me,—and yet, while enjoying each, each seems, in turn, the loveliest. All, as they change, seem fraught with the same spirit of beauty and delight,—all possess for me the power alike, to bless and to beatify. What can be more descriptive of the dawn of day than these two lines, over which I have been poring? or these, in HENRY VI?

"See! how the Morning opens her golden gates
And takes her farewell of the glorious sun!
How well resembles it the prime of youth,
Trimmed like a younker, prancing to his love!"

Or these, in the same play?

"—— the morning's war,
Where dying clouds contend with growing light;
What time the shepherd, blowing of his nails,
Can call it neither perfect day nor night!"

Here, too, is a most expressive bit of coloring, in the next play, in order; RICHARD III.

"The silent hours steal on,
And flaky darkness breaks within the east!"

From CYMBELINE, too!

"Hark! hark! the lark at Heaven's gate sings,
And Phœbus 'gins to rise:
His steeds to water at those springs,
On chaliced flowers that lie.
And winking mary-buds begin
To ope their golden eyes,
With every thing, that pretty bin,—
My lady sweet, arise!"

Yes! MORNING's breath is indeed the gentlest, sweetest, and most invigorating of all the breezes that fan the brow. Who needs to be told, that the hour of the birds' matin-song is the time to enjoy the loveliest music, and to see the gayest sights? The warbling of a thousand harmonies, and the flashing of a thousand glancing colors, and the scaling and soaring away of many thousands of tiny feathered forms amidst the clear blue heavens! Reach me that MILTON. It is to stand on the same shelf with the Shakspeare. Ah! Here is a passage in point!

"And now went forth the morn,
Such as in highest heaven arrayed in gold
Empyrean; from before the vanished night
Shot through with orient beams."

Some of our own poets have done fitting homage to "this sweet hour of prime." FRISBIE, (if I do not misquote,) has these lines:

"His genial rays the Sun renews;
The scene is bright with glittering dews;
The blushing flowers more beauteous bloom.
And breathe more rich their sweet perfume."

And thus DAWES:

"The laughing hours have chased away the night
Plucking the stars out from her diadem; [beautiful!]
And now, the blue-eyed morn with modest grace,
Looks through her half-drawn curtains in the east,
Blushing in smiles, and glad as infancy!

*The mountain-tops
Have lit their beacons,—and the vales below
Send up a welcoming. Nature hath
The very soul of Music in her looks,—
The sunshine and the shade of Poetry!"*

Who comes next? Old COWLEY, as I live! An antique, in black calf, with a score of worm-holes in each cover, and mousings made in the edges. Rare old COWLEY! "The eleventh edition, adorned with cuts; 1710." Doubtless a wonderful book in its day! It contains all the works of this celebrated poet, published from the MSS. of the author. I wish I could copy a portrait of SIR ANTHONY VANDYKE, which is among the "cuts" with which this curious old volume is "adorned." My readers would thus have a rare specimen of engraving from the burin of "M. V. Gucht, sculp.," who was, doubtless, the Charles Heath of his day. It represents the great painter in a reverie, half resting on his elbow, the forefinger of the hand that leans playing with the points of his sur-coat, and the little finger ornamented with a stone seal-ring, covering almost the whole joint. If Mon. Von Gucht were a faithful limner, Vandyke was certainly no beauty. As the portraiture of a Yorkshire yeoman, or a Cornwall miner, one would have a great deal more confidence in the fidelity of the sketch.

It was COWLEY who called "books, my best friends:" and it was he, too, who asked,—

"What shall I do, to be forever known,
And make the age to come mine own?"

Here are sense and philosophy:

"Friendship is less apparent, when too nigh,
Like objects, when they touch the eye.
Less meritorious, then, is love;
For, when we friends together see,
So much, so much both one do prove
That their love then seems but self-love to be!"

He thus describes HOPE:

"Empty cloud, which th' eye deceives,
With shapes that our own fancy gives,
A cloud, which gilt and painted now appears,
But must drop presently, in tears."

Here is an EPIGRAM, which must have "told home" to the painter, against whom the poet levelled it. It was written on viewing a badly painted picture of Prometheus:

"How wretched does Prometheus' state appear,
Whilst he his second misery suffers here!
Draw him no more, lest, tortured as he stands,
He blame great Jove's less than the painter's hands!
It would the Vulture's cruelty outgo,
If once again his liver *(Aus)* should grow.
Pity him, Jove; and his bold theft allow!
The flames he once stole from thee, grant him now!"

Place COWLEY next to MILTON, and take we up another. "Aiken's British Poets:" good! A glance through its pages before we set it up.

SAMUEL DANIEL. The author of a history of England, and poet-laureat of Elizabeth. He was born in 1562, and died in 1619, in Taunton, Somersetshire. In addition to his celebrity as an elegant historian, a clear and lucid politician, and a fine moral writer, he has handed down to posterity a distinguished fame as a poet. His plays are not the best of his productions, though they are very far from being meritless. A celebrated writer has remarked of him that he was the Atticus of his day. Here is one of his sonnets; certainly a most remarkable specimen of the poetry of that golden age of literature. Beautiful conceptions, and just and perfect versification characterise this effusion. It will be seen that a disappointed lover is addressing an inexorable fair one:—

"Restore thy tresses to the golden ore;—
To Cytherea's son those curls of love;—
Bequeath the heavens the stars that I adore,
And, to the Orient do thy pearls remove.
Yield thy hands' pride unto the ivory white,—
T' Arabian odors give thy breathing sweet,
Restore thy blush unto Aurora bright;
To Thetis give the honor of thy feet;
Let Venus have thy graces her resigned,
And thy sweet voice give back unto the spheres:
But then, restore thy fierce and cruel mind,
To Hyrcan tigers, and to ruthless bears;
Yield to the marble thy hard heart again,
So shalt thou cease to plague, and I to 'plain!"

SIR PHILIP SIDNEY. The imagery in the first three or four lines of this SONNET, by the graceful SIDNEY, is rather forced, and contrasts strongly with the beautiful impatience of love, so strikingly developed in the latter verses.

"Be your words made, good sir! of Indian ware,
That you allow me them by so small rate?
Or do you courted Spartans imitate?
Or do you mean my tender ears to spare,
That to my questions you so *total* are?
When I demand of Phœnix, Stella's state,
You say, forsooth, you left her well of late!
Oh God! think you that satisfies my ear!"

I would know whether she do sit or walk ?
 How clothed ? how waited on ? Sighed she, or smiled ?
 Whereof ? with whom ? how often did she talk ?
 With what pastime, time's journey she beguiled ?
If her lips deigned to sweeten my poor name ?—
Say all ! and all well said, still say the same !

PHINEAS FLETCHER calls "FLATTERY, the rich coat's moth."

PRIOR has this distich : which one would think would operate as a cure for poetry, indeed :

"Seven wealthy towns contend for Homer, dead :
 Through which the living Homer begged his bread !"

Who has never heard of the famous question which puzzled all the wise men of Greece, giving rise to as much controversy among these sages as the authorship of Junius among modern speculators ? "If a man tell me that he never speaks the truth,—am I, or am I not, to believe him ? If he never does speak the truth, he is not to be believed now ; if he tells truth, now, he lies, because he says he never does so !" Now here is a poet, in the volume before me,—the celebrated DONNE, who expresses a similar idea in a single couplet:

"I am unable, yonder beggar cries,
 To stand or go. *If he says true, he lies !*"

JOHN DONNE was an English poet and divine, and was born in London, in the year 1573, being a descendant, by his mother's side, from the family of the great Sir Thomas More. In 1621, he was presented with the deanery of St. Paul's, by the hands of king James, which monarch was so attached to him that he invited him to dine at his own table ; and then facetiously apprised him of the advancement he had proposed for the poet-preacher. "And now, Doctor," said his majesty, "if you like the dish I have given you for dinner, take it home, and, after saying grace over it, carve it up as may best suit your taste, and much good may it do you !" After his death, there was erected over his remains a monument in the cathedral of Saint Paul's. His poetry was not equal to that of some of his contemporaries, and consisted chiefly of light effusions, as songs, sonnets, epigrams, &c. The celebrated Dryden has said of Donne, that he was "the greatest wit, it not the first poet, of the nation," at that time. And Lucius Cary, Viscount Falkland, eldest son of Henry I, who was killed at the battle of Newbury, in 1634, has borne this testimony to his character :—"The doctor may justly be called the most witty and most eloquent of modern divines." The famous Izaak Walton has left on record a very interesting memoir of this writer, in his "Lives of Eminent Englishmen," a copy of which, though very rare, I have had the good fortune of seeing.

The following lines from old DONNE are peculiarly quaint and original, containing some beautiful ideas, and conveying, in simple but affecting language, a delicate and impressive moral reflection :

"DONNE'S VALEDICTION, 1608.

As virtuous men fall mildly away,
 And whisper to their souls to go,
 While some of their sad friends do say,
 'The breath goes now'—and some say, 'no :—'

So let us melt, and make no noise,
 No wind-sighs, nor tear floods us move,—
 'Twere profanation of our joys
 To tell the laity our love."

So much for AIKEN. Bring us the next. "Anecdotes of Literature, and Scarce Books." By WILLIAM BELOE. I remember well the day and place, when and where I purchased this book. It were as good as the best eyewater to an antiquarian with lamp-bleared optics, to witness such a stall as that. But hang reminiscences,—and let us open the volume ! Page 27th, volume ii. (two volumes in one ;) a pair of verses from "The Rival Friends" by HALLSTED, who died in 1632. The poet, by a most beautiful prosopopœia, calls upon Grief, as a relentless creditor, to whom a debt of tears is due, which will not flow at his bidding.

"Have pity, Grief ! I cannot pay
 The tribute which I owe you, tears ;—
 Alas ! those fountains are soon dry,
 And 'tis in vain to hope supply
 From others' eyes—for each one bears
 Enough about him of his own
 To spend his stock of tears upon.

Woo then the gentle heaven's love
 To melt a cloud for my relief ;—
 Or woo the deep, or woo the grave,
 Woo what thou wilt, so I may have
 Wherewith to pay my debt ;—for Grief
 Has vowed, unless I quickly pay,
 To take both life and love away."

And here is another, by P. THOMPSON, author of "The English Rogue," &c. 1668. A song, free and spirited, fine and sparkling enough for Anacreon Moore himself. It has the charms of age and rarity, simplicity, and striking beauty. How quaint the thoughts,—how smooth and euphonous the versification !

"What need we use many besatches,
 Or trouble our brain with long speeches ?
 If we love, 'tis enough—
 Hang poetical stuff,
 As the rule of honesty teaches.

Why should we stand, whining like fools ?
 Or woo by Platonical rules ?
 If they love,—we'll repay 't,
 If not,—let them say 't ;
 What need we the help of the schools ?

But *this* must be won by romances,
 And *that*, by verse and fine dances ;
 A *third* does delight
 In a song—&c. &c.

This must be extolled to the sky,—
 That you get, do but flatter and lie :
 But that lady's for me
 That loves fine and free,
 As real and ready as I !"

Aha ! here are some of the moderns, all in a row. Give them air ! Begin a new shelf ! Whom have we here ? SHELLEY ! "Lines Written in Dejection." I had a friend, whose composition contained about as many grains of deceit and duplicity as of poetical taste. He would often evince this by murdering, most remorselessly, a most beautiful idea of some favorite poet of mine. Upon my reading these touching stanzas to him, he stopped me, *in limine*, with the question ; "Lines written in Dejection ? *Where's Dejection ?* Somewhere near Naples, I suppose !"

And here are LEIGH HUNT's Works. Do you remember his "Paulo and Francesca ?" The whole of it is as sweet a morceau as ever was enjoyed. I have it nearly all by heart, and have lingered over that tablet in my memory upon which it is impressed, for many a

luxurious hour, as, "upon a summer afternoon," I have stretched myself in sleepy indolence, beneath the oak boughs, that have been waving over that self same sward, for hundreds of years. Here is a quatrain from it.

"One day,—'twas on a summer afternoon,
When airs and gurgling brooks are best in tune,
And grasshoppers are loud, and day-work done,
And shades have heavy outlines in the sun."

Was ever any thing more beautiful, and natural, and sweet?

There are people among "the wise ones of the earth," who love to laugh,—the heartless and fanciless!—at the affected and foolish, and silly prettinesses, and sweet-nesses of Leigh Hunt. They may be better judges than I am of taste and genius,—but, for a summer poet, a bard to enjoy amidst trees, and brooks, and leafy shades, there is none among all the moderns whom I hold more dear than the author of "RIMINI." What can be richer, finer, better than that gorgeous description of the garden,—so full of beauties, so overflowing with delightful thoughts, so instinct with every characteristic we love to discern in poetry! The man who can sneer at such lines as these, because they are quaintly, (or, as he would say, affectedly,) expressed, deserves to have a Bævius for his laureat, and "Cottle's Alfred" for his vade-mecum.

"There was the pouting rose, both red and white,
The flamy heart's-ease, flushed with purple light;
Blush-hiding strawberry, sunny-colored box,
Hyacinth, handsome with his clustering locks;
The lady-lily, looking gently down,
Pine lavender, to lay in bridal gown,
The daisy, lovely on both sides,—in short,
All the sweet cups to which the bees resort."

* * * * *

"And all about the birds kept leafy house,
And sung, and sparkled in and out the boughs;
And all about a lovely sky of blue
Clearly was felt, or down the leaves laughed through,
And here and there, in every part, were seats,
Some in the open walks—some in retreats,
With bowering leaves o'erhead, to which the eye
Looked up, half sweetly, and half awfully—
Places of nestling green—for poets made,
Where, when the sunshine struck a yellow shade,
The slender trunks, to inward peeping sight,
Thronged in dark pillars up the gold green light."

TAYLOR'S "HOLY LIVING AND DYING." Put him on a new shelf: we will have a row of duodecimos, there. But first, what is that my eye caught about "women's tongues?" oh!

"These women have tongues rough as cats,' and bite like an adder. All their reproofs are scoldings: their common intercourse is open contumely."

This is by no means a fair specimen of old Jeremy's manner. He was a quaint and forcible writer, and has been called "THE SHAKESPEARE OF DIVINITY."

Here is another set of large volumes for THE POET'S SHELF! "The works of BEAUMONT and FLETCHER." These poets lived in the latter part of the sixteenth, and early in the seventeenth centuries. The former died at about thirty years of age, and was buried in Westminster Abbey: the latter, of plague, at London, aged about fifty. It is said that "Rare Ben Jonson" submitted his dramatic writings to Beaumont for correction, and even borrowed largely from

him, in the contrivance of his plots, and the general style of his composition. It is not known what particular share Beaumont and Fletcher bore in the composition of their plays, though the latter appears to have possessed the rich vein of brilliant wit, so perceptible in the joint productions of the two: while Beaumont, with more judgment and taste, was employed in tempering, correcting, and perhaps pruning the sparkling sallies of his partner's exuberant fancy. This opinion must, I think, obtain with those who read those works of the one, in the composition of which the other had no share.

The dramatic works of these authors are filled to overflowing with coarse allusions, profane and vulgar humor, and ribald jests: yet they contain scenes of great power, and scenes of unequalled strength. The age in which they were written, when the licentious courts of "the merry monarch," and of his father, imparted their baneful influence to the formation of the national manners of the people of England, was one peculiarly favorable to the success of such productions. The wise and good were charmed with the imaginative and highly-wrought descriptions of human nature, in all its workings, even though, at the same time, their approbation was awarded simultaneously with that of the vulgar and unlearned, who were "capable of nothing but inexplicable dumb show," ribaldry and obscenity. Now, after all, there were few of the plays of these authors, which, through all their imperfections, had no redeeming excellencies: and, indeed, I know of but one, in all these volumes, of which this remark could, with justice, be made. This is a play, published in the year 1639,—full of disgusting and licentious slang, and weak as it is wicked. It is called "MONSIEUR THOMAS;" and appears to have been the production of Fletcher, alone; although here published in the name of both.

Beaumont and Fletcher's dramatic works may thus be read to great advantage, and with much pleasure, by those who well know how to separate the scenes, which naturally repel the virtuous mind, from those that are full of beauty and morality: but, in the hands of the reader, who only seeks the gratification of low and licentious curiosity in the perusal of their pages, the dramas of these authors may doubtless be made vehicles for the dissemination of a wicked and depraved taste.

I have just opened the volume before me to an instance in proof,—the play, called "THE CUSTOM OF THE COUNTRY." The subject, like many others selected by these poets as the themes of their dramas, leads to the introduction of many disgusting scenes: still, we want nothing from the dunghill but its jewels, and these are scattered profusely upon it. This "Custom," which made every newly married woman in Scotland sacrifice her honor to the landlord of her husband, is said, (but upon slight authority, so far as I could ever trace it,) to have existed in that country, from the year of grace 535 to 1061. Blackstone rather yields, I believe, to the opinion that it did, and it has been mentioned, I know, by various writers besides, as having existed for many years.

This drama is full of the most varied and interesting incidents. It is ingenious in its plot, and in its under-plot,—replete with fine sentiments, and professing to

embrace, as its main object, the purest virtue. Yet, with wonderful inconsistency, it is shamefully low and licentious in some of its subordinate parts, and one of its principal characters (Rutilio) is exhibited in the most disgusting views imaginable. He is represented as vile, but frank and open-hearted—like “Charles Surface” and “Tom Jones:” a picture of human nature, which cannot be condemned with too much severity.

If we can tear out the threads of coarseness, which so mar the moral of this play, and exhibit, in any degree, its sterling beauties, perhaps the scenes, from which the mind of the strictly virtuous would shrink, may be passed by, as only evincing the depravity of the age in which they were written; while, it is to be hoped, such readers may find reason to be convinced, that the poets themselves felt strongly the elevation of that virtue, which they have vindicated with so much eloquence. But so deeply, I admit, are the delineations of Vice interwoven in the pictures of these authors, that Beaumont and Fletcher can be safely read by those only, who, admiring genius, may not be swayed by its obliquities, nor be led by it to taint a single thought, nor awaken a vulgar and base emotion, even for a moment.

And there are, indeed, purer and safer fountains. The writers before us have nothing of genius which SHAKESPEARE and MILTON had not. Let the mind and the heart be accustomed to the refined, the pure, in morals and in taste, and then it may safely venture to gather the riches, which unblest genius has sometimes perverted into ornaments of depravity, and nobly and successfully redeem them, to grace the cause of human greatness, purity and virtue.

Having already alluded to the characteristics of RUTILIO, one of the most important of the “*dramatis personæ*” before us, it is necessary to explain that ZENOCIA, the heroine of the piece, resists the “Custom of the Country” I have described; and, from the consequences of this, her noble and virtuous bravery, is woven the plot. Into her mouth, the poet puts many fine and beautiful sentiments: and here is one of them:

“The purest springs,
When they are courted by lascivious land-floods,
Their maiden pureness, and their coolness perish;
And, though they purge again to their first beauty,
The sweetness of their taste is clean departed.”

Who, from his soul, does not despise the man who can torture this passage into any thing exceptionable?

Rutilio, vile as he is, is filled with admiration of the pure and virtuous love of Zenocia and (his brother) ARNALDO. In the speeches of Rutilio there are spirit and wit, but I must pass them over. The black threads prevail in this portion of the play. Rutilio, Zenocia, and Arnaldo effect their escape, and they leave their country to preserve her fame. They then fall into the hands of enemies, and so closes act the first.

The second act commences, (as if entirely unconnected with the other,) with the representation of a vain, boasting Portuguese, (DUARTE,) whose insolence is overheard and reprov'd,—as he is talking to his page,—by his uncle, (MANUEL,) and his mother, (Guiomar.) The former thus addresses him:

“You are too insolent,—
And those too many excellencies that feed
Your pride, turn to a pleurisy and kill
That which should nourish virtue. Dare you think

All blessings are conferred on you alone?
You're grossly cozened. There's no good in you,
Which others have not. Are you a scholar? So
Are many, and as knowing! Are you valiant?
Waste not that courage, then, in brawls; but spend it
I' th' wars, in service of your king and country!”

In the next scene, Zenocia is introduced at Lisbon, as the prisoner of a sea-captain, (LEOPOLD,) who employs her to be a servant to HIPPOLITA, of whom he is enamored. Leopold had suffered Arnaldo, and Rutilio to escape, by plunging into the sea. In the next scene they appear, too, at Lisbon. Hippolita, meanwhile, had, by chance, seen Arnaldo, and become much in love with him, and had sent ZABULON, a Jew, to bribe his fidelity and virtue. The Jew finds the brothers, and is left alone, in conversation, with Arnaldo. Rutilio, immediately after, accidentally witnesses a quarrel between the Portuguese, Duarte, and his brother, Arnaldo. He takes sides with the latter, is insulted by the former, they fight, and Duarte falls. Rutilio, making his escape, encounters the mother of his opponent. She is represented as kneeling, in solicitude for her son's long absence:

“I'll rest no more
Till he returneth! Take away the lights too;
The moon lends me too much to find my fears;—
And those devotions I am to pay,
Are written in my heart, not in this book,
And I shall read them there, without a taper!”

Rutilio claims her protection. Guiomar conceals him; and says:

“How he quakes!
Thus far I feel his heart beat! Be of comfort,—
Once more I give my promise for your safety.”

The officers enter with the body of Duarte, and say that they have traced the murderer to the house of the mother. The mother, however, keeps her word, and Rutilio is liberated. Guiomar says:

“Come fearless forth,—but let thy face be covered,
That I hereafter be not forced to know thee;—
For motherly affection may return
My vow, once paid to Heaven,” &c.

The third act commences with the introduction of Zenocia, by Leopold, as about to become the favorite attendant of his mistress, Hippolite. He offers her encouragement, to soothe her melancholy, as follows:

“Make much of what you're mistress of—that beauty;
Expose it not to such betraying sorrows:—
When you are old, and all those sweets hang withered—
Then sit and sigh.”

In the next scene, we find Arnaldo conducted by the Jew (Zabulon) to a scene of festivity, at the same house, (Hippolita's,) to which he had been invited, by the lady's procurer, as already described. I would remark, *en passant*, that this scene may possibly have been in the mind of Miss Porter, in her tolerably poor story of “The Hungarian Brothers;” and, perhaps, again, in that of the more poetical Moore, while he wrote that gorgeous description of the blandishments and seductions, which Selim so beautifully and nobly rejects, in “The Veiled Prophet of Khorassan.” This scene is very exceptionable in its descriptions; but Arnaldo resists, in all the dignity of virtue. He even out-Selims Joseph himself! He says to Hippolite:

"— give me leave, more now than e'er, to wonder,
A building of so goodly a proportion,—
Outwardly, all exact,—the frame of heaven,—
Should hide, within, such foul inhabitants.
You are as fair as if the morning made you—
Imagination never made a sweeter.
Can it be possible this frame should suffer,—
And, built on slight affections, fright the viewer?
Be excellent in all, as you are outward,
The worthy mistress of those many blessings
Heaven has bestowed;—make 'em appear still nobler,
Because they are trusted to a weaker keeper."

In the next scene, Hippolita, is informed that Arnaldo is arrested (on her accusation,) and condemned to be beheaded, on the testimony of Zabulon, for a crime, which, of course, he has never committed, the murder of Duarte. Then we are introduced to Clodio, (who is the landlord of Arnaldo, and to whom "The Custom" required the virtue of his tenant's new wife should be sacrificed; and) who, with promises of "honorable love," had followed them to Lisbon, to seek out Zenoccia. He is in disguise, and meets the Governor, with Arnaldo, in chains. A physician informs the Governor that Duarte will recover, and Hippolita, (with Leopold, Zabulon, and Zenoccia,) enters with the design of rescuing Arnaldo; for, she says:

"My love,
Which made me first desire him, then accuse him,
Commands me, with the hazard of myself,
First to entreat his pardon, then acquit him."

Arnaldo is pardoned, and grows jealous upon finding his wife the attendant of Hippolita.

At the commencement of act the fourth, we find Duarte restored to health, and cured of pride. He resolves to discover and forgive the person who had wounded him, and, for that purpose, his recovery is concealed. Leopold, jealous of Arnaldo, bargains with a bravo,

"Who had perused all dungeons in Portugal,"

to give Arnaldo a beating, "but the obduracy of the rascal makes him tender." Zabulon acquaints the Captain that he has promised Arnaldo a conference with Zenoccia. Upon this interview Hippolita and Zabulon enter unperceived. The scene deepens in interest. Hippolita is resolved on vengeance, and the Jew prepares to strangle Zenoccia. Arnaldo sues for the life of his wife at the feet of her mistress, upon which Zenoccia says:

"Kneel not, Arnaldo! Do her not that honor!
She is not worthy such submission!
I scorn a life depends upon her pity!
Proud woman! do thy worst, and arm thine anger
With thoughts as black as hell,—as hot and bloody!
I bring a patience that shall make thee blush!
An innocence, shall outlive thee, and death too!"

This is great poetry, and so is that which follows. Arnaldo is then renewedly solicited for his love, by Hippolita, and Zenoccia thus expostulates with him against his consenting:

"If thou dost, Arnaldo! If thou dost but move,—
But move one foot, to guide thee to this sin,
My curses, and eternal hate pursue thee!
Redeem me at the price of base disloyalty?" &c.

Clodio, (the landlord, to whom "the Custom" is due,) and Leopold, with the Governor, arrive at this juncture, and Zenoccia is released from servitude. In the next

scene, which I shall pass over, we have deep misery portrayed in close connection with its parent vice. Duarte then finds Rutilio, who begs him to carry proposals of marriage to his (Duarte's) mother, he (Rutilio,) not knowing her as such: (for Duarte pretends to be an enemy of the man, whom Rutilio supposes himself to have killed;) and suspects his mother, on learning that she had protected Rutilio. Hippolita is next seen contracting with a poisoner, who promises her that her, who takes his drugs,

"Health takes its last leave of her: meagre paleness,
Like winter, nips the roses and the lilies,
That spring, which youth and love adorned her face with."

Zabulon, soon after, reports this catastrophe to have actually occurred, and then the Governor and Clodio are introduced, lamenting the death of Zenoccia, in a scene of great beauty. This changes, and represents Duarte watching his mother, as she weeps over his picture, (she supposing him to be dead.) He presents himself disguised, and gives her Rutilio's proposal of marriage, narrowly observing her countenance, as she reads the letter. She resolves to dissemble with the writer, and thus to avenge the (supposed) death of her son.

Then we are called to see Zenoccia, supposed to be dying. Arnaldo says:

"Oh thou dread power!—
That madest us all, and, of thy workmanship,
This virgin wife—this masterpiece—look down on her;
Let her mind's virtues, clothed in this fair garment,
That worthily deserves a better name
Than flesh and blood, now rise and prevail for her!
Or, if these are denied, let Innocence,
To which all passages in heaven stand open,
Appear, in her white robe, before thy throne,
Once mediate for her! Or, if this age of sin
Be worthy of a miracle, the sun,
In his diurnal progress, never saw
So sweet a subject to employ it on."

Zenoccia, recovering a little from the effects of the poison, says:

"Oh! my best Arnaldo,—
Thou truest of all lovers! I would live,
Were Heaven so pleased, but to reward your sorrow,
With my true service!"

She then attempts to dissuade him from exposing himself to the infection the poison had created: upon which he declares, that

"Despite of fortune, in his death he'd follow her,
And guard his love,"

and the sentiments of the whole scene are in a very high moral strain. Hippolita and the poisoning minion are introduced, like Satan into Paradise, and Arnaldo addresses her in these beautiful and moving words:

"Are you there, madam? Now,
You may feast on my miseries. My coldness
In answering your affections; or hardness,
Give it what name you will; you are revenged of;
For now you may perceive our thread of life
Was spun together; and the poor Arnaldo
Made, only to enjoy the best Zenoccia,
And not to serve the use of any other," &c.

"We are now
Going our latest journey, and together
One only comfort we desire; pray give it!
Your charity to our ashes, (such we must be,)
And not to curse our memories."

Then come relentings. Hippolita is moved to tears. Clodio yields, also, and swears solemnly to destroy the barbarous "custom of the country," which has been the cause of all these mishaps. Then Hippolita, finding that Zenoccia and Arnaldo are perishing together, compels the poisoner to administer an antidote, and so undo the deadly charm.

We are next presented to Guiomar, waiting the arrival of her suitor, (Rutilio.) This is a splendid scene, and that part of Rutilio's character which is redeemed from his vices, is here exhibited with great spirit. Duarte attends him, still disguised. Rutilio is seized by Guiomar's orders, as the murderer of her son. Enter the Governor and Clodio, and Rutilio proposes to yield himself a willing sacrifice upon the altar of maternal revenge. Hereupon, Duarte makes himself known, and so

"The evening sets clear after the stormy day!"

Hippolita restores Zenoccia to health, and then smiles upon the patient and faithful Leopold. Guiomar sees no special objections in Rutilio, upon the whole, (though, I think, touching his morals, it suited so grave a personage as that high dame, to make an inquiry or two, just to save appearances, if nothing more!) Every body is reformed, who was bad; every body revived who was dead; and every body who was single, is married! And what does Arnaldo, but close the play, (as with good reason he should,) with these fine lines?

"Come, my Zenoccia!

Our bark, at length, has found a quiet harbor,
And the unspotted progress of our loves
Ends not alone in safety, but reward;
We instruct others by our fair example:
That though good purposes are long withstood,
The hand of Heaven still guides such, as are good!"

The play we have been reading, dear *lector*, together, is certainly one of the finest specimens of dramatic poetry in the language, and I sincerely hope you have found entertainment in its perusal. But I think you will find the poetry of "Valentinian," a tragedy, with Fletcher's name only affixed thereto, equally to your liking. If you will permit me, therefore, I will now go on with my "unpacking," in the meanwhile laying these volumes aside, in readiness to be resumed for the next number of these papers.

So, adieu for another month!

J. E. O.

New York, September 1, 1839.

BEAUTIFUL EXTRACT.

From Gallagher's Hesperian.

Young womanhood!—"the sweet moon on the horizon's verge"—a thought matured, but not uttered—a conception warm and glowing, not yet embodied—the rich halo which precedes the rising sun—the rosy down that bespeaks the ripening peach—a flower—

"A flower which is not quite a flower,
Yet is no more a bud!"

EXTRACTS

From a Poem "On the Meditation of Nature."

BY PARK BENJAMIN.

INTRODUCTION.

Of Nature's pure philosophy I sing:—

And my entire devotion and the flame
Of quenchless love upon her altar fling;

For she has ever been to me the same
Unchanging parent, generous and kind;
And all its better-nourishment my mind
Draws from her bosom, and my heart would be

Cold as an iceberg of the northern sea,
If, when I gaze on her undying forms,
I did not speak the gratitude which warms
The flowing water of its deepest fountains.

Her quiet vales and her majestic mountains,
Her angry seas, that struggle with the wrath

Of the fierce Tempest, rushing from the sky
To rend the earth in his destructive path,

Or flash revenge from his dark shrouded eye,—

Her still lakes, sloping in the starlight beams,
Her warring cataracts, her peaceful streams,
The boundless prairie where the eagle soars,

The solemn grandeur of her ancient woods,
The haggard rocks that guard her bending shores,

Her green retreats and leafy solitudes,
All fill my soul with reverential awe;

For every where I read the changeless law
That tells its immortality!

* * * * *

INVOCATION.

Let us go forth and hold communion sweet

With the invisible spirit that surrounds
Earth's silent altars—let us go forth to greet

The woven strains of most enchanting sounds
That stir the clear waves of the golden air;
Let us go forth and mutely worship there!

From life's unvarying round, oh let us steal

Some fleeting moments we may call our own,
When, unrestrained, the heart can deeply feel
The quiet happiness to be alone.

Alone with Nature in some voiceless glen,

Or by some forest brook, or on the height
Of some uprising hill—away from men,

The city's busy tumult and the sight

Of all the sons of pleasure and of pain,
Where the free soul must feel its human chain.

Then, if within our hearts reflected lie

The perfect glories of the earth and sky,

If every feeling they inspire be fraught

With the pure essence of exalted thought,

Well may we deem, that round each bosom's throne
Float the white robes of Innocence alone!

* * * * *

SKEPTICISM.

The man, who cannot see the light divine
Which circles round Creation's altar-shrine,
Can, through his tuneless spirit, never feel
The magic sweetness of her spirit steal:—

And though upon the sapphire arch above
Glowed the bright beacons of eternal love,
Vain, vain would be our ardent search to find
One star-beam mirrored on the skeptic's mind!

THE SUN.

Behold the Sun in his imperial height,
Beneath his eye uncounted planets lay—
Wide o'er creation pours his lavish light;
From the beginning he has ruled the day.
How kingly is his sceptre! see him wave
Its lustre o'er the firmament—and where
Fly the wild tempest-clouds? deep in a grave
Of rosy vapor sinks th' expiring air,
And o'er the east the rainbow's arch is thrown,
While sinks the Day-god, gorgeous and alone!
There's glory in his setting—but the time,
When, like a monarch, from his throne sublime
He gazes o'er the world in mightiest power,
Is in the silence of his rising hour.
On all alike his equal radiance streams;
The humblest flower receives his earliest beams,
The smallest fountain revels in his ray,
Beneath his glance old ocean's billows play;
His smiles upon the lowliest valley rest,
And proudly glisten on the mountain's crest;
He looks as sweetly on the cottage home
As on the splendor of a regal dome;
And each faint star, that gems the distant sky,
Drinks the full lustre of his glorious eye!

THE STARS.

Oh, when to rest the wearied day retires,
How, on God's temple, burn the unwasting fires!
Pure, soft and still, each in its own blue sphere,
As when at first the mighty Maker framed
The bending arch, and bade its gleams appear
Where the great sun had through the ether flamed.
For ever beautiful! for ever bright!
What is your hidden mystery? do ye stream
From the clear fountains of celestial light,
And each to earth display a broken gleam
Of Heaven's immortal glory? are ye strown
Along the borders of that fadeless shore,
Which lies beyond those depths unseen, unknown,
To light the course of angel-plumes, that soar
High through your rainbow-colored atmosphere?
Or are ye brilliant melodies—embodied forms
Of thrilling sound made so divinely clear—
Bright tones from lips that inspiration warms?
Or, as such perfect loveliness ye cling,
With hope and joy the spirit to inspire,
Are ye not glimpses of those chords that string,
In glittering order, Heaven's melodious lyre?

THE SEA.

On the free waters let your vision dwell;
See how they flash beneath the golden ray!
Hark, how they murmur—as their surging swell
Breaks at your feet and slowly rolls away!
Like nodding plumes and helms and glistening spears,
The scurried waves come rushing o'er the main;

Then, like a host, subdued by sudden fears,
They scatter brokenly to charge again!
Where the horizon meets the glimmering sea,
What fragile mists are floating!—Look once more!
A sail! a sail! and yet it cannot be—
'Tis but a sea-bird, that doth lightly soar;
And where yon billows, like strown diamonds, gleam,
I soon shall hear his shrill, rejoicing scream!
And can such radiant beauty ever wear
The shadow of the tempest? Will its proud
And vengeful rider, in deep midnight tear
The folded blackness of the thunder-cloud,—
Uncchain his lightnings and arouse these waves,
Which now are whispering to the peaceful deep
Or calmly resting in their hidden caves,
To leap like lions startled from their sleep?
The whirlwinds wrestle and the billows rage,
And yet God holds them in his hollow palm;
He frowneth war—in conflict they engage:—
He smileth peace—and lo! there is a calm.

CHANGE.

Change—change—the fate of each created thing!
Change, swift and constant change, the seasons bring.
Mark how they change!—upon the Summer's brow
Twine clustering wreaths of golden-crested grain,
The ripened fruit drops slowly from the bough,
Stirred by the gale that breathes along the plain.
Then bounteous Autumn yields her liberal stores,
The tired laborer to bless and cheer,
And from her lap in glad profusion pours
Her copious gifts to crown the perfect year.
Then are the leaves all tinged with vermeil dyes,
And withering fall upon the faded grass,
And o'er the azure of the changing skies
Pale fleeting mist and drifting vapor pass.
Stern Winter comes to scatter over earth
High crests of snow and jewels icy-cold;
And manhood seeks his dear, domestic hearth,
Where glow affections which are never old.
Then Spring, with all her bird-like melodies,
And rose-leaves twined 'mid her dishevelled hair,
Stirs the young foliage of the forest trees,
And with soft radiance paints the stilly air.
And there are lesser changes—Heaven is pure
To-day—no scattered mists its smiles obscure—
To-morrow comes—and one continual cloud
Throws o'er the green earth an unbroken shroud—
To-day we taste the morning's dewy breath,
To-morrow brings disease, and pain, and death—
To-day we drink the blushing cup of health,
And see its waters sparkling soft and clear;
To-morrow comes the pestilence by stealth,
Robed in thick darkness, heralded by fear!

ADVERSITY AND PROSPERITY.

The best and noblest characters, "the splendors of the firmament of time," have generally been formed by the joint influence of adversity and prosperity; as the rainbow, the most beautiful phenomenon of nature, is owing to the joint influence of sun and cloud. G.

OH! PITY THE STRANGER.

Written by a Young Lady on her return from Ireland.

Oh! pity the stranger, whoever he be,
Who wanders from home o'er the dark rolling sea;
For sad is his heart, while around you there's mirth
In each smiling face which enlivens your hearth.

As you value the blessings which smile round you now,
Oh! mock not the sadness which rests on his brow!
For how can he join in your revel and song
While his sorrowing thoughts to the absent belong?

Oh! speak no light word of reproach when he weeps,
Nor rudely disturb his repose when he sleeps—
For you know not how dear to that lone heart may be,
The dream which restores him his home o'er the sea!

I was far—far from home—and my heart was so sad,
That it scarcely remembered it ever was glad;
For lost faces of friends, and their tones of delight
Were lingering around me by day and by night.

I have trod the throng'd streets, and lonely have felt—
In the echoing temple I lowly have knelt—
And have heard in the organ's deep chanting the while
Voices calling me far from that "Ocean-girt Isle."

But my footsteps now wander the wild woods among,
Where the glad birds are pouring their early spring song,
And the faces and tones which I mourned for before,
Have welcomed me back to my own native shore!

But do I forget—ah! how can I e'er!—
That the heart of the stranger is burdened with care?
For a vow to afford such my utmost relief,
Was made when my own heart was bursting with grief!

Camden, South Carolina, 1839.

OLIVER TWIST.

Charles Dickens, *alias* Boz—the author of the Pickwick papers, *Oliver Twist*, *Nicholas Nickleby*, &c., &c., is one of the lions of modern English literature. We extract from a late number of the *London Quarterly Review* part of a racy and original critique upon *Oliver Twist*, which presents in strong language both the excellencies and defects of the author. The whole review is too long for insertion, besides containing much matter that is irrelevant.

"His works are a sign of the times; their periodical return excites more interest than that of Halley's comet. They, like good sermons, contribute to our moral health; for mirth, cakes, ale, and ginger hot in the mouth do us good; Mr. Froude's negation of negus to the contrary notwithstanding. The works of Boz come out in numbers, suited to this age of division of labor, cheap and not too long—double merits; there is just enough to make us rise from the feast, as all doctors of divinity and medicine do from dinner, with an appetite for more: in fact, Boz is the only work which the super-

print-shops—Boz furnishes subjects to playwrights and farce-writers; he is the play himself, now that brutes feed where Garrick trod; he brings home to us tragedy, comedy, and farce; the mountain comes to Mahomet, to us in our easy chairs, by our fires, and wives' sides, unpoisoned by the gas and galleries, unheadached by the music and bill of the play. Boz, like Byron, has his imitators: since the increasing demand for the *Nickleby* article, Boz, not being protected by patent, like Mackintosh, has been pirated; cuckoos lay their eggs in his nest; countless are the factory-boys which Mrs. Trollope has turned loose; even history becomes Pickwickian; Gurwood, 'cut like Romeo into small shooting stars, despatches majors and minors, Scott and lot, all aiming at the life of England's Duke, which we hope (notwithstanding he has escaped a hundred victories) is still insured. These biographers run shilling handicaps—the more subscribers the better—*nos numeri sumus*. Whatever may be the merit of these imitations, for which we are not now looking, the strength of Boz consists in his originality, in his observation of character, his humor—on which he never dwells. He leaves a good thing alone like Curacao, and does not dilute it; wit, which is not taught in Gower street, drops out of his mouth as naturally as pearls and diamonds in the fairy tale; the vein is rich, racy, sparkling, and good-natured—never savage, sarcastic, malevolent, nor misanthropic; always well placed and directed against the odious, against purse-proud insolence, and the abuse of brief authority. Boz never ridicules the poor, the humble, the ill-used; he spares to real sorrow "the bitterest insult of a scornful jest;" his sympathies are on the right side, and carry his readers with him. Though dealing with the dregs of society, he is never indecate, indecent, nor irreligious; he never approves nor countenances the gross, the immoral, or offensive; he but holds these vices up in a pillory, as a warning of the disgrace of criminal excess. Boz, like the bee, buzzes amid honey without clogging his wings; he handles pitch charmingly; the tips of the thumb and fore-finger of the picturesque senoras of Paraguay are infinitely more discolored. He tells a tale of real crushing misery, in plain, and therefore most effective language; he never then indulges in false sentimentality, or mawkish, far-fetched verbiage. Fagin, Sikes, and the dog especially, are always in their proper and natural places, always speaking, barking, and acting exactly as they ought to have done, and, as far as we are able to judge, with every appearance of truth. Boz sketches localities, particularly in London, with marvellous effect; he concentrates with the power of a camera lucida. Born with an organic bump for distinct observation of men and things, he sees with the eye and writes with the pen of an artist—we mean with artistical skill, and not as artists write. He translates nature and life. The identical landscape or occurrence, when reduced on one sheet, will interest and astonish those who had before seen with eyes that saw not, and heard with ears that heard not, on whom previously the general incident had produced no definite effect. Boz sets before us in a strong light the water-afending orphan's eye, the condemned prisoner, the iron entering into his soul. This individuality arrests—for our feelings for human suffering in the aggregate are vague, erratic, and undefined. He collects them into one burning focus; a practical oppression is perfectly understood by the mass, even by the irrational "masses," however they may be ignorant of the real causes and appropriate remedies. A general wrong, a poll-tax, will be borne without resistance, while a particular outrage shown to the daughter of Wat Tyler came home to the clenched fists of a million fathers; for private feelings pave the way to public outbreaks. Death, again, as an abstract idea is a thing for declamation. Boz gives

The circumstantiality of the murder of Nancy is more harrowing than the bulletin of fifty thousand men killed at Borodino. Bloodshed in mid-day comes home to our peaceful threshold; it shocks the order of things; it occurs amid life. Wholesale carnage, battle's own daughter, is what we expect, and is gilded with glory and victory, not visited by shame and punishment.

Boz fails whenever he attempts to write for effect; his descriptions of rural felicity and country scenery, of which he clearly knows much less than of London, where he is quite at home and wide awake, are, except when comical, over-labored and out of Nature. His "gentle and genteel folks" are unendurable; they are devoid of the grace, repose, and ease of good society; a something between Cheltenham and New York. They and their extreme propriety of ill-bred good-breeding, are (at least we hope so) altogether the misconceptions of our author's uninitiated imagination, mystified by the inanities of the kid-glove novelists. Boz is, nevertheless, never vulgar when treating on subjects which are avowedly vulgar. He deals truly with human nature, which never can degrade; he takes up every thing, good, bad, or indifferent, which he works up into a rich alluvial deposit. He is natural, and that never can be ridiculous. He is never guilty of the two common extremes of second-rate authors—the one a pretension of intimate acquaintance with the inner life of Grosvenor Square—the other an affected ignorance of the doings, and a sneering at the bad dinners of Bloomsbury—he leaves that for people to whom such dinners would be an unusual feast. We are bound to admit that Boz's young ladies are awful—Kate Nickleby is the best of them—but they are all bad enough; but we must also admit that, both in fiction and reality, these bread-and-butter budding beauties are most difficult to deal with, except we are in love with them. They are neither fish, flesh, nor fowl, and as Falstaff says of Dame Quickly, no man knows where to have them.

Boz is regius professor of slang, that expression of the mother-wit, the low humor of the lower classes, their Sanscrit, their hitherto unknown tongue, which, in the present phasis of society and politics, seems likely to become the idiom of England. Where drabs, house-breakers, and tavern-spouting patriots play the first fiddle, they can only speak the language which expresses their ideas and habits. In order fully to enjoy their force, we must know the conventional value of these symbols of ideas, although we do not understand the lingo like Boz, who has it at its fingers' ends. We are amused with the comicality, in spite of our repugnance that the decent veil over human guilt and infirmities should be withdrawn; we grieve that the deformity of nakedness should not only be exhibited to the rising generation, but rendered agreeable by the undeniable drollery; a coarse transcript would not be tolerated. This is the great objection which we feel towards *Oliver Twist*. It deals with the outcasts of humanity, who do their dirty work in work, pot, and watch-houses, to finish on the Newgate drop. Alas! for the Horatian precept, "*Virginibus puerisque canto*." The happy ignorance of innocence is disregarded. Our youth should not even suspect the possibility of such hidden depths of guilt, for their tender memories are wax to receive and marble to retain. These infamies feed the inmate evil principle, which luxuriates in the supernatural and horrid, the dread and delight of our childhood, which is never shaken off, for no man entirely outlives the nursery. We object to the familiarizing our ingenious youth with "slang;" it is based in travesty of better things. Noble and generous ideas, when expressed in low and mean terms, become ludicrous from the contrast and incongruity; "*du sublime au ridicule il n'y a qu'un pas*." But the base vehicle conveys too frequently opinions and sentiments which could thus alone gain admission. The jests and jeers of the "slangers" leave a sting behind them. They corrupt pure taste and pervert morality, for vice loses

shame when treated as a fool-born joke, and those who are not ashamed to talk of a thing will not be long ashamed to put it into practice. These Dodgers and Sikes break into our Johnsons, rob the Queen's lawful current English; they, at least, are unfettered by grammar. They speak the energetic tone of this era of popular outbreaks—*potus et ex lex*. The classics, like other dogs, have had their day. Engin, reasoning well, votes Plato a bore. Can Cicero sharpen the "Artful Dodger," or Euclid enlighten the speculative Mr. Sikes? "D— Homo!"—these "ancients," dead and buried, can't go the rail road pace of "them lifers." Boz is no reader of Aristotle—

"Laws his Pindaric parents minded not,
For Boz was tragi-comically got."

His *muthee*, or plot, is devoid of art. This, a fault in comedy, is pardonable in tragedy—where persons, not events, excite. We foresee the thunder-cloud over *Œdipus* and the master of Ravenswood without decrease of interest, which is not diminished even on reperusal, by our perfect knowledge of the catastrophe; but Boz must remember that he is not in the high tragedy line, which deals more in expression of elevated persons and thoughts, in an elevated manner, than in the mere contrast of situations and events; and make a better story next time. He should also avoid, in future, all attempts at pure pathos—on which he never ventures without reminding us of Sterne and his inferiority to that master. Let him stick to his native vein of the *serio-comic*, and blend humor with pathos. He shines in this; his fun sets off his horrors as effectually as a Frenchman's gravity in a quadrille does his levity in an *emete*, or a massacre."

We extract the following beautiful and pathetic lines from Mr. Willis's "*Jottings Down in London*." Mr. W. says, "I picked up a volume of poems at the club to-day, which I had never seen before, and here is one good thing from it."

LINES TO A SISTER DEAD.

BY JOHN KENTON.

I think of thee, my sister, in my sad and lonely hours,
And the thought of thee comes o'er me like the breath of morning flowers.

Like music that enchants the ear—like sights that bless the eye;
Like the verdure of the meadow—the azure of the sky—
Like rainbow in the evening—like blossom on the tree,
Is the thought of thee, dear Charlotte—is the tender thought of thee.

I think on thee, dear sister; I think on thee at even,
When I see the first and fairest star steal peaceful out of heaven.
I hear thy sweet and touching voice, in each soft breeze that blows,

Whether it waft red autumn-leaf, or fan the summer rose.
Mid the waste of this lone heath, by this desert, moaning sea,
I mourn for thee, my Charlotte, and shall ever mourn for thee.

ETERNITY.

At all times we have two eternities before us: the one, that of time, in our imagination; and the other, that of space, in the blue heavens, which reach above and around us, we know not where. And nightly we have the third, that of number, completing the triad, in the countless stars; themselves the gems of eternity—an eternity alike of space and time.

THE STUDENT

IN AGRIPPA'S MUSEUM.*

It was a spacious vaulted room,
And many a carving grim,
In torch-light now, and now in gloom,
Scowled fearfully on him.
In the midst a brazen table bore
A mighty volume old,
And sealed it was with five and four
Clasps of pure burnish'd gold.

Hard by a silver censer stood,
And as nearer the student came,
The smouldering fire of sandal-wood
Shot up into a flame.
And he thought as it met his eager sight,
He would open and therein look
On the hidden things, be what they might,
Of that old nine-clasp'd book.

The clasps he openeth one by one,
And little dreaming of ill,
The words uncouth to read begun,
That did the pages fill.
The incense flame, of late so clear,
Now into vapor passed,
While mingled tones of glee and fear,
Swept by upon the blast.

And as those accents rang around,
A knock comes at the door;
Yet he, it seem'd, heard not the sound,
For he read as before.
On, on, he went, when, lo! there came
A second and louder blow!—
Is it the breeze that fans the flame,
And makes it flicker so?

But, with a third and furious stroke,
The iron door now rang,—
Like one from fearful dream awoke,
To his feet the student sprang.

* "But the most extraordinary story of Agrippa is told by Delrio, and is as follows:—Agrippa had occasion one time to be absent for a few days from his residence at Louvaine. During his absence he entrusted his wife with the key of his museum, but with an earnest injunction that no one on any account should be allowed to enter. Agrippa happened at that time to have a boarder in his house, a young fellow of insatiable curiosity, who would never give over importuning his hostess, till at length he obtained from her the forbidden key. The first thing in the museum that attracted his attention was a book of spells and incantations. He spread this book upon a table, and, thinking no harm, began to read aloud. He had not long continued this occupation, when a knock was heard at the door of the chamber. The youth took no notice, but continued reading. Presently followed a second knock, which somewhat startled him. The space of a moment having elapsed, and no answer made, the door was opened, and a demon entered! "For what purpose am I called?" said the stranger sternly; "what is it you demand to have done?" The youth was seized with the greatest alarm and struck speechless. The demon advanced towards him, took him by the throat and strangled him, indignant that his presence should be thus invoked from pure thoughtlessness and

Then with a crash the door gave way,
And forth before him there,
One shrouded all in mantle gray
Stepped from the turret stair.

With angry mien and aspect fell,
('Twas a fearful sight to see,)
"I am here," he cried, "thy bidding tell—
What seekest thou with me?"
No word, no sign, the student gave—
He saw that form of ill—
And as though he had been in a dead man's grave
His very heart stood still!

"So ho! for nothing then, I learn,
Hither have I been brought—
But thou shalt find, ere I return,
I come not up for nought!"
He seized him with a deadly hold—
Ah! well I ween that none
Escape, however strong or bold,
Who meet that Evil One!

P. H. R.

THOUGHTS AND REFLECTIONS.

I.

The image of her whom he loves, in the mind of one that loves truly, is as the evening star in the pure depths of space. And like that star, though far away, her image is as bright and vivid as though she were near.

II.

There are some feelings and changes of the human heart, at whose action we cannot help being grieved; and indeed whose existence, even in ourselves, we will scarcely acknowledge; and which yet tend greatly to our happiness. Such, for instance, is the gradual diminution and final cessation of grief for friends who have died, or who by circumstances have been removed from us forever, and the sometimes almost total oblivion of them in our memory.

III.

Most of the eminent astronomers have lived to a very old age. This I suppose has been owing to the abstraction, produced by the peculiar nature of their science, from the petty cares of the world. We might almost imagine, that with the beams of the stars, which they so often gazed upon, they had imbibed a portion of their wondrous duration.

IV.

The reviewer of Crabbe's life and writings, in the Edinburgh Review, whilst speaking of his being a great reader, observes "But the reading which was constantly going on, was mostly reading for amusement. Nineteen twentieths of their principal supply of modern literature are said to have been novels." Perhaps it was a romantic tendency produced by such reading, that led him, when an old man, to imagine himself in love; for it is said that he then fell in love with several ladies, one after the other in quick succession; and these passions could hardly have been otherwise than imaginary.

V.

The expressed idea coincides but faintly with the

through the twilight heavens, to the dark and colorless mass, which they become, when night, like the car of a conqueror, has rolled over the earth. This is, owing in some measure to the imperfection of language. Some men too have a greater command over words than others, and a greater knowledge of their exact meaning and differences, and hence what are most suitable to convey an idea in the strongest possible manner. But the great cause, in all cases, which renders the expressed idea inferior in strength to the original, is, that every idea enters the mind with many beautifying, or strengthening associations, and when it is expressed, most of these must necessarily be lopped off: or in fact, they are frequently so intangible, that they cannot be expressed at all, in words. Every one who has transcribed his ideas, must feel this weakening process in a greater or less degree. But if such be the case with the multitude of writers, how great must be the difference with a Shakspeare or a Shelley. How little must the world know of their glorious imaginings.

VI.

Industry may be carried so far as to become an evil: for all amusements being forsaken, making money becomes the only one; and being thus made the sole occupation and thought of life, it becomes an idol, upon whose altar all the noble feelings of the heart, one after the other, are sacrificed.

VII.

Presentiment of evil is oftentimes nothing more than a modification of fear. When, for instance, we are entering upon any undertaking, whether of amusement or business, however great may be the pleasure that we expect from it, still we have always some fears lest we should meet with something unpleasant. The knowledge gained by experience, that we are almost always disappointed in our expectations, is in itself sufficient to damp our hopes, and mingle them with fears. And this feeling is the stronger, accordingly, as our mind is more or less tinged with sadness at the time, or as there are just grounds for some fear. If, on such occasions, we meet with no accident whatever, we think no more of our preceding feelings, or as only under their real character—but if we do meet with one, we change the name of fear into that of presentiment. In most cases, we deceive ourselves in this manner. We imagine that we had a presentiment of a thing happening; whereas there existed some cause for this expectation, of which cause we were unconscious, and therefore thought that there was none at all. This cause may have existed only to produce the expectation, and then to vanish from our memory; or, as is most commonly the case, it may still continue to exist along with it—we being unconscious of such existence. Thus a state of joy or sadness, existing just before we had fixed our thoughts upon something of whose event we were doubtful, whether it will be good or evil—accordingly as this previous or perhaps accompanying state was joy or sadness, so will our expectation, or in other words, our presentiment, be of good or evil. We may say then, generally, that presentiment is nothing more than expectation produced by some cause, of the existence of which cause in our mind, we are unconscious. This cause, of which we are unconscious, is often nothing more than the association of ideas. Thus, for instance, if we have formerly enjoyed our-

selves in any place, when going there again, we are almost sure to expect pleasure, even though perhaps that which formerly caused this pleasure, is not supposed by us to be now there; if our expectations are realized, we say that we had a presentiment of it, whereas it was only the action of the principle of association—i. e. from having once enjoyed ourselves there, we ever after associated with it the idea of pleasure.

VIII.

When we are in doubt which of two courses of conduct to pursue, the great motives being balanced, it is frequently the small ones which turn the scale. And we often act unconsciously rather from the impulse of these less motives, than from that of the greater. When, too, events occur, favorable to our happiness in several respects, frequently we rejoice rather from the expectation of the more trifling benefit, than from that of the more important—particularly, as is often the case, if the former be the more immediate. And the same thing takes place with regard to our grief at the loss of any thing that was beneficial to us in several respects.

IX.

If you wish a friend to admire a favorite volume, never praise it too highly; for he, expecting too much, will be disappointed;—or, at any rate, the desire and expectancy of being pleased, alone, by their mixture with the pleasure taken in reading it, will diminish its intensity by the complexity produced. We often desire a person to like a book, as much as if this were a great acquisition to ourselves. However it is sometimes: for a mutually admired book has a great tendency to cement friendship.

X.

They who have religion, must necessarily be more happy at all times than those who have it not. For in the midst of pain and affliction, their faith will lift their minds unto the joys of Heaven—joys in which they feel that they must soon participate—and in this contemplation their immediate earthly troubles are forgotten: as the eagle, surmounting the clouds that hang loweringly over the earth, floats far above in the sunny and unclouded heavens.

XI.

Judging from past history, fanaticism appears to form an essential trait in the New England character. It was this spirit, which, in the reign of Charles I, plundered and despoiled the churches, and which, finally, beheaded him. After the Puritans had emigrated to America, it was owing to this same spirit, that they were persecuted who differed from them in religious matters, and that the old women were burnt as witches. It must have some channel of discharge, and this it has at the present time found in abolitionism.

XII.

Obscurity in writers is, I have no doubt, often owing to the want of some associated idea. An author, in thinking of a subject many times, upon which he is about to write, views two ideas so often together, that he at last involuntarily regards them as inseparably connected. And in expressing a thought of which both of these ideas form a part, he puts down only one of them, unconsciously taking it for granted, that his readers also associate them invariably together.

THE SILENT TEAR.

Ah! lady, say, when I am nigh,
Why always sad—why always sigh?
'Tis ever thus when I am near—
I'm doom'd to mark the silent tear.

There was a time, when thou wouldst smile,
My weary moments to beguile—
And chide me, if I was not near,
With many a sad and silent tear.

Thou weepest now, if I but twine
Thy small, white, trembling hand in mine;
And tho' I smile and still am near,
I only mark the silent tear.

There was a time, when thou wouldst prove,
By every languishment, thy love,
And grasp my hand, when I was near,
To wipe away thy silent tear.

Ah! well I know the secret grief—
But, oh! I cannot yield relief;
Mine is the same—the grief of years—
Witness, alas! my silent tears.

MILFORD BARD.

THE "KNICKERBOCKER," AND THE "GENTLEMAN'S MAGAZINE."

We desire to notice more frequently than we do, some of the magazines of our country, distinguished for literary excellence. In future we are resolved to do it, even to the exclusion of other matter. If our instrumentality can recommend them to southern patronage, we shall lend it with pleasure. We are all laboring in the same cause, and if we can help each other, it is our duty to do so. In Virginia, to say nothing of other southern states, there are many country gentlemen of wealth and education, who, by subscribing for a dozen, or even half a dozen periodicals, might diffuse in their neighborhoods a taste for the delightful recreations of literature, and that taste, if excited, would supplant the relish for gross pleasures. How few of our families are reading ones, in the strict sense of the term! Besides the newspaper, the Farmers' Register, the Sporting Magazine, and the year's almanac, a few trashy novels, constitute, it is feared, the major part of the libraries of our otherwise social, agreeable and hospitable country houses. If our squires won't read themselves, why don't they provide solid and substantial nutriment for their wives, sons and daughters? We insist upon it, that they cannot spend their surplus cash better. Here, for example, is the *Knickerbocker* of New York; we have before us the August number, and a very pleasant, instructive, and delightful one it is. The letter on the "London theatres," from the author of an "American in Paris," is absolutely worth, to a man of true taste, a whole year's *Knickerbocker* subscription. Not Washington Irving himself, nor "Boz," nor Willis, nor any of the host of periodical writers, ever delighted us more. We wish our readers could share the pleasure we experienced in reading that one article. The *Knickerbocker*, by the way, is not only freighted in its monthly voyages by the rich adventures of "Geoffrey Crayon"—but another great name will be shortly added to the list of its contributors. Charles Dickens, the intimitable "Boz," the author of *Pickwick*, *Oliver Twist*, &c. &c., is about to adorn its pages with his truly original and fertile mind. His thoughts will appear on this side of the Atlantic, in their fresh and virgin state. We are all tiptoe to see how he will first address an American audience.

Here too, on our table, is "*Burton's Gentleman's Magazine*," for September, and a very gentlemanly magazine it is. If our

readers have never seen Burton on the stage, they have been deprived of a rare pleasure, and his recent great success on the New York boards, has given him a new claim to the rank of the very first of American comedians. How truly praiseworthy is it in Burton, in the midst of histrionic fame and popularity, not to forget that he is also a useful and effective member of the republic of letters. He is not only a fine actor, but an admirable writer; as a critic, he cuts with one of the keenest edged knives we have ever seen, and woe be unto the luckless wight who is obliged to submit to his operations. They are absolutely withering, as one or two specimens in the September number will abundantly testify. We are pleased to find that our old assistant, Edgar A. Poe, is connected with Burton in the editorial management of the "*Gentleman's Magazine*." Mr. Poe, is favorably known to the readers of the *Messenger*, as a gentleman of fine endowments; possessing a taste classical and refined; an imagination affluent and splendid, and withal, a singular capacity for minute and mathematical detail. We always predicted that Mr. Poe would reach a high grade in American literature, but we also thought and still think, that he is too much attached to the gloomy German mysticism, to be a useful and effective writer, without a total divorce from that sombre school. Take for example, the tale of "the Fall of the House of Usher," in the September number of the *Magazine*, which is understood to be the production of his pen. It is written with great power, but leaves on the mind a painful and horrible impression, without any redeeming admonition to the heart. It resembles a finely sculptured statue, beautiful to the eye, but without an immortal spirit. We wish Mr. Poe would stick to the department of criticism; there, he is an able professor, and he uses up the vermin who are continually crawling, unbidden, into the literary arena, with the skill and nonchalance of a practised surgeon. He cuts them up by piece-meal, and rids the republic of letters, of such nuisances, just as a good officer of police sentences to their proper destination, the night-strollers and vagabonds who infest our cities. We sincerely wish Mr. Poe well, and hope that he will take our advice in good part. The September number of the *Magazine*, is embellished by a fine portrait of Richard Penn Smith, a respectable American dramatist and poet. Besides various other interesting pieces, it contains an excellent article on Gymnastics, understood also, to be from the pen of Mr. Poe.

THE SUNBEAM.

I flit o'er the ocean—'tis shrouded in light;
I smile on the landscape—'tis verdant and bright:
I touch the blue heavens with saffron and gold,
And the bright hues of Iris resplendent unfold.

The blush of the rose is awoke by my gaze;
I whisper,—young zephyr obedient plays:
All beings of beauty, o'er streamlet and dell,
Are called into life by the power of my spell.

The sparkling of fountains—the glow of the rill—
The shadows that rest on the breast of the hill—
The gay wreaths of light, that the wild billows ride,
All owe to my magic their glory and pride.

I peer through the casement, and scatter the gloom
That broods o'er the captive, and lighten his doom:
O dearest of triumphs that flows from my art,
To banish one pang from the sufferer's heart.

And thus, 'mid the tempests and storms that arise,
A rainbow of hope will I spread in the skies—
And on hearts, or o'er landscape, wherever I stray,
A joy and a glory shall follow my way.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—THOMAS W. WHITE, EDITOR AND PROPRIETOR.

VOL. V.

RICHMOND, NOVEMBER, 1839.

No. XI.

THE BELEAGUERED CITY.

BY PROF. H. W. LONGFELLOW.

I have read in some old, wondrous tale,
Some legend strange and vague,
That a midnight host of spectres pale
Beleaguer'd the walls of Prague.

Beside the Moldau's rushing stream,
With the wan moon overhead,
There stood, as in an awful dream,
The army of the dead.

White as a sea-fog, landward bound,
The spectral camp was seen,
And with a sorrowful, deep sound,
The river flow'd between.

No other voice nor sound was there,
No drum, nor sentry's pace;
The mist-like banners clasp'd the air,
As clouds with clouds embrace.

But when the old cathedral bell
Proclaim'd the morning prayer,
The white pavillions rose and fell
On the alarmed air!

Down the broad valley, fast and far,
The troubled army fled:
Uprose the glorious morning star,—
The ghastly host was dead!

I have read in the wondrous heart of man,
That strange and mystic scroll,
That an army of phantoms, vast and wan,
Beleaguer the human soul.

Encamp'd beside life's rushing stream,
In fancy's misty light,
Gigantic shapes and shadows gleam
Portentous through the night.

Upon its midnight battle-ground
The spectral camp is seen,
And with a sorrowful, deep sound,
Flows the river of life between.

No other voice nor sound is there
In the army of the grave—
No other challenge breaks the air,
But the rushing of life's wave.

But when the solemn and deep church bell
Entreats the soul to pray,
The midnight phantoms feel the spell—
The shadows sweep away.

Down the broad vale of years afar,
The spectral camp has fled;
Faith shineth as a morning star—
Our ghastly fears are dead.

VOL. V.—90

ISLAND OF CANDIA.*

The Island of Candia, the ancient Crete, is one of the most interesting regions, from its historical associations, which modern travellers can visit; and it is not less worthy of examination from its geographical position, its natural features, and from the influence, which, under happier auspices, it might exert upon the various countries that surround it. It is the largest of the islands of the Mediterranean, and yields to none of them in the fertility of its soil and the beauty of its climate. It is, indeed, pressed down by an iron government—that of Mehemet Ali; but it is to be hoped that this will either cease ere long, and allow the union of the island to the dominions of King Otho, or that such changes will be gradually introduced, as will be more conformable to the spirit of the age and the condition of the people. Accident led us to this island a short time since, but our personal observation was so limited, that we have little to tell, and no *hair-breadth escapes* to narrate to the reader. We were, however, successful enough to collect some valuable statistical information, concerning its condition and productions, from authentic sources, and we propose to communicate the results of our remarks, regretting, however, that circumstances will necessarily render these meagre and imperfect.

A slight inspection of the map of the Mediterranean, will show the advantageous position of this valuable island. It stretches from Greece to Egypt, actually barring the approach to the Archipelago and the Levant, and to the immense and fertile regions, which seek their outlets through them. When it is recollected that these embrace almost all the Turkish possessions, the provinces subjugated by the Pasha of Egypt, the greater part of the new kingdom of Greece, and no inconsiderable portion of the Russian dominions, we shall be ready to agree, that Aristotle had just grounds for the opinion he advanced, that few situations were more favorable for the foundation of a great empire. It touches the Adriatic Sea on one side, and the Nile on the other—thus forming the door, which can open or shut the maritime intercourse between important portions of Europe, Asia and Africa, and the rest of the world. France particularly has not been indifferent to

* In the October number of the Messenger, we promised to present our readers with an original article from the vigorous and classical pen of Mr. Cass, the present American Minister at Paris, and we take sincere pleasure in now redeeming that promise. An historical, geographical, and statistical account of so important an island as Candia, or the ancient Crete, derived principally from the personal observation and research of a gentleman so well known in the republic of letters, as well as in political life, cannot fail to be deeply interesting to our readers. To express all the pleasure with which this able contribution to the Messenger has inspired ourselves, might, perhaps, somewhat invade the prerogative of others. We are, therefore, content earnestly to recommend its careful perusal, and to tender to Governor Cass our best thanks for the favor by which we have been distinguished.—[Editor Southern Literary Messenger.]

sion, entrusted to General Dumas, under the reign of Louis XVI. In the autobiography of that respectable man, interesting particularly to an American, from his personal participation, under Rochambeau, in the war of our revolution, is a curious narrative of his voyage to Crete, and a full account of the views of the French government in relation to the possession of the island. General Dumas examined the whole country minutely, and presented, on his return, an able report exhibiting all the facts necessary for the action of the ministry. But the elements of a great political change were then in operation in France, and a storm was gathering, which soon burst upon that country and upon Europe with a frightful violence, little favorable in its commencement to the realization of projects of distant aggrandizement. But the advantages of the island are too obvious to escape the statesmen of the present day; and Mr. Lamartine has very recently proposed at the French tribune—in a speech, not less remarkable for its apparent contempt of national faith and established rights, than from the consideration that it proceeded from an eminent author, whose writings abound with declamatory passages upon religion and morality—to take possession of Crete and to hold it as a permanent military station. He has been much less happy in demonstrating the justice of his project, than in exhibiting the value of the possession which he covets for his country. And in one of the latest works upon the East, which has issued from the English press, containing an account of Candia, the travels of captain Scott of the staff corps of the British army, there is a labored memoir, pointing out its value to Great Britain, and endeavoring to show that it is useless to the Pasha of Egypt, and that he would willingly cede it as the price of the recognition of the hereditary right of his family to his other territories.

When the reader recalls to his memory that Crete was the native country of the Titans, and of Saturn, of Jupiter, of Vesta, of Ceres, of Juno, of Neptune, of Pluto—all the latter occupying the most distinguished places in heathen mythology—of Minos, of Rhadamanthus, of Deucalion, and of Idomeneus; that in it were Mount Ida and the Labyrinth; that it was governed by the institutions of Minos, established originally by that lawgiver for its benefit; that it was celebrated for its hundred cities before the war of Troy; and that it sent to the memorable siege of that place eighty vessels, under its king Idomeneus, as we are told by the father of the Epopea—

“Crete's hundred cities pour forth all her sons.
These marched, Idomeneus, beneath thy care
And Merion dreadful as the god of war:”

When all this is brought before us, it is easy to comprehend that a very early state of civilization, and perhaps the occurrence of some extraordinary event, must have given great interest to this classic land in the fabulous and traditional periods of the world,—an interest, which the subsequent course of its history kept alive, and which has descended to our times as a tribute, that the present always owes to the glory and decadence of the past.

island exhibits to the observer. One of the earliest of civilization, remarkable in the earliest periods of the world for its contributions to the heathen mythology, to the systems of education and of legislation, and to many of the arts which minister to human comfort, it is not less remarkable for its political phases. It has been at times independent and subjugated, a monarchy, a republic, and a province. As a monarchy, it was governed by Minos, who is called by Hesiod the greatest of mortal kings. As a republic, it furnishes two lessons for the contemplation of all who are interested in the study of human nature. It never undertook an external offensive war—and its duration, which extended to one thousand years, exceeds that of any other republican government upon record. Happy will our country be, if in following this example, we shall be able to equal the Cretan republic in moderation, and to exceed it in longevity. From an independent nation, it has passed successively under the domination of the Romans, the Arabs, the Greeks, the Latins, the Venitians, the Turks, and last, of the Egyptians. Once the missionary field of St. Paul and the Bishopric of Titus, it is now divided between the Moslem faith and a degraded branch of the Greek church; and the only sign of vital religion it exhibits, is to be found among a little band of generous and devoted persons, who have brought back from the western continent, to this early seat of apostolic labor, the human means of reestablishing the primitive purity of the church, and who, with a few faithful disciples, have fixed their abode in a corner of the island, amid ignorance, fanaticism and ruin.

The slight allusion we have made to the early condition of this island, sufficiently evinces, that it is one of the regions to which a branch of the human family directed the course of its emigration, not long after the separation from the parent stock in the central portions of Asia. The origin, early progress of settlement, and increase of nations, precede the period of authentic history, and are lost in the darkness of that remote epoch. It is to be regretted, indeed, that the infancy of nations has passed under circumstances which have left us no authentic memorials of the most interesting portion of human history. It is difficult to conceive a more curious subject of observation and inquiry, than the first efforts of man to examine the world around him; to accommodate himself to the circumstances of his position; to learn how to provide for his animal wants; to proceed step by step from one result of his experience to another, till he attains a knowledge of his true condition and a sentiment of his real power, and to place himself at the head of that creation which he is destined to embellish and to govern. But it is useless to speculate upon these topics; the necessary facts have forever escaped us. Writers are, indeed, anxious to discover, in the mythological fables and in the gross traditional tales which have come down to us, a shadowing out of the events that actually passed at that remote period; and many a long day has been laboriously and uselessly devoted to these investigations, uncertain in their process and profitless in their result. Unfortunately, we are often

so eager to find remote causes, that we overlook those which are more natural and obvious; and in all these investigations, nothing is allowed for the waywardness of the human intellect and the fantasies of the human imagination. The prototypes, therefore, of these legendary monsters, we are determined to seek in nature, rather than in that creative intellectual power, which is never more fertile than in those periods when it is the least regulated by study and knowledge.

The fabulous and traditional history of Crete abounds with illustrations of the preceding remarks. We need not recall them to the reader, because they cannot fail to be suggested by the simple enunciation of the names of the personages we have given, and whose renown occupies so large a space in the poetry and annals of the earlier ages. We pass over, therefore, the race and deeds of the Titans, and the celestial dynasty, descended from Saturn the eldest of them; the reign of Minos and the life of Rhadamanthus, who were so distinguished for their justice, that they were called to preside over the tribunals in the infernal regions; of the exploits of Theseus and the death of the Minotaur; and of the other marvellous incidents with which this period abounds, and pause a moment to survey the condition of the island when authentic history first makes it known to us.

It had then exchanged its monarchical for a republican government. Its executive, composed of ten magistrates, elected annually, performed similar functions to those of the Ephori at Sparta, and probably formed the model of the constitution of the latter. A council of twenty-eight senators, named for life, was a check upon the executive authority; but it is difficult to trace the respective limits of their power, or to ascertain how far a wise jealousy might be carried, before it degenerated into one of those political contests before which human freedom has so often fallen. Its duration of ten centuries is a shining proof of the wisdom of its practical operation; and antiquity vaunts the enlightened men and virtuous citizens it formed. It was praised by Plato and Strabo and copied by Lysurgus; it could have no higher eulogies. The notices which have come to us of its history and condition during this period are few and imperfect. It is evident, however, that the constitution of the island did not prevent internal dissensions; and different cities fought for superiority, with all those incidents attending their alternate ascendancy and subjugation, which mark the history of the Grecian republics, continental and insular. To him, who seeks the causes of the decline and fall of these little interesting states, nothing can appear more contemptible than their differences, perpetually succeeding one another, nor more insensate than the course of the governments and people, forever sacrificing their peace to the childish passions of the moment, and thus preparing the way for the memorable fate which overtook them. In all history there is no chapter more interesting to the friends of equal governments, than that which describes the jealousy and dissensions of the Grecian people—nor any lesson more instructive than is exhibited by their consequences. They displayed so many bright spots during their passage over the horizon, that their memory will never fail to attract the admiration of mankind. But they set in a dark and troubled night.

The Cretan archers and slingers were celebrated

among the ancient warlike nations, and they rendered essential services in the retreat of the ten thousand, and swelled the army of Alexander in its triumphal progress through Asia. The secret springs of the Cretan policy are unknown, and we cannot, therefore, determine what motives induced the people to join the Persians against the Greeks. But the part they took for Mithridates, brought them into contact with the Romans, then on their way to universal conquest, and furnished the cause or the pretext for their subjugation. War was declared against them, and Mark Anthony, the father of the Triumvir, attacked them, but was defeated, and a great part of his fleet taken. Rome could pardon a conquered people, but never a victorious one; and Metellus was sent to repair the disaster and to vindicate the honor of the Roman arms. He debarked upon the island without opposition; but the Cretans soon collected their forces and maintained a vigorous resistance with varied success for three years, diversified by a species of civil war among the invaders, in which a portion of their troops under Octavius joined the islanders. However, after the loss of a large portion of the inhabitants, and the destruction of several cities, the country was at length subdued and added to the list of subjugated nations.

It then became a Roman province, and its fate for ages was bound up with that of the great metropolis. In the division of the empire, it fell to the lot of the eastern Emperors, and seems to have been comparatively flourishing, till it was almost ruined by a remarkable earthquake in the reign of Valentinian I.

In 803 it became connected with the Spanish Saracens, whose romantic adventures furnish such an interesting episode in the history of the various kingdoms now composing the Spanish monarchy. One of those family disputes, which so often marked the progress of these Moorish adventurers, had broken out; and the unsuccessful party dreading the vengeance of their rivals, and determined not to submit to their authority, embarked under their leader and sailed over the Mediterranean rather as pirates than as legitimate warriors. Attracted by the riches of Crete, they landed upon the island, but too feeble to conquer it, they ravaged the coasts, and safely retired with their plunder. But, tempted by the wealth of the country and its weakness, they returned the next year with a more formidable armament, and landed their armed colony. They made an incursion into the interior, and when they returned to the shore, they found their fleet in flames, and comprehended, that they had before them either a conquest or a tomb. Their leader frankly avowed, that this bold measure was his own, and replied to their remonstrances, that he had brought them to a land flowing with milk and honey, to their true country, where they would find wives to recompense them for those they had left. The conqueror of Mexico, when he burnt his fleet and showed his soldiers that they had to choose between the enemy and the sea, had perhaps read this lesson in the history of the roving bands which his own country had sent forth. There are times when the rashest measures are the wisest, and it is the province of true genius to appreciate the circumstances, and to seize the favorable moment for decisive action, taking care to distinguish between the difficult and the impossible.

The Moslem leader reaped the reward of his bold enterprise. He defeated the armies which the Greek emperor, Michael, the stammerer, sent against him, and in less than three years established his domination over the island. He died some years later, and left to his successors a throne, the fruit of his wisdom and enterprise. The Saracens continued in possession of Crete about one hundred and thirty-eight years, when their power was utterly broken, and the country restored to the Greek empire. This union continued till 1204, when the western Europeans having conquered Constantinople, the gratitude or the policy of Baldwin, elected emperor, induced him to cede the island to the Marquis of Montferrat, one of the leaders who had aided in elevating him to his new dignity. The new possessor, however, wanting gold more than territory, sold his kingdom the same year to the republic of Venice, the merchant kings, who wielded equally the sword and the purse, ever ready to acquire from weakness or improvidence.

During four centuries and a half the Venitians retained possession of Candia, and marked their government by a wise and vigorous course of administration. They repelled the efforts of the Genoese and of the Turks to wrest it from them, and improved the condition of the inhabitants. Commerce was extended, the cities repaired, and traces of the prosperity of the country, at this period, have yet survived Turkish and Egyptian domination.

The power, wealth, and enterprise of the small republics of Italy, during the middle ages, furnish a fertile subject for contemplation. Their history places in prominent relief the advantages of freedom and of commercial industry; and Venice and Genoa, particularly, have left many monuments of their successful progress from the Adriatic to the sea of Asoph.

But a power had now arisen in the east, destined to alarm the western nations; and the lion of St. Mark was called upon to defend, by strenuous efforts, one of the most precious jewels in his ducal crown. In 1645 the Turks attacked the island, and landing with a formidable army, laid siege to the city of Candia. After a vigorous resistance this important place was taken, and the invaders extended their conquests in different directions. They had subjugated nearly half the island, when their progress was arrested by some of the bloody revolutions in the seraglio, which have so often stained the course of Turkish history. As the Moslem efforts relaxed, those of the Venitians were redoubled, and their fleets rode triumphant upon the Levant, and actually took possession of the island of Tenedos, which commands the entrance of the Dardanelles. But the fanaticism and perseverance of the Turkish character were never more strikingly displayed than in the progress of this long contest. They succeeded in retaining their hold in Candia, and though the siege of its capital was interrupted, and offensive operations suspended, still the Venitians could not expel them. The latter, tired with this bitter and expensive war, proposed, through the mediation of the French ambassador at Constantinople, to divide the island between themselves and their enemies; but the offer was indignantly rejected, and under such circumstances, that Louis XIV, wounded in his pride, broke with the Turks and joined himself to the Venitians. The

succors he furnished, though they delayed the final result, yet could not change it.

The Grand Vizier Kiuperli, one of the most celebrated warriors known in the Ottoman annals, was then at the helm of the Turkish government, and after repairing the disasters of his fleet, retook from the Venitians their late conquests, and pushed his operations in Candia. The city of Candia had already been invested during some years, when the Grand Vizier himself, in 1667, after the most formidable preparations, debarked upon the island, with large reinforcements and an immense supply of all the *materiel* of war necessary to the most vigorous prosecution of the siege.

Then commenced that death-struggle, for the possession of this important place, which arrested the attention of Europe, and which gave place to a series of the most romantic adventures in the whole history of human daring. The siege itself was the longest upon record. It continued uninterruptedly ten years. Tradition, indeed, has given to Troy a similar contest of equal duration. But there is little versimilitude in the general *contour* of the facts of the Trojan war; and imagination, rather than authentic history, has probably supplied us with the course of its operations. The conduct of the Greeks is utterly irreconcilable with the rudest principles of the art of war. Professing to attack a fortified city at some distance from the coast, they sit down upon the shore, and occasionally advance into the plain to meet the Trojans in the open field, or depart upon distant expeditions for the collection of prisoners and plunder. There were no lines of circumvallation, nor the slightest attempt to invest the city during almost the whole of the war. We looked carefully over the plain of the Troad, and whatever place may be selected for the site of the lost city, it is not the less obvious, that the hostile parties kept themselves at a respectable distance from each other, and that the country was as open to the Trojans as the sea to the Greeks. The theatre of operations was a level plain, enclosed between the ridges of Ida, the Archipelago, and the Hellespont, having in its front the small island of Tenedos. It required a more vigorous imagination than has fallen to our lot, to recognise in either of the little marshy streams which wind their way through it, the rivers so magniloquently described in the *Iliad*, and with epithets not inapplicable to our own Ohio and Mississippi. Indeed, the prestige of the plain and its associations was almost destroyed by our first access to the shore. At a little distance from the place of landing, upon a rising ground, we perceived a Turkish village—approached it, as well to gratify our curiosity, as to procure information. When almost upon the point of entering, a number of persons made violent gesticulations, which we could not understand; but on the arrival of our interpreter, who had fallen in the rear, we found the plague was raging there, and that the object of this friendly warning was to prevent our entrance. It was the fourth of July, when we roamed over this celebrated plain, recalling, at the same time, the birth of one of the youngest nations, and the death of one of the oldest.

But we must follow the struggles of the contending parties, under the beleaguered walls of Candia. The natural position of the city was strong, and its fortifications had been carefully improved, till it had become

one of the most powerful fortresses of the age, and it was defended by able and zealous officers, and by ten thousand men. And well it needed these advantages, for the Grand Vizier was a renowned warrior, and had invested the place with an army of eighty thousand men, and he had at his command the resources of a mighty empire. During more than two years the operations were carried on without intermission, and all the arts of attack and defence were mutually exhausted. Human life is nothing in a Moslem army; and the Turkish general sacrificed his soldiers without scruple, satisfied if he shed christian blood, and regardless at what expense. The fortifications were battered in breach and levelled; mines were exploded; trenches filled up, and assaults attempted. But christian fortitude still held out against Mahomedan fanaticism. The injuries were repaired as fast as made; and the most desperate attempts at escalade, led on by the Grand Vizier in person, were successfully met and repelled. The Pope was at length roused from inactivity or indifference, and began to regard with anxiety the prospect of the fall of one of the bulwarks of christendom before the Mahometan power. A crusade was preached—but alas! the times had changed, since Peter the Hermit excited the enthusiasm of Europe, and led the western nations to a long and terrible contest, as irrational in its objects, as it was fruitless in its results. However, many of the ardent youth of Europe, led away by a generous sympathy, embarked for Candia, and joined the Venitian forces; thus supplying, from time to time, the loss occasioned by disease and the sword. It was a period of peace, and many, who were desirous of military renown, coveted the glory of being taught in such a school. The engineers particularly sought this distinction,—and Vauban, among others, carried there the tribute of his experience.

Notwithstanding the generous ardor thus displayed, and the pertinacity of the defence, the Turks pressed on, and in the spring of 1669, after a series of desperate actions, succeeded in gaining possession of one of the principal outworks and reducing the fortifications almost to a heap of ruins. Candia approached its fall, when suddenly a French fleet, carrying seven thousand men, arrived to the aid of the defenders. They landed on the very eve of an intended final assault; but their presence dispirited the Turks, and the contemplated effort was abandoned. The French, however, could not consent to defend the city behind its ramparts. They immediately made a sortie, with all the ardor of their nation, and with all the enthusiasm inspired by the nature of the war in which they found themselves engaged. Their attack was so desperate and unexpected, that the Turkish army was thrown into immediate disorder and suffered a heavy loss. Had the assailants then retired, and coolly undertaken the defence of the place, the respect taught by this vigorous effort, and by the reinforcement itself, would probably have paralyzed the operations of the enemy, and might have led to the relief of the city. But the morning light disclosed the small number of the christians, and at the moment when these were upon the point of carrying the Ottoman entrenchments, a powder magazine belonging to the Turks blew up, and the French, fearing the whole ground was mined, retired in disorder,

leaving a large number dead upon the field, among whom was their general, the Duke of Beaufort.

This disaster sealed the fate of the unfortunate city, and with it the domination of the Venitians over the island. Disunion soon sprung up among the discordant materials composing the defence, and one after another, the volunteers, abandoned a task which appeared hopeless, and retired as they could to their respective countries. The Turks, concentrating their energy, and encouraged by these circumstances, made a vigorous assault, which ended in putting them in possession of one of the principal defences, and in opening to them a passage in the heart of the city. It was determined, therefore, to surrender; and a capitulation was entered into, which was followed by the withdrawal of the Venitians, and the establishment of the Turkish power over the island.

Since that period it has had its full share in the miseries entailed upon all the christian people subjected to the Mahometan yoke. The disasters, occasioned by this long contest, have never been repaired, and never will be, till the government of the island is in other hands.

It was divided into three Pashalika, and subjected to three rapacious despots. In consequence of some internal dissensions between them, a band of the native mountaineers obtained permission to govern themselves. But this concession not being regarded with fidelity, frequent contests were the result, till in 1821, the Candioties joined the other Greeks in their attempt to shake off the Turkish yoke. Not being able to subdue them, the Sultan ceded the island to Mehemet Ali, who soon obtained possession of it, and it yet forms an integral part of his dominions.

It was the 29th July, 1837, that emerging from the beautiful group of the Cyclades, we approached the ancient kingdom of Minos. We had run down from Constantinople with a favoring breeze and delightful weather, and had passed the various isles and islets which "crown" this glorious "deep," and which have been the theatres of events that will forever render them celebrated in the annals of mankind. All of them are small specks, hardly distinguishable upon the map of the world, and some of them are mere rocks; but there is a deathless interest attached to them, which time cannot annihilate, and which will survive all the revolutions, social or political, they are destined to undergo. This sentiment is a generous tribute to the dignity of human nature. It is not wealth, nor power, nor numbers, which impose upon the imagination. It is none of these, nor the memory of these, which bring the trans-atlantic pilgrim, from the bustle and business and enterprise of a new world, to contemplate these scenes of former civilization and of present decay. No! he renders his homage to a nobler idol—to the memory of genius, industry, advancement in civilization, progress in the arts and sciences, and the cultivation of whatever can best promote the interests of human nature.

We had passed by Lemnos, Tenedos, Mitylene, the ancient Lesbos, Scio, Delos, Syra or Syros, Paros, and the various other islands, which deck these seas, and whose names and history are familiar to the reader; and we had stopped at several of them to examine their condition and to run over their interesting remains.

The compression, if we may so speak, of scenes and events, within a narrow compass, and the powerful emotions which this short voyage is calculated to excite, may be appreciated by this striking fact, that at one point of our passage, we had in view at the same moment, Syra, Tinos, Andros, Delos, Mycone, Naxos, Paros, Antiparos, Siphanto and Serpho. We had passed in the distance the island of Patmos, the residence of St. John, and, if not the scene of the revelations made to him, the place where he wrote the Apocalypse which recorded them.

Our own internal seas present masses of water as large and some of them larger, than this "Egean deep," and abound with picturesque objects, almost unrivalled in the world. The entrance into Lake Superior, with the shores embosomed in woods, the high lands gradually opening and receding on each side, and the water, as clear as crystal, extending beyond the reach of the eye, forms one of the most striking displays of natural beauties it has ever fallen to our lot to witness. And a scene, almost equally impressive, though of a different character, attends the traveller who crosses the small arm of Lake Huron, between the island of Michilimackinac and the entrance of the straits of St. Marie, which communicate with Lake Superior. One bright summer morning we found ourselves making this passage, and as the sun displayed his disk above the water which surrounded us, we were surprised by a singularly interesting spectacle. We were accompanied by a fleet of three hundred Indian canoes, which had left Michilimackinac in the night, in order to make the passage, before the wind—which strengthens as the day advances—should render the voyage dangerous, for the frail birch vessels in which they navigate the rivers and lakes, that furnish them with so much of their subsistence. These Indians had made their usual annual visit to Michilimackinac, to sell their peltries and procure supplies of ammunition and clothing, and to talk over their public affairs with the representative of the government stationed there; at that time Mr. Schoolcraft, to whose worth as a citizen, and to whose exemplary conduct as a public officer, we are happy to have this opportunity of bearing testimony. They were returning in high spirits, having with them all their families, as is the usual custom of the Indians in these excursions, and having also a supply of the articles most necessary to enable them to contend with the hardships incident to their mode of life. The lake was perfectly smooth, the Indians animated, paddling with their utmost energy, and singing their various songs, with a strength of lungs which sent these far over the water. The whole display was full of life, and we recall it with the most pleasant emotions. But these scenes upon our Indian border, whether still or animated, are feeble in their effects upon the human mind, when compared with the impressions produced in the theatre where we were now moving. Distance, however, no where lends *enchantment to the view* more than here. But the nakedness of reality comes painfully to destroy some of these delusions on a near approach. All these islands are destitute of timber, naked as a vast prairie, but without one other point of resemblance. They are generally rocky, broken by ravines, and to the eye nothing can appear more sterile. The mode of culture, when

they are cultivated, is slovenly, the inhabitants indolent, the houses mean and dirty, and the towns and villages in a state of decay, and yet we visit them with the deepest interest. We visit them for what they have been, and in spite of what they are.

One of the most renowned is the little islet of Delos, or rather the two morsels of rock and earth known under that name, but separated by a narrow channel, furnishes the most striking illustration of these remarks, and the most complete picture of desolation, which even these regions exhibit. In our lonely walk amid its ruins, we did not meet a single human being. What a contrast between this almost frightful solitude and its former condition, when it was filled by busy crowds which inhabited it, or which continually flocked to it to worship at its temples, as the Jews went up to Jerusalem to render their devotions to the living God!

The sanctity of this chosen spot, is one of the facts best known in the history of ancient manners. It was the birth place of Apollo and Diana, and its three famous temples were dedicated respectively to the brother and sister and to their mother Latona. Their ruins yet attest the extent and splendor of these edifices; to the construction and embellishment of which the various states of Greece contributed with a generous spirit of rivalry, evincing the liberality of their disposition and the ardor of their religious faith. This island was holy ground, a place of refuge, where even enemies were friends when they met upon it. Livy relates an interesting anecdote upon this subject. A commission of Roman deputies going to Syria and Egypt were compelled to stop at Delos, where they found a number of galleys belonging to the kings of Macedonia and Pergamos at anchor, although these two princes were then at war. The historian adds, that the Romans, Macedonians, and Pergamians, met and conversed in the temple, as though they had been friends. The sanctity of the place suspended all hostilities.

In like manner, when the victorious Persian squadrons swept the Grecian seas, and landed detachments, which ravaged the other islands, the commander spared Delos, and even reproached the inhabitants for having quitted it upon his approach, adding, "Why have you quitted your dwellings, and thus marked the bad opinion you have of me? I am not your enemy by choice—and besides I am ordered by my king not to commit hostilities in a country, where two divinities were born, and to use no violence towards those who inhabit it. Return then, and resume possession of your houses and lands!"

And in this island, thus venerated, we saw, not the marbles actually in the process of being burnt into lime, but the pits where the lime had been made, and where, perhaps, some of the most beautiful works of antiquity had been prepared to form the mortar for a miserable cottage. It is said, that heretofore the inhabitants of Mycone rented this island from the Turkish government at the annual price of ten crowns! Such a picture admits no other trait.

As the last island of the Egean group sunk in the horizon, Crete rose before us, extending east and west, and presenting its diversified shores to our view. The aspect was rugged, and the coast precipitous and iron-bound, while in the interior arose a range of mountains, upon whose summits the clouds were resting. We

steered for the bay of Suda, and entered it without accident, mooring our noble frigate in its quiet waters.

This bay is one of the most magnificent ports in the world, stretching inland about six miles, with a breadth of three, capacious enough to contain the most powerful navy, and with sufficient depth of water for any vessel that floats. Its entrance is narrow, and divided by two small islands, on one of which is a little fortress, completely commanding the approach. We were told that the commanding officer was a *bon-vivant*, who loved wine better than the Koran; and that the captain of one of our armed vessels, who was desirous of entering the harbor, but who was prevented by the new quarantine regulations, which Mehemet Ali has recently adopted, found his way to the Egyptian's heart through a bottle of champagne, who, disregarding the fear of the plague and the fear of the Pasha, dispensed with the sanitary precautions and admitted his new friend to *pratique* without hesitation. Whatever opinion may be entertained respecting the progress of the Turks in the manners of the western Europeans in other respects, there is none in this, that the higher classes are fast acquiring the habit of drinking wine, and some of them a much stronger liquid. The *penchant* of the late Sultan for this indulgence, was well known through the empire, and could not fail to produce by its example a powerful influence. Ibrahim Pasha is a confirmed toper; and if we should use a harsher word, we should probably convey to our readers a still juster idea of the extent to which he carries this habit. In Damascus, we found the table of the governor general of Syria loaded with wine; and his confidential friend and physician, a French gentleman, observed, significantly and jocosely, that his patron had fifteen thousand books in his library. We did not need the arch look, which accompanied these words, to enable us to correct the errata; for books, read bottles of wine.

Still this practice is neither altogether general nor public, and we found that much prejudice was excited against those who indulged themselves too freely and openly. A respectable French officer, high in the confidence of the Pasha, has renounced christianity and embraced the Moslem faith. We found him in command of the ancient city of Sidon, and he is at this moment the second officer in the army of Ibrahim Pasha, which is defending the entrance of Syria against the Turks. His new religion must sit lightly upon him, and the devout Mussulmen do not appear to have much confidence in the faith of their proselyte. What sort of a follower of the prophet can he be? said they; he never goes to the mosque; he drinks wine and eats pork. The days of Turkish fanaticism are indeed past. The time has been, and not long since, when his turban would not have protected his neck from the scimitar or the bowstring.

The entrance of the bay of Suda is from the east, and beyond is a high projecting point, which completely shelters it from the sea. To the north and the south are rugged hills, but to the west the break between the ridges continues and forms a level valley, which opens in about two miles at the city of Canea. There are two small villages upon the bay, occupying the declivity of the southern range of hills. The scenery is not uninteresting, relieved by little orchards of olive trees,

that precious gift of Providence, whose production is so essential to the inhabitants of the east. The plain leading to Canea is covered with a light sandy soil, and abounds in water, which might be used for the purpose of irrigating the crops, but which is almost wholly neglected. There are some villages upon the route, and traces of a considerable population.

Canea occupies the site of the ancient Cydonia, the mother city of the island, renowned for its power and opulence, and which was the theatre of many interesting events in the history of Crete. But the modern town extends over a small part only of the ancient one.

It is not the political capital of the island, but it is the place of the greatest commerce—and this preëminence it owes to its position in the most fertile region, to its port, where vessels of three hundred tons can enter, and to its vicinity, being within two miles to the bay of Suda, which affords safe anchorage to the largest ships.

It was formerly strongly fortified by the Venitians, but a portion of the works have been demolished, and another portion is in a state of dilapidation. This neglect is of the less importance, as it is probable the future possession of the island will depend more upon the decision of diplomacy than upon military expeditions.

The harbor is small and obstructed by ruins, and not safe in a northern gale. The buildings are old and in a state of decay, and every thing shows that the hand of oppression has weighed heavily upon the wretched population.

Mehemet Ali has established a rigid police through his dominions. Whoever possesses sufficient knight-errantry to seek dangers, either for the sake of recording them, or from any higher motive, would waste his time if he stopped in either of the provinces subjected to the sway of the Egyptian Pasha. He chooses to be, through himself or his agents, the only oppressor in his government; a part, indeed, which he fulfils with admirable ability. But the traveller is safe, not only in his person, but he is generally protected from imposition and extortion. In traversing the island of Crete, he would have nothing to fear but the usual casualties of a journey and the fatigues to which he would be exposed by the state of the country and the manners of the inhabitants.

From the bay of Suda we sailed down the coast, passing Retimo, the third city in importance, after Candia and Canea, in the island. It was a place of much distinction in the time of the Venitians, and it is filled with the evidences of their power and wealth in every state of decay. It stands upon a low cape, but its harbor is not well sheltered, and the mole which formed it has been almost destroyed. The channel has been so filled up with an accumulation of sand, that no vessels drawing more than thirty tons can enter. Those of larger tonnage must remain in an open roadstead.

The population is about eight thousand, and its commerce is principally carried on with Greece and the islands of the Archipelago.

When we arrived at Candia, the capital of the island, we unfortunately found Mehemet Ali there, with a part of his fleet, anchored before the town. We say unfortunately, because he had just given, in his own person,

an example of submission to his quarantine regulations, which left us no hope of a relaxation in our favor, as we had visited a suspected port within the limited period. Not having, at our disposition, the time necessary to procure admission, we abandoned the island and bore up for the Holy Land.

The city of Candia presents rather an imposing aspect from the sea. In its rear is a range of mountains which extend through the island, and from amid which the snow-covered top of Ida is prominently distinguishable from the rest of the chain. In the distance the city is thrown with beautiful effect against this ridge, though in fact it is surrounded by a considerable plain. The mountains, however, diminish much in height and the chain is almost interrupted, so that the gaps furnish convenient routes for traversing the island from north to south. The plain extends to the base of the ridge from which Ida projects.

The city contains about twelve or fourteen thousand inhabitants. It has a mole and a small port for vessels of light burthen; but for those of greater depth of water, it affords no protection but an open roadstead. It presents the aspect of an old Venitian town, rather than that of a Turkish one. The streets are wide and paved, but in a rough manner. There are some fountains, and occasional rows of trees, which produce an agreeable effect. The fortifications are nearly in the state the Venitians left them, somewhat repaired, in the most necessary places, but generally dilapidated. The guns are old and apparently unserviceable, almost as dangerous to the possessors as to their enemies. The bazaars are tolerably well supplied, and on the whole there is an agreeable air of business and neatness in the city, presenting a favorable contrast to the general aspect of Turkish towns.

The island of Candia extends about one hundred and sixty miles from east to west, and about thirty from north to south in its widest part. It is divided by a ridge of mountains, running longitudinally through the island, and separating the northern from the southern part. Towards the centre, this ridge is less elevated and precipitous, and communications from one coast to the other have been easily established; but elsewhere the passage is more difficult and the aspect of the interior more savage. The roads, or rather passes, have been wholly neglected, and are now tedious and dangerous. Wheel carriages are unknown, and the transportation of the productions to the coast forms an important portion of their cost to the purchaser. Frequently the solid masonry of the old Venitian bridges has survived the roads they were intended to connect, and evince the former flourishing condition of the country. There are no rivers—the streams descending from the mountains not deserving that name—but springs and rivulets are abundant, and under happier auspices might be employed in irrigating the fields. But, alas! the country presents almost one scene of desolation. It is well known that the olive is a tree of slow growth, requiring many years to reach maturity and to produce its fruit. The ruthless Turks have cut down a large portion of these trees, the work of centuries, and thus extended their vengeance to succeeding generations. We found the same result elsewhere in the east, wherever in fact man had arrayed himself against man. The first act of oppression is to cut

down the olive trees around a village, and then the labor of destruction is almost complete, for the miserable hovels are not worth the trouble of demolition. The plain from Athens to the Piræus was heretofore a magnificent olive orchard, but now its superb trees have almost disappeared, leaving scattered individuals to attest its former magnificence. With a little bread and a few olives a Greek soldier performs his duties and cheerfully encounters the painful marches over the rugged paths through his country. And the Greek peasant is happy, if he can provide a scanty supply of this favorite food for his wife and children. We were told at Athens of a curious division of property, by which, frequently, the ground belonged to one man, the tree to another, and the product to a third. We were also told what was the principle by which these respective rights were regulated and the rent of the owners secured. But we have no space for its development.

About twenty miles from the city of Candia, at the base of Mount Ida, is the cavern so celebrated under the name of the Labyrinth. It is in the vicinity of the site of the ancient city of Gortyna, whose remains yet attest its former power and opulence. The credulity of the ancients and their predisposition to the marvellous, are in nothing more remarkable than in the fabulous recitals concerning this "Big Cave," as it would be called in Kentucky, and the exaggeration of many modern travellers has been scarcely less marked, and is certainly much less excusable. That it was originally a natural cavern in a soft limestone rock, there is no doubt. Many of the chambers and passages have been increased by the hand of man. And the wonder is not that this should have been done, and this subterranean arylum occasionally resorted to by the inhabitants of the neighboring regions; but that in an enlightened age, doubts should have been elevated into mystery, and much learned *charlatanism* employed to envelope a very plain subject with difficulties. When the proximity of the city of Gortyna is recollected, and the contests in which it was involved for ages, together with the general state of insecurity, which has often prevailed upon this island, what more natural than that the inhabitants should occasionally seek refuge for themselves and their property in this secluded cavern, so difficult to be discovered and so easy to be defended; or, that in a succession of ages, the natural fissures in the rock should have been enlarged, and the whole work rendered more capacious and more comfortable? We are persuaded that this is the natural solution of all the mystery attending this subject. As to the story of the Labyrinth, and the thousand fables connected with it, they do not merit a moment's serious consideration, except so far as they furnish materials for an interesting chapter in the history of human nature; evincing on the one hand the fertility of the imagination, and, on the other, the extent to which credulity may be carried, either in an implicit belief in a monstrous fable, or in a more chastened faith, seeking the materials in bygone events, and gravely endeavoring to account for the violations, not only of probability, but of possibility, by combining some allegorical mystery with traditional facts.

One cannot but be struck with the resemblance between this cavern, and those to be found in the limestone regions of Kentucky. The description of the former is absolutely applicable to the latter, leaving not

the slightest doubt but that they owe their origins to the same common causes. If the traditions of the aboriginal inhabitants of Kentucky had been preserved, it may be that they would have furnished us a story quite as interesting as the adventures of Theseus and the destruction of the Minotaur. And if they had found a record as lasting and as beautiful as the Roman poet has bequeathed to posterity, we might not have envied the Cretan wonder the description of its

"Parietibus textum cœcis iter, ancipitemque
Mille viis habuisse dolum"——

in the time of the Greeks.

It is estimated that Crete contained twelve hundred thousand inhabitants. In the mutation of its fortunes, these have been successively reduced, so that under the government of the Venitians, they did not reach one million; but the diminution was frightfully accelerated by the Turkish yoke, which, with its accustomed destructive power, had brought this number down to about two hundred and eighty thousand before the commencement of the Greek revolution; and at present it does not exceed one hundred and seventy thousand, of whom one hundred and thirty thousand are Greeks and forty thousand Mahometans. The state of the population in former ages is sufficiently indicated by the accounts which are given of its hundred cities,

"Centum urbes habitant magnas"——

and the epithet even which Homer applies to it, "*Creta Hecatompolis*," marks the progress it must have made at that early period in the elements of wealth and power. And though this number of one hundred may have been rather a round one than numerically exact, still no doubt can exist, but that there were a great number of important towns in this island, towards the commencement of authentic history. Pliny, after enumerating nearly twenty cities upon the coast and as many in the interior, all existing in his time, adds, that the memory of sixty others was still preserved. The renown which the island enjoyed among the ancients, for its fertility and the mildness of its climate, is well borne out by these evidences of its adaptation to the support of a dense population.

The repulsive effects of Turkish conquest upon the countries subdued by the Mahometans, is one of the distinctive traits of their religious and social institutions. Among other nations there is a slow but gradual tendency towards amalgamation between the invaders and the invaded; and generally in a succession of ages, the peculiar characteristics of each are so softened, if not annihilated, that the original differences disappear and cease to produce any effect upon the new society. Not so with the followers of Mahomet. Their fanaticism never slumbers, and their religious dogmas raise an impassable barrier between themselves and the inhabitants of the countries overrun by them. It is a cardinal principle, not only of their policy but of their faith, that all the people they subdue, have justly forfeited their lives; and it is a practical corollary, that whether these shall be spared or not is a simple question of expediency. The English law is not the only one which delights in fictions; the Turkish code contains at least one of these subtle contrivances, by which results are obtained not originally contemplated by the lawgiver. When the conquered Rayahs are

freed from military execution, this exertion of Mussulman mercy is not a pardon but a reprieve. The penalty always hangs over them, and is ransomed from year to year by a tax, constituting a considerable item in the Turkish budget. Every person in the Turkish empire, not a Mahometan, pays this yearly contribution, under the pretence of its being due to the Sultan for his clemency in permitting the infidel dog to live under the shadow of his throne during another year.

As to intermarriages between the professors of Moslemism and christianity, this mode of uniting the races is impossible, because every such union is punishable with death, and the most sedulous attention seems to have been exerted in other respects to preserve the same system of separation. The Turk adopts a peculiar costume, one, which till lately, has not changed, and which has probably been unvaried since the days of Abraham; and he prescribes, if not all the costume, at least a part of it, which his conquered subjects shall wear. In courts of justice the christian's statement is valueless, and he has little to hope from a legal controversy with a fellow subject of the favored caste. The cardinal principle of the Turkish polity seems to have been, that a Mahometan is made to govern and a christian to submit; and this principle has been carried out in all the various forms that a complicated state of society presents. We say *has been*, because great changes have come over the Turkish institutions and greater yet seem to be in progress.

At this moment, in the island of Crete, the condition of the Mahometans, if not actually worse than that of the Greeks, promises less melioration. The former are generally all poor, with the exception of a few rich Agas. Before the revolution they were Janissaries, and were maintained by their privileges and by the taxes and extortions wrung from the latter. But now this redoubtable order is suppressed, and its remains, driven to their own resources, are barely able to procure the necessaries of life. Their number is in a state of rapid declension; while the Greeks, relieved from some of the oppressions which weighed them down, and finding their industry better rewarded, and their acquisitions better protected, are gradually advancing in improvement. Our intelligent informant told us, that four years ago scarcely a house was standing or a field cultivated; but that now the signs of prosperous industry began to meet the eye of the traveller in different parts of the island.

The principal agricultural product of Crete is the olive. It gives the most profitable return; though, at present, from the dearth of labor, it is estimated that more than one-fifth of the olive trees are neglected; laborers not being found to gather the fruit. Wheat is also a staple article, but unfortunately the province of Messara, heretofore most devoted to its culture, was one of the districts which suffered most from the revolution; and this circumstance, with the general depression of agriculture, has led to such a diminution in the supply, that large quantities of this article have been imported for consumption. However, the culture begins to revive.

The same causes have operated to depress the production of another of the staple articles of Crete—that of wine. The soil and climate are favorable to the growth of the vine, and several species of grape have

been cultivated, producing different kinds of wine much esteemed, and which were formerly in demand for exportation. But the supply is now restricted to the domestic consumption; though, as agriculture and manufactures revive, there is little doubt but that this branch of industry will be again cultivated with success.

Crete produces the following articles for exportation:

Oil.—Which is peculiarly adapted from its quality to the manufacture of soap, though the quantity varies greatly from year to year.

Silk.—Of a superior quality, but in small quantities.

Raisins.

Honey.—Highly esteemed through the east.

Chesnuts.—An important article of consumption in these regions. Those of Crete are in much demand through the Archipelago.

Cheese.—Formerly Crete possessed large flocks of sheep, and there was manufactured from their milk a cheese, known under the name of sphakian, esteemed through the east. The troubles in the island led necessarily to the diminution of the flocks, but they are now increasing, and cheese is again becoming an article of exportation.

Whetstones.—Said to be of excellent quality.

Carobs.

Vallonea.

Almonds.

Soap.—The habits of the eastern nations lead to a great consumption of soap. Their ablutions are frequent; and preferring fingers to knives and forks, they find themselves obliged, after eating, to wash with soap and water. We have often admired the dexterity with which the servants manage this ceremony. The water is always poured from a vessel with a spout, resembling one of our coffee pots, upon the hands, which are held over a basin, and the operation is a very comfortable one, while the habit itself of personal neatness is conducive to health.

Crete possesses many manufactories of soap, and this article, which is of an excellent quality, is exported to all the countries in the Levant. Olive oil is used in its manufacture. The silks of Crete go to Trieste; the raisins to Tunis, Malta, and Trieste; the carobs to Malta, Genoa, and Constantinople; the vallonea to Trieste; and the almonds to the Black Sea. The other articles of produce principally to Turkey.

Crete imports from the Adriatic Gulf boards and nails, now much wanted for the construction and repair of houses,—from Germany and England, cloths, cottons, calicoes, &c. A few articles of American manufacture find their way there indirectly. Colonial products, coffee, rum, sugar, &c., are supplied by Trieste, Marseilles, and Malta; leather by Leghorn and Russia; iron by Trieste; corn, when necessary, by the Black Sea, Macedonia and Anatolia; rice by Alexandria and Piedmont; butter by Africa; and cod fish by France.

The commercial relations of Crete are principally with Syra and Trieste, which serve as entrepôts, whence the articles required are imported, from time to time, in small quantities.

The pre-existing commercial regulations through the Turkish empire must undergo great changes in consequence of the treaties recently negotiated by France and England at Constantinople. The principles will

no doubt be extended to all other nations. If faithfully executed, the odious monopoly established by Mehemet Ali in Egypt will be abolished, and that unfortunate country delivered from one of the heaviest oppressions under which it labors. But the Pasha is shrewd, avaricious and unprincipled; and he may find the means to render abortive all the efforts of the commercial interest of western Europe, to open its natural channels to the trade of Egypt. This system of monopoly, the last and worst contrivance of vice regal cupidity, has not found its way into Crete. The Egyptian merchant—for the Pasha is the only free merchant in his metropolitan country—has yet spared his conquered provinces this infliction. He may be waiting the firmer consolidation of his power and the final settlement of the questions pending between him and his nominal sovereign, but actual rival, the Sultan. His recent victory near Aleppo, and the death of his personal enemy Mahmoud, and the consequent stirring events, which at the moment we are writing are going on in the east, seem to assure to him the great object of his ambition—the establishment of an independent and hereditary government in his family.

The import and export trade of Crete is fettered with few impositions, and many other countries might draw a profitable lesson in political economy from Turkish and Egyptian moderation. The goose is allowed to lay its golden egg daily, without the fear of death to extract from it the precious deposit, and thus, in the fallacious hope of immediate acquisition, to sacrifice both present and future. The duties of entrance and clearance are three per cent, without any addition for coastage transportation. There is neither tonnage nor wharfage nor light-house duty, and the pilotage is in fact whatever the vessels please to pay, for the regular allowance is but three piastres, say fifteen cents. As to manifests, and all the machinery of custom house security against frauds, the Cretan regulations make short work of them. The captain or merchant interested in the importation or exportation, makes his declaration at the custom house, and the affair is finished.

The Mahometan governments meddle but little with foreigners living within their dominions. As long as these refrain from any acts compromising the public peace, they are left to the jurisdiction of their own consuls. This jurisdiction is aided, if necessary, by the local police, and the consuls are vested with very extensive and summary powers over their fellow countrymen. If a foreigner commits an offence against the peace of the island, he is delivered to his proper consul, who tries and punishes him agreeably to the laws of his own country. Formerly, whenever an injury was committed by a foreigner, a tax or *oranie* was levied upon the whole body of foreigners, and a fund thus raised, by which the innocent paid for the crimes of the guilty. But all this is changed, and not only has the tax disappeared, but the offender is referred, as we have seen, to the jurisdiction of his own consul. The subjects of the new kingdom of Greece are yet liable to some vexatious restrictions, the result of the feeling inspired by recent events, and perhaps by the relations of language, religion and manners, which connect them with the great body of the Cretan people. But these precautions will gradually disappear, and the Greeks be

admitted fully to participate in the freedom enjoyed by other foreigners; which, in fact, amounts almost to immunity.

The average annual importations of Crete are estimated at 25,300,000 piastres, equal to \$1,265,000, and the exportations at 22,500,000 piastres, equal to \$1,125,000. The number of vessels which entered in 1837 was 717, with a total tonnage of 30,532 tons, and manned by 4,992 men. The number which cleared during the same year was 730, with a tonnage of 31,629 tons, and with crews amounting to 5,577 men.

The revenues of the island for the same year are exhibited in the subjoined statement:

	Piastres.
Taxes on agricultural produce,	4,950,000
Rent paid in kind by the farmers of the government lands,	500,000
Capitation tax,	890,000
Duties on oil exported,	1,030,000
Duties on soap exported,	705,000
Duties on other exports,	120,000
Custom house duties on goods imported,	210,000
Duties on agricultural produce, paid at the gates of the several cities, equivalent to the active duties of France,	180,000
Duties on certain articles to defray the expenses of the cities,	171,000
Receipts from courts of justice,	150,000
Receipts from lazarettos,	100,000
	8,926,000

Equal to \$446,340.

The expenditures during the same year were as follows:

Salary of the governor,	2,200,000
Pay, rations, &c., of the Arab troops,	3,500,000
Pay, rations, &c., of 1,300 Albanians, irregular troops,	3,500,000
Salaries of the members of the three councils, and incidental expenses,	600,000
Salaries of the treasurer, clerks, &c.,	120,000
Salaries of the members of the courts of justice, and the officers of the custom house,	100,000
Salaries of those employed to collect the taxes imposed on certain articles to defray city expenses,	120,000
Salaries of officers of the lazaretto, and incidental expenses,	70,000
	7,910,000

Equal to \$395,500.

We annex as a statistical curiosity the following abstract of the extraordinary expenditures made by Mehemet Ali in Candia, since the island came into his possession; a portion of which, were for works of internal improvement.

	Piastres.
For building at Candia a small lazaretto, where vessels with clean bills of health only are received,	30,000
Do. do. at Retimo,	20,000
Do. do. at Spinalonga,	20,000
Do. do. at Lontia,	15,000
Do. do. do.	65,000
Amount carried up,	150,000

	Piastres.
Amount brought up,	150,000
For building a lazaretto at Suda, where all vessels are received, coming with foul bills of health, and infected or suspected merchandize,	1,146,500
Repairing and partly clearing port of Retimo,	171,500
Repairing the port of Candia,	575,000
Repairing the fortress of Canea,	280,000
Repairing the fortress of Carabonsa,	65,000
Repairing the arsenal at Canea,	50,000
Repairing the fortress at Suda,	50,000
Cost of machinery for clearing port of Canea,	380,000
Cost of an aqueduct at Candia,	305,000

(Equal to \$166,150.) 3,323,000

When the allied powers of Europe interfered efficaciously for the establishment of the kingdom of Greece, considerations of policy prevented the annexation of Candia to the new state; to which union it was called by the wishes of its inhabitants, whose language, associations and interests connected them with their brethren of the same stock, the descendants and remains of the subjugated eastern empire. However, the island was not restored to the Turks, but was secured to Mehemet Ali, in whose possession indeed it had been for some time. He was required to govern it without the imposition of any new taxes; a condition which, if faithfully observed, would go far to defeat one of the principal objects of Mahometan governments—which is to wring from the wretched population all the money that power can procure and poverty furnish. In the present constitution of the island, it is governed by a Pasha, whose authority is in fact unlimited, but whom the policy of the Vice Roy has surrounded with some institutions having the appearance of a representative character. And though no usefully practical result, to any great extent, has yet been obtained, because the elements of administrative knowledge are sparsely scattered among the Turkish population, still the experiment is an interesting one, and it is to be hoped it will be continued, and lay the foundation of a gradual melioration in the political institutions of the island. The whole country is divided into twenty cantons, each of which sends two members to their proper municipal council. There are three of these councils—one at Candia, one at Retimo, and one at Canea. One of the deputies from each canton is a Greek, and the other Turk; though this regulation has not been invariably observed, in consequence it is said of the difficulty of finding competent persons. But there is a singular difference in the application of this charge of incompetence; one of our authorities referring it to the Greeks and the other to the Turks. These councils have a legislative as well as a judicial power. They frame the laws and try and punish the breaches of them. But the pain of death cannot be inflicted without the approbation of the governor. In addition to these duties, they have important administrative powers, such as the enforcement of the regulations concerning the public health, the fixing of the price of provisions, the superintendence of the public works, &c. "The deputies receive a trifling salary, and being rather nominated by the governor than elected by the people, cannot be supposed to be very independent."

We cannot close this sketch without acknowledging

our obligation to Mr. Bonnal, the consul of the United States at Canea. His long residence in the island, together with his general information, gives great authenticity to his statements, and he seems as eager to communicate as the traveller is to collect. He enjoys a high reputation at Canea, and deservedly so, and is a most worthy representative of our country in that remote place. We know no subject in the legislation, connected with our external relations, which demands more prompt and urgent attention than the situation of our consular establishments, more particularly those placed in Mahometan countries. Almost every where, indeed, the office of American consul is little better than an eleemosynary employment. Scattered over the globe, and stationed at all the interesting commercial points, these officers are dependent upon casual fees—altogether, except in a very few instances, inadequate to their support. On the continent of Europe, at some of the consulates, these fees are principally composed of charges upon the American traveller for the *visa* of his passport; that is, for the certificate of the consul, under his official seal, that he has examined the passport—an indispensable ceremony—without which the traveller would find his journey arrested by the police. But this tax is paid with much reluctance, and in fact ought to be abolished. But a substitute, however, should be immediately provided by law in an annual fixed allowance. And, what is still worse, many indispensable expenditures made by the consuls are left without being remunerated, because there is no legal provision for their allowance.

There is a little American mission at Canea, at the head of which is Mr. Benton—a worthy man—devoting himself zealously to the task he has undertaken, principally the education of youth. He has met with some difficulties from the local authorities, but we understand these are yielding to a better knowledge and a more correct appreciation of his motives and objects, and we could scarcely invoke for the island a more interesting institution than the firm establishment of this missionary undertaking.

No American can meet these little bands of pilgrims, which his country now sends forth to every benighted portion of the world, without an emotion of pride and patriotism as pure as it is profound. With a devotion at once ardent and enlightened, these generous apostles of religion, morality and education, gird themselves up to their task, and abandoning their native land with all it offers, go forth to regions, marked by ignorance, intolerance and misery as their own. They go indeed under the star-spangled banner, but it is neither to gather riches nor to carry war. Higher and holier sentiments impel them to the journey, and support them in the trials they are called upon to encounter. It was our good fortune to visit several of these establishments in the east, and we found that their inmates had conciliated the respect of the native inhabitants and were laying the foundation of future usefulness. These green spots in the moral desert are indeed refreshing, and doubly so to an American, as tributes of the generous zeal of his country to these regions of early civilization. We sincerely hope they may continue to multiply and flourish, and that the fructifying streams from the western continent which give them nourishment, may not fail in their supplies.

THE WATER.

BY MRS. SEBA SMITH.

How beautiful the water is!
 Didst ever think of it,
 When down it tumbles from the skies
 As in a merry fit?
 It jostles, ringing as it falls,
 On all that's in its way—
 I hear it dancing on the roof,
 Like some wild thing at play.

'Tis rushing now adown the spout
 And gushing out below;
 A happy thing the water is,
 While sporting thus, I know.
 The earth is dry, and parch'd with heat,
 And it hath long'd to be
 Releas'd from out the selfish cloud,
 To cool the thirsty tree.

It washes, rather rudely too,
 The flowret's simple grace,
 As if to chide the pretty thing
 For dust upon its face.
 It scours the tree, till every leaf
 Is freed from dust or stain,
 Then waits till leaf and branch are still'd
 And showers them o'er again.

Drop after drop, is tinkling down,
 To kiss the stirring brook,
 The water dimples from beneath
 With its own joyous look—
 And then the kindred drops embrace,
 And singing, on they go,
 To dance beneath the willow tree,
 And glad the vale below.

How beautiful the water is!
 It loves to come at night,
 To make you wonder in the morn
 To see the earth so bright;
 To find a youthful gloss is spread
 On every shrub and tree,
 And flowrets breathing on the air,
 Their odors pure and free.

A dainty thing the water is,
 It loves the flowret's cup,
 To nestle mid the odors there,
 And fill its petals up—
 It hangs its gems on every leaf,
 Like diamonds in the sun;
 And then the water wins the smile,
 The flowret should have won.

How beautiful the water is!
 To me 'tis wondrous fair—
 No spot can ever lonely be,
 If water sparkles there—
 It hath a thousand tongues of mirth,
 Of grandeur, or delight;
 And every heart is gladder made,
 When water greets the sight.

RETURN TO DELAWARE.

Oh! bright to my eye was the billow that burst,
In distance, on Delaware's green, shady shore;
For there in the cradle of liberty nurs'd,
In childhood, my country I learned to adore.

Land of the beautiful! land of the brave,
The gifted and glorious, the favored and free!
Oh! death to the dastard, and chains for the slave,
Who'd refuse to preserve, or perish with thee.

Green home of my youth, still as bright to my eyes
Are thy flowery fields, and cloud-covered hills!
And bright as the sunlight, that lumines thy skies,
Is the light in my mind, which fond memory fills.

Now brighter and brighter, yon dim shore appears—
'Tis the halcyon of hope, 'tis the beacon of bliss;
And Affection has opened her deep fount of tears,
For, oh! there's no home so happy as this.

In fancy I see the gay beautiful bower,
Where the minstrel to woman in boyhood sung;
Where adorned by her hand with a fanciful flower,
The harp of his happy heart often has hung.

Sweet land of philosophy, land of the fair,
A prodigal son I return to thy shore;
To the home of my childhood I fondly repair,
To wander away from thy pleasures no more.

MILFORD BARD.

CURRENTE-CALAMOSITIES:

TO THE EDITOR.

By the Author of "The Tree Articles."

NO. XI.

MY BOOKS UNPACKED.

I resume my pen, this month, still surrounded by my unpacked library, which is not yet quite set up, however. We, dear reader, like learned Bellario and the fair Portia, in the play, will yet "turn o'er many books together," before all is set "to rights;" and, in the meantime, take we up, as promised last month, this edition of BEAUMONT AND FLETCHER, which opens at the mark we left, with the TRAGEDY OF "VALENTINIAN."

Of all the works of this literary copartnership I think I have been most pleased, upon a careful perusal, with this play. It bears the name of Fletcher alone, and was first printed in the year 1647. I do not award it so high a meed of praise as a mere dramatic production; for its plot is irregular and ill-contrived, and it seems to inculcate no very important general moral. But as a poem, it is unrivalled by any other work of its authors. The introduction of the Emperor's parasites opens the way for many indelicate allusions: yet, in this respect, the play, compared with others, is certainly among the least exceptionable.

A general murders his best friend, for trying to prevent his revolt, in revenge for the rape of his wife by the Emperor, Valentinian. That monarch is poisoned by a

servant of this friend; and Maximus assumes the purple, is married to Eudisia, the relict of Valentinian, and is put to death by her, she believing him false. But, as I have already said, the play derives no interest from its plot, but from the general tone and style of its poetical execution, and the deep knowledge of all the phases, and all the workings of the human heart, which is manifested throughout the whole, by its authors.

The meeting of Decius, Maximus, and Lucina, after the visit to the Emperor, affords a scene of great power; the concealment of his indignation, by Maximus,—his bitter agony from a breaking heart,—his terribly passionate and scornful irony, make the reader shudder and weep, at once.

The first extract I shall make, (and in quoting, I shall entirely disregard the course of the story,) is a description of Lucina (the wife of Maximus,) by Chilax, a pander to Valentinian, who had been employed to carry her off. He is addressing the Emperor:

"She has in her—

All the contempt of glory, and vain seeming
Of all the stoics: All the truth of christians,
And all their constancy. *Modesty was made*
When she was first intended: When she blushes,
It is the holiest thing to look upon:
The purest temple of her sect that ever
Made Nature a bless'd founder."

And another heartless pander to the monarch's unholy lust thus strikingly paints her:

"I ask'd her,

After my many offers, walking with her,
And her as many down-denials, how
If the Emperor, grown mad with love, should—
'Stop,' said she,
And pointed to a Lucrece that hung by,—
And with an angry look, that from her eyes
Shot mortal fire against me,—she departed!"

This is certainly "a gem of purest ray serene." Ardelia and Phorba, courtezans, are employed by Valentinian's wicked tools, to aid in this despicable plot against Lucina, who thus addresses them:

"If ever ye had fathers, and they, souls;
If ever mothers, and not such as you are;
If ever any thing were constant in you,
Besides your sins, or common but your curses;
If ever any of your ancestors
Died, worth a noble deed, that should be cherished;
Soul-frightened with this black infection,
You'd run from one another to repentance,
And from your guilty eyes drop out those sins,
That made ye blind and beasts!"

To this heart-searching appeal Ardelia only remarks,

"So godly!

This is ill-breeding, Phorba!"

Valentinian says to Decius, his general,

"Take heed! you were better
Build your own tomb, and run into it, living,
Than dare a prince's anger."

Maximus thus addresses his wife, Lucina, after the hellish design of Valentinian had been forcibly accomplished:

"Go, Lucina!

Already in thy tears, I have read thy wrongs:—
Already found a *Caesar*. Go, thou lily,
Thou sweetly-drooping flower! Go, silver swan,
And sing thine own sad requiem! Go, Lucina,
And, if thou dar'st, outlive this wrong."

Can any thing be more fine than this? And again;
Lucina speaking of Valentinian says, forcibly,—

"And when he weeps, as you think, for his vices,
'Tis but as killing drops from hateful yew-trees,
That rot their honest neighbors."

Here is a song from the last act; the beauty of the language, the smoothness of the rhythm, and the imaginative tenderness of which are peculiarly striking.

"Care-charming Sleep thou easer of all woes,
Brother to Death,—sweetly thyself dispose
On this afflicted prince: fall, like a cloud,
In gentle showers: give nothing that is loud
Or painful to his slumbers: easy, sweet,
And, as a purling stream, thou son of Night,
Pass by his troubled senses: sing his pain
Like hollow-murmuring wind, or silver rain.
Into this prince, gently, oh, gently slide,
And kiss him into slumbers, like a bride."

Who, of all the poets, has transcended this? Lucina had resolved to follow the illustrious example of that Roman matron Lucretia, if like her's the alternative was to be life with dishonor, or death; and her own husband, Maximus, as we have seen, had strengthened her in this stern purpose by bidding her, like a silver swan, to go, and sing her own sad requiem. She is dishonored, and then dies by her own hand. Valentinian, her royal ravisher, then says to his parasites,

"She is not dead—wake her!
She sleeps!

"Licinius. We are no gods, sir!
If she be dead, to make her new again!

Valentinian. She cannot die! She must not die! Are those
I plant my love upon but common livers?
Their hours, as others', told them? Can they be ashes?
Why do you flatter a belief into me,
That I am all that is? 'The world's my creature;
The trees bring forth their fruits, when I say "Summer!"
The wind, that knows no limit but his wildness,
At my command moves not a leaf: the sea,
With his proud mountain-waters, enying heaven,
When I say "Sull!" runs into crystal mirrors!—
Can I do this, and she die? Why, ye bubbles!
That with my least breath break, no more remembered:
Ye moths! that fly about my flame, and more perish:
Ye golden canker-worms, that eat my honors,
Living no longer than my spring of fury;—
Why do ye make me God, that can do nothing?
Is she not dead!"

Here is a masterly description of honest poverty, exulting in its superiority over hypocritical and empty greatness: it is addressed to one of the minions of court-favor, by Pontius, a centurion, who had been cashiered by one of the Emperor's generals.

"I am poor,
And may expect a worse; yet digging, pruning,
Mending of broken ways, carrying of water,

Planting of worts and onions,—any thing
That's honest, and a man's, I'll rather choose!
(Ay! and live better on it, which is juster!)
Drink my well-gotten water with more pleasure,
When my endeavor's done, and wages paid me,
Than you do, wine: eat my coarse bread not cursed,
And mend upon it:—(your diets are diseases:)
And sleep as soundly, when my labor bids me,
As any forward pander of ye all,—
And rise a great deal honest! My garments,
Though not as yours, the soft sins of the empire,
Yet may be warm, and keep the biting wind out,
When every single breath of poor opinion
Finds you through all your velvet!"

The character of old Decius, the victim to the monarch's cruelty, and a martyr to "as much goodness as could die, and excellence as could live," is finely drawn. The following extracts are from his dying speech, addressed to one of his friends, Phidias:

"This I charge ye,
(Because ye say, ye loved old Decius ay:)
See my poor body burned: and let some king
About my pile, of what I've done and suffered,—
If *Caesar* killed not that too. At your banquets,
When I am gone, if any chance to number
The times that have been sad and dangerous,
Say how I fell, and 'tis sufficient!

Be there
No annals of Decius, but 'HE LIVED.'
The winged feet of flying enemies
I've stood and viewed thee mow away like rushes,
And still kill the killer."

I have mentioned that the Emperor was poisoned by the servant of that friend himself had murdered; and my last extract is his dying speech. It is a mighty conception of the author, this! Imagining the parting thoughts and horrid blasphemies of a wretch whose life had been devoted to the worship of his own senses; whose hand had been raised only to distress,—whose tongue had been made vocal only to damn,—his eye looking but to wither,—is indeed a stupendous effort of human genius!

He is dying of poison, and says, as life is fast ebbing away,—

"Gods! let me ask, what am I, that ye lay
All your afflictions on me? Hear me! hear me!
I do confess I am a ravisher—
A murderer—I hated *Caesar*: Oh!
Are there not vows enough—and flaming altars—
The fat of all the world for sacrifice—
And when that fails, the blood of thousand captives,
To purge those sins, but I must make the incense?
I do despise ye all! Ye have no mercy,
And wanting that, ye are no Gods! Your parole
Is only preached abroad to make fools fearful,
And women, made of awe, believe your heaven.
Oh! torments—torments—torments! Pains above pains!
If ye be any thing but dreams and ghosts;—
And truly hold the guidance of things mortal;—
Have in yourselves times past, to come, and present;—
Fashion the souls of men, and make flesh for them,
Weighing our fates and fortunes above reason;—
Be more than all, ye Gods! great in forgiveness!
Break not the goodly frame you built, in anger—
For ye are things, men teach us without passions.
Give me an hour to know ye in! Oh, save me!

But so much perfect time ye make a soul in,
Take this destruction from me!—No! you cannot—
The more I would believe ye, more I suffer!
My brains are aches—now, my heart, my eyes—Friends,
I go! I go! More air! more air! I'M MORTAL!"

[Dies.

Here, while the volume is open before me, I may as well transcribe three beautiful stanzas from the same fine pens.

"Hence, all your vain delights!
As short as are the nights,
Wherein you spend your folly:
There's nought in this life sweet,
If man were wise to see't,
But only melancholy!
Oh! sweetest melancholy!

Welcome! folded arms, and fixed eyes!
A sigh, that, piercing, mortifies!
A look, that's fastened to the ground!
A tongue, chained up without a sound.
Fountain heads,—and pathless groves,—
Places which pale passion loves,

Moonlight walks, when all the fowls
Are warmly hous'd, save bats and owls;—
A midnight-bell, a parting groan,—
These are the sounds we feed upon.

Then, stretch our bones in a still, gloomy valley,
Nothing's so dainty sweet as dainty melancholy!"

The following lines are from "The Queen of Corinth," by the same poets, and having copied them, we will put BEAUMONT and FLETCHER on the shelf.

"Weep no more, nor sigh, nor groan,—
Sorrow recalls not time that's gone!
Violets plucked, the sweetest rain
Makes not fresh, nor grow again.
Trim thy locks,—look cheerfully,—
Fate's hidden ends eyes cannot see:
Joys, as winged dreams fly fast,
Why should sadness longer last?
Grief is but a wound to woe,—
Gentlest fair, mourn, mourn no more."

My next shall be a continuation of this subject, but more various in its topics, and of a somewhat lighter strain. At present, adieu!

LETTERS FROM OUT THE OLD OAK.

NO. II.

My dear Messenger,—Discarding every thing like formality, you perceive I already assume the style of an old and intimate acquaintance, and in place of the coy distant address of Mr. Editor, have adopted the more social and affectionate one of my dear Messenger. I have often imagined, from the writings of the author, we might form a correct idea of the character of the man; such I am sure was the case with Byron; and if Willis's delineation of the right-amiable Mrs. Bulwer be true to life, I have not been mistaken in my estimate of her ladyship, from a perusal of the dedication affixed to her *Cheveley*, or the *Man of Honor*. Well, I was about making an application of this dictum to myself, but I will leave this to your more intelligent readers, and pass on. Night sits enthroned in darkness, and one solitary star, riding high and wan in its distant sphere, is holding its lonely vigil over the page upon which your correspondent embodies the fleeting reflections of an idle hour. A few old dusty volumes of un-

couth shape and size, lie scattered around me; and the profound stillness of the summer's night, is only broken by the deep-mouthed baying of the faithful watch dog. Imagination pictures to herself the ghosts of my ancestors, frowning upon the degenerate apostasy of their renegade descendant, who, forsaking the time-honored occupation of his forefathers, would call in question the wisdom of that philosophy which would entail upon the child the avocation, sentiments, and opinions of his parent. In the estimation of these venerable sages, book-learning should be left exclusively to the wealthy and high-born; to the plain farmer, so far from being a *sine qua non*, it but served to distract his attention with a thousand theoretical hypotheses, utterly at variance with the safe and advantageous prosecution of his calling. Science and agriculture were as diametrically opposed as light and darkness; the latter capable of receiving no assistance from the former, nor of reflecting any light upon her researches. Science was to be cultivated by the pale-face man of letters in the silent retirement of his chamber, whilst agriculture, like the mechanical arts, could only be advantageously pursued by him whose life had been practically devoted to its study. The expression of opinions so wide of fact, might at this day excite some surprise, but my countrymen are not now what they were some seventy years back, though I am not entirely satisfied but that many still afford practical illustrations of this same doctrine. The condition of our country at that time was such, as to afford few comparative facilities for the attainment of an education, and those few were solely within the reach of the aristocratic and wealthy. The stirring events of the Revolution, and the consequent excitement produced upon the minds of the people, caused to some extent a suspension in the operations of the social system. After the conclusion of that struggle, the entire change which had been effected in government, produced a change almost equally perceptible in the manners of the people. Though the artificial distinctions in the various grades of society, which existed in England, had never been recognized in Virginia, yet the line of demarkation between "distinguished families" and the residue of the community, was clearly defined and well understood. Old family mansions, whether protected by the law of entails or not, descended regularly from sire to son, whilst the right of primogeniture secured the entire landed estate in the hands of the eldest born. Under our republican system, however, these laws, which hitherto had virtually debarred the middle ranks of society from the hope of making any permanent acquisition of real interest were abolished, and others enacted in their stead, suited to the increased exigencies of society, and tending to facilitate the transfer of real property, as the convenience of families or the wants of the individual might demand. Industry and economy were now left free to acquire, and an opportunity presented "the many" of building up baronial estates similar to those already existing, or at least of participating in the wreck of such as were ready to decay. Money, therefore, became the great desideratum, and wealth, not education, the legacy which the parent was most desirous of bequeathing the child. These causes were not of a local or sectional character; but perhaps their influence operated to a greater extent in the tide water

sections of Virginia than elsewhere. Be this as it may, some cause existed to produce the effect. The productive resources of our State have not been developed; nor has the cause of education been sufficiently advocated or attended to. My county, in common with others, has suffered from the neglect of matters so important and essential to national improvement and national prosperity.

*Sæpe, malum hoc nobis, si mens non lava fulesset
De celo tactas memini prædicere quercus;
Sæpe sinistra cava, prædixit, ab illice cornix.*

Incessant and eternal motion, is, however, the law, not less of rational than inanimate nature. Looking to inanimate nature alone, there is not a shrub, or flower of the field, but that would serve to impress it upon the mind. The most usual and familiar phenomena testify to the truth of the assertion, with an impressive emphasis, which man can neither mistake nor question. "It is indelibly imprinted upon the face of the earth, in revolution and in change; indelibly, also, on that of the heavens, in never-ending exhibitions of wonder and of beauty." So intimately blended is it with all the functions of organized animate beings, that motion may well be said to be typical of life, whilst its absence is the unerring emblem of death. Nor is it the law of matter alone. It is equally applicable to mind. Neither the one nor the other can ever remain at rest. Progress or retrograde it must. It is the stern command of inexorable, unyielding destiny. Nations, like individuals, are its subjects, and under the influence of its operations—their history is but unending revolution. Thus has it been with us—many of the customs of our forefathers lie buried in their graves. Time has introduced innovation, and change succeeded unto change. Even the very sports and amusements of the young are not what they once were. The condition of society has been improved. A thousand presses are daily sending forth their winged messengers, laden with the chosen arcana of science; seminaries, academies, and colleges have been instituted; and the increasing demand for the productions of intellect and genius, must ultimately lead to results corresponding to the efforts made. The operation of these causes has not been entirely unproductive. Their influence has been felt; and so long as they continue to operate, improvement must be the consequence. As a citizen and son of Virginia, proud of her honors, and alive to her interests, I reiterate the compliment paid the editor of the Farmers' Register, by one of her congressional representatives—"That he has done better service to his State, than all her politicians combined, for the last twenty years." My county has not remained stationary amid the buzz of revolution and of change. The dissemination of correct views, and sound principles, relative to agriculture, must introduce improved systems of cultivation. Every facility here, which the farmer could wish or desire, Nature has placed within his reach. A country originally fertile, remarkably champaign, and intersected with numberless streams capable of boat navigation, needs only the hand of industry and enterprise speedily to approximate the favored Eutopia, as pictured by the dreaming visionary. The very rivers which bathe her shores and beautify her scenery, may be made to afford inexhaustible supplies of the finest manures. Yes, every wave of the majestic Potomac, for some months

in each year, bears on its bosom to the beach, a boon which would lend verdure to sterility, and cause the wild flower to bloom more luxuriantly and beautifully. Her surface is white with the merchantman's canvases, and each breeze may waft some portion of the productions of our soil to the first marts of our country. Internal improvements we need not. The voice of our representative is never heard in the hall of our legislature asking an expenditure of public funds for the construction of rail roads or the excavation of canals. The Rappahannock and Potomac, fair sisters, with their numerous creeks and inlets, are Nature's highways; we ask not of Art the exercise of her wand, or the display of her powers. A proper application of the means, which our locality presents, will develop resources amply sufficient, and Plenty, fair goddess, blending her blessings with the graces of our land, cause the home of Washington to become the Eden of Virginia.

The cause of agriculture, nevertheless how important soever it may be to us, is not one upon which I look with so much interest, as that of education. "Animi imperio, corporis servitio, magis utimur," says Salust; the one excelling the other as the gods were to superior brutes. The sentiment has lost none of its beauty or force, from its antiquity, whilst the truth of the old Roman's assertion would be well sustained by the testimony of the nineteenth century, in which of a truth, *arma cedant togæ, concedat laurea linguæ*. At no period in the history of mankind, has intellectual acquirement been more highly appreciated than now. Genius has never been cheered on her pathway with more thrilling plaudits, nor has her brow been encircled with a greener wreath, than that with which America is ready to reward her. In the best days of Augustan literature, when Mæcenæ had drawn about the throne of the Cæsars those living and undying lights which yet clothe it in glory and splendor, Intellect was not more highly prized, more richly rewarded. The field for her labors is illimitable—the necessity for her exertions coeval and coeternal with the existence of man. Considerations of high moment call on the American, with peculiar emphasis, to extend and disseminate every facility which our country can afford, for the promotion of information. Upon this pillar rests the question of man's capability for self-government,—the experiment of our ancestors, founded on this presumption, is dependent upon the wisdom of their descendants for its final completion. The cause of education is onward in its progress, *et sic semper esto*.
NUGATRITE.

Westmoreland County, Va.

A FRAGMENT.

Oh! when in Death's arms, this fond bosom reposes,
And the heart that adored thee, hath beat its last hour,
Bind round my pale brow a rich wreath of the roses,
That grow where we met in thy beautiful bower.

And when o'er my grave, thou shalt stand with emotion,
To gaze on the bard, as he lies on his bier,
Oh! remember the minstrel's undying devotion,
And drop on his bosom affection's fond tear!

When the moon, o'er my tomb, in her beauty shall wander,
And the bright star of eve, in the western sky set;
Oh! loved one, then come, bend thy knee there, and ponder
On all that hath passed, for thou canst not forget.

MILFORD BARD.

THE FOREST.

Ye dear old Forests! how I love,
At balmy close of summer day,
Along your flowery paths to rove,
And through your bowers of laurel stray.

To muse beneath your leafy plumes,
While slow and deep the breezes sigh;
And Memory chants amid your glooms
Low requiems to the days gone by.

Not years of youthful bliss were those
I've pass'd beneath your chequer'd shade;
But gloomy seasons, dark with woes,
By loneliness more grievous made.

How oft I've hasten'd to your bowers,
With aching heart, and weary eye,
To weep amongst the dewy flowers,
While zephyrs gave me sigh for sigh.

But then, though sorrow was my lot,
Some blessed hours would intervene;
And here and there a sunny spot
Records some dearly cherish'd scene.

A sister's hand has touch'd those flowers,
A brother's foot has linger'd here;
Friendship has sat beneath these bowers,
With sunny eye, and soul sincere.

And He who heeds the mourner's cry,
Has in these shades a mercy seat;
Here have I heard his voice of joy,
While humbly bending at his feet.

Ye dear old Forests! I have wept,
And smil'd and pray'd, your shades among,—
And ye have listen'd while I swept
My wild harp to the unstudied song.

And when I sleep the dreamless sleep,
Ye'll be a trophied tomb for me;
Where Nature's self will sigh and weep,
And wild birds hymn mine elegy.

LYDIA JANE.

ENTHUSIASM.

As the action of wind upon fire, so oftentimes is that of enthusiasm upon the flame of action or admiration. It is made to burn brighter for awhile, but only to go out the sooner. Enthusiasts taking up strong likes and dislikes, if they are once convinced of a flaw in the character of a person whom they had admired, immediately give them up forever, and frequently go exactly into the opposite direction. Such is the fate of a political favorite—admired and caressed for a season, whilst the enthusiasm in his favor lasts—and when it has burnt out, or when he has gone counter to his admirers in the slightest respect—abused and maltreated, as a man without principle, and as an enemy to his country.

Williamsburg, Va.

THE REV. MR. CHAPIN'S ADDRESS.

We have been anxious long since to give place to Mr. Chapin's Anniversary Address, delivered before the Richmond Lyceum in April last, and have only been prevented from doing so by the numerous demands upon our pages. The address itself has lost none of its freshness or importance by delay. It inculcates in singularly felicitous language the great and important truth, that *Intelligence* (by which is meant the clear perception of truth and duty universally diffused,) is *essentially requisite to the prosperity of a nation*. By *prosperity* Mr. Chapin means all that "relates to a nation's progress, happiness, and safety;" and with these definitions it will be found, that he has very conclusively proved his main proposition. Few, however, are willing to contest this great truth in the abstract, for the same has been long since demonstrated by reason, as well as by historical experience. The difficulty lies in carrying out our own convictions into practice, or in cordially uniting for the purpose of establishing and diffusing the only preventives to national decay and dissolution. What boots it that we know of some sovereign specific against contagion, if we madly neglect its use? If universal education, moral and mental, be necessary to perpetuate free government, and men are convinced of the fact, why are our law-makers so listless and indifferent on the subject, or why are the members of society generally so little disposed to make even small sacrifices, to insure so grand a result? The question, perhaps, is not so easily answered; yet we fear that the great prevailing and controlling sin of the present age, is the *desire to grow rich*. Whilst we acknowledge that such a desire, moderately cherished, is beneficial to society, we believe nothing is so pernicious when it becomes inordinate. It deadens all the finer feelings, contracts the social and domestic affections, and extinguishes the spirit of patriotism. We commend Mr. Chapin's address to general perusal. Besides the excellence of its doctrine, it contains many passages of rare beauty and eloquence.—[Editor So. Literary Messenger.

ANNIVERSARY ADDRESS,

Delivered before the Richmond Lyceum, in the Capitol, April 3d, 1839.—By Rev. E. H. Chapin.

Gentlemen of the Richmond Lyceum:

I presume that you have already anticipated, from the occasion, the general strain of remark which I shall employ at this time. The anniversary of an institution like yours, calls for some topic of an intellectual and moral nature, and such, whatever specific grade it may occupy, is the character of the address to which, for a brief portion of time, I request your attention. And here permit me to say, that I feel my own inadequacy to the full accomplishment of the duty required by the present circumstances. Such an opportunity as this, should ever be possessed by the giant and master spirits of the age—the skilful and industrious laborers in the great cause of progress—who are out in the field of humanity, toiling in the sunshine and blessing the shower, removing obstructions, opening the goodly soil and scattering abroad and afar the seeds, we trust, of a rich and glorious harvest for their country. It needs such men as these, who can lay bare all the sinews of a subject, and show its full force and importance; and I feel, therefore, I repeat, my inadequacy to the task now assigned me. I will only premise farther, that I shall advance no novel topic, nor indulge in any startling theory or singular and ingenious argument—content with the fact, that the publication of essential, and, it is to be feared, much-neglected truth, however trite it may be, is better than the exhibition of many finely wrought and beautiful devices.

I lay down, as the motto to my discourse, the broad maxim, that INTELLIGENCE IS ESSENTIALLY REQUISITE TO THE PROSPERITY OF A NATION. I use the term *prosperity* here, in an extensive sense, meaning by it, all that relates to progress, happiness and safety. I presume that no one will dispute this proposition, but that it will be received as a truism. It requires no argument, therefore, to sustain it, or to convince you of its correctness. If it did, our evidence is palpable, and ready to the tongue of every one who has at all reflected upon the subject. We point to the primitive or savage man, surrounded by all the rude circumstances of his condition. He plucks his food from the thick greenwood and the running stream, sleeps beneath a roof of bark, and clothes himself with skins won by his prowess in hunting. Physically, he is perfect. His is the robust frame, the pliant sinew and the stalwart arm. You would readily select him for display in a triumphal procession or a gallant and mighty war-host. He is free, and, doubtless, in many respects happy. But, after all, his happiness is in a great measure, at least, derived from the gratification of the lower faculties of our nature—his freedom is that of the wild beast, and maintained by a strong arm, and a "red right hand." Those wholesome restraints which bind society together, and prevent the disastrous outbreaking of evil passions, and are the safeguards of property and life—those better and inward principles of action, which obtain among other portions of humanity, are in his mode of existence, unknown, or but feebly exercised. Has his cabin been fired by some hostile brand? In the spirit of retaliation, a village smoulders in ruins, and fields are blighted; is his brother murdered to-day?—to-morrow, the avenging weapon quivers in the bosom of the transgressor. But it is unnecessary to specify and to direct your attention to all the revolting evils of superstition and ignorance. You have but to turn your eyes to those lands where knowledge is cultivated and diffused among the people, and you will behold, every where, the benefits of civilization, the supremacy of law, and the blessed sanctity of religion; and you will discover a contrast as marked as that which exists on the physical globe, between that portion where "the day beams" rest, and the hemisphere which sleeps in star-light and in shadow.

But we may illustrate the truth of our proposition better, perhaps, by history. We refer to the middle ages—the dark lapse which intervened from the overthrow of the regal city by the iron-handed Goth, to the dawning of mental splendor and the revival of letters, in the fourteenth century. A period of wide spread and deep seated intellectual and moral torpor was this! The perception and energy of true and spiritual religion were dim and weak—lost in the thick gloom of ignorance, and fettered, in their free impulses, by an all despotic power. The living principle of genius was almost without an oracle upon earth. The home of wisdom was in the past. Her shrines were the tombs of the mighty dead, and her records the chronicles of ancient glory. We do not mean to say that all was darkness. Here and there were orbs of light, burning solitary and far apart in the vast and lonely firmament. There were learned and skilful men, whose nice distinctions in reasoning and subtle metaphysics, were worthy Aristotle, their master. And there was poetry, too,

thrilling through the proud ranks of the brave, and melting in the lays of the Troubadour—flowing where the "bright wine" flowed in the festal hall, and breathed beneath the lattice, or in the bower of beauty.

Physical energy—the zeal and animation which do not depend upon the exercise of the loftiest faculties of mind—were not lacking. A high sense of honor, courage, and a reckless daring, mingled with a romantic fervor of love, were the distinguishing traits of the higher classes of the time. Young men, panting with ador for the golden spurs, cheerfully underwent all the hardships incident to the course of training which secured them, and held wounds and pain as easy conditions to the obtaining of the victor's wreath and the smiles of "Ladye-Love." The bold baron deemed it a glorious end to die, "full knightly in his harness." The gage was but thrown into the ring, and kings moved to the conflict; and a poor hermit lifted up his voice and told of the blessed shrine and the holy sepulchre, and lo! an hundred banners floated to the winds, ten thousand lances flashed in sunshine, and the earth shook beneath the thundering tread of the red-cross warriors—the glory and chivalry of Europe.

But, allow all the intelligence and energy we can to this period, still it must merit the appellation of the *dark or iron age*. Still it rested upon the world, a long, long night, brooding between the illustrious times of antiquity and the glory of a brighter morning. Its starry gleamings, as we have said, were few and far between—or, perhaps, in its earlier or latter watches, the descended orb of the past yet gilded here and there a mountain-peak, or the gray light of the approaching dawn fell dim and uncertainly upon the distant and misty summits. But in the depths, the *depths*!—below, and all abroad, was thick and palpable gloom. The intellect of the great mass, slept in shadow, silent, and almost stagnant, like the doomed waters of the Eastern Sea. In describing any nation or period, we regard its general traits, and fix its character from these. While, then, we remember, that there were men like Erigena, Alfred, Abelard and John of Salisbury, we also remember that such were exceptions, and rare exceptions to the common rule. And we must not forget, moreover, the nature of much of even the wisdom that did exist at that time. It was blended with mysticism, employed on idle questions and in dialectic contests, and moulded to the uses of a subtle and scholastic philosophy. Concerning such men as Scotus and Aquinas, "the most subtle" and "the angelic" doctors, we might, perhaps, appropriately use the language of Milton—they

"——— *Apart sat on a hill retired,*
In thoughts more elevate and reasoned high,
* * * * *
And found no end in wandering mazes lost."

Now these abstractions and chimeras, could have none of those universal and purifying effects which flow from true philosophy. Knowledge, confined to the student's cell, or imprisoned in the dark walls of the cloister, could not move in its own free sphere and shed abroad its healthful and glorious influences. When we call this a dark age, therefore, we speak particularly of the condition of the people—the common people—the everlasting pillars of society. They give the hues and changes to times and nations. The impulses of the

great and the wisdom of the learned, are important, chiefly, as affecting the mass. To *that* the philosopher looks with an interested eye. He may not heed the breezes which rustle among the flowers, or the gushing fountains that sparkle in the sun; but his eye will closely watch the cloud that darkens up the great heavens, and his ear listen continually to the murmurs of the mighty and resistless ocean. He calls it a *revolution* only, when the multitude moves, or is moved—when the bondage of ignorance or the foot of the oppressor falls heavily upon *them*—or when a regenerating spirit goes forth among *their* ranks, and stirs the pulses of the universal heart.

It is unnecessary for me to dwell upon the features of the popular character, during the period of which we are speaking. The light of knowledge being thus feeble and dim, we know, also, that the upper classes were enveloped in darkness and pervaded with many and deep vices; and from their condition we may infer that of the lower orders. If ignorance and immortality prevailed among the lofty and high-born, what could be expected of the serf or villein, separated and bound down by the rigid distinctions of the Feudal System? If it was found necessary to institute an inquiry “whether the officiating clergy could read the Gospels and Epistles correctly,” and if “military exploits were the business, and gross luxury the amusement of the nobles,”* what must have been the situation of the dependants and vassals, the laborers and fighting men, thrall to the service of those whose will was their law, and as it were their life.

Your own knowledge then, and the obvious answer to these questions, will sufficiently exhibit the condition of Europe in the middle ages—the time of combats and ordeals, of relics and legends—and when “in the shadows of universal ignorance, a thousand superstitions, like foul animals of night, were propagated and nourished.”†

Such is the period of history to which we refer in illustration of our proposition. We ask, what was the great cause of this thick and universal darkness? No doubt obscures our answer. It was the declension of knowledge which took place in the latter days of the Roman empire, and which, as we have seen, became almost total at its overthrow—whether we refer that result solely to the hand of the barbarian, or attribute it, in connexion with this cause, to a gradual decay, which makes it not unreasonable to suppose that, in the words of a historian,‡ it would “have been almost equally extinguished if the august throne of the Cæsars had been left to moulder by its intrinsic weakness.” We find, during the closing years of that great power which had shadowed the nations, that science was contemned, art corrupted, study neglected or perverted—a feeble poetry, a barbarous latinity, a prevalence of superstition, and “a general indifference towards the cultivation of letters.” Upon this weakness and dissolution, rushed the barbarian, like a dark torrent—sweeping and trampling down the pride of the ancient time—its statues and shrines, and columns and trophies—overflowing landmarks, revolutionizing customs, abolishing laws, and changing the whole aspect of the western world.

But, upon that gloomy lapse which we have been

Enfield's Hist. Phil.

† Hallam.

‡ Hallam.

contemplating, and of which these things were the causes, there broke, at length, a glorious radiance. And mark what produced the change. As we have before said, the dawn was developed gradually. We find so early as the beginning of the eleventh century, that schools were established in different portions of Europe, and contributed their aid in the coming revival of letters. The orbs of DANTE and PETRARCH still more dispelled the night, sparkling with golden lustre in the clear horizon, and singing and heralding, like morning stars, the beamings of approaching day. But a great cause of this glorious reformation, was the immigration of learned men, from the east. Upon the capture of Constantinople by the Turks, many of these left their country, bearing with them “the Greek fire” to other and desolate altars. From this broke forth a living spirit of enthusiasm in the pursuit of knowledge. Learning found, every where, an asylum among the great, and princes were competitors in the good cause. Old manuscripts were plucked from their dusty hiding places, and obsolete volumes opened to the eager hand of the student. Genius revelled once more among the creations of the past, and strains of wisdom flowed out again in the measures of the Attic tongue. Once more was GREECE a watch-word for intellectual energy, and her temples and hill sides, her mountains and vallies, her great names and her battle-fields, were hallowed by classic recollection. Once more did inspiration catch its breathings at PINDUS, and dreams of the poet-land were fashioned after TEMPE!

But this revolution, glorious as it was, would have been comparatively, of but little importance, and inappropriate to our subject, were it not for the effects which it produced, and the great events connected with it. We discover about this period, a moving among all the elements of society. The darkness of ignorance and the bondage of superstition are dispelled and broken, and forms of light and beauty leap from the vast chaos, like the kindlings of a new creation. The spirit of invention and the hand of skill have been at work—the mariner has a guide on the lonely and heaving deep, and the press, the PRESS has broke forth in its splendor, and its influence is smiting and awakening hearts. The bark of the adventurous navigator has passed “the stormy cape” and found the far shores of Hindostan, and the “*Te Deum*” of “the world-seeking Genoese” has thrilled on the distant breezes of Bahama. There is a murmuring of strength under ancient and deep-set foundations, and a trembling of hoary dynasties. There is a hurtling in the air, of voices answering to voices—and, anon, there go up thunder shouts rending the high concave with their power. And old, gray altars have crumbled, and chains, and mitres and crosiers are passing away, and there is a principle of spiritual energy stirring in the souls of men, that marks it as a great and special era in the history of the race—the rising up of mind from its long sleep of ages!

I am aware, gentlemen, that I have been dwelling upon a point which I presumed, in the commencement, to be superfluous. But we have been contemplating an interesting period in the history of mind, and one which strongly supports our proposition, and in this fact, and the hope that its present exhibition will have a beneficial tendency, I find my excuse for having so long detained you.

I proceed to remark, that in order clearly to establish the truth of our maxim, it is necessary to understand the sense in which we use the term "intelligence." We do not mean by it, then, only a cultivated taste, or a certain state of intellectual excellence. If so, we believe that our maxim might easily be proved false, by a reference to historical facts, or to individual experience. The simple shepherd-races, or the nomadic tribes of the olden time, may have been happier than the dwellers of haughty Babylon, or of Rome in its hour of purple greatness. They felt not the withering corruption which steals upon that nation whose moral restraints are not commensurate to its pomp and physical power, nor the disaffections and convulsions, which rend the bosom of an empire when all the people are not fully and truly enlightened. The refinements of art, or the splendor of intellect, could not bestow upon those mighty kingdoms the loftiest station in the power of human attainment, nor the boon of perpetuity. So with individuals. He whose genius sways the hearts of thousands, and who

"Stoops to touch the loftiest thought,"

may suffer the keen anguish of a mind diseased, and pass away, untimely and in darkness, from the earth.

Allow me, then, to present, under two heads, my definition of intelligence.

In the first place—it is *the clear perception of truth and duty*. That people which is truly intelligent, will possess a due regard for righteous and equitable laws, the rights of property, and the authority of religion. A partial knowledge of some, or of all these, may prove the deceptions cause of overthrow and ruin. The abstract idea of liberty, for instance, without a regard to those just bounds which limit and define it, may produce the dreams of the enthusiast, or the excesses of a mob. That nation which, obtaining a view of freedom, rises up and breaks the fetters that have bound it, may exert a mighty and redeeming influence upon mankind; but when, in its zeal for liberty, it sweeps away wholesome restraints, and uproots all "the ancient landmarks" of society, it presents to the world, the horrid spectacle of a community *lawless and ungoverned*—with anarchy raging in its midst, and blood upon its altars. I select this illustration, and dwell upon it, because I deem it peculiarly appropriate to the present subject. In speaking of the prosperity of a nation, it is needless for me to say, that I have specific reference to our own dear land, and I think that some of the chief evils to be dreaded by us, will spring from the abuse of the principle of liberty. It requires intelligence—"a clear perception of truth and duty"—to prevent and crush them. Without that liberty which we enjoy, no nation can flourish in all its parts; and going upon this truth as an admitted premise and one superfluous to maintain in this country, I merely suggest those cautions which are necessary to the preservation of that freedom, and, consequently, to our national prosperity. A due knowledge of, and a regard to, just restraints, we say, then, are necessary to the existence of liberty; for without these, the subject is not free, but is in bondage to a worse than regal despotism. His property, his life and holiest privileges are not safe, when the supremacy of law binds not the whole and the perception of light is dim and feeble. So, Art may rear its classic temples, and Literature adorn its groves and porches, but if in the heart of the

nation there is no regard to the sanctions of justice, and if it does not throb to all the impulses of duty, it is not a truly intelligent, it possesses not the elements of a prosperous one.

I have spoken of the authority of religion. I refer to the spirit of Christianity, and unhesitatingly proclaim it to be the great conservative principle of society. I am aware that there is a doctrine, certainly as old as the days of Hobbes, and which has, I think, been recently broached among us, that it is for the interest of civil sovereigns and all commonwealths that there should be neither a Deity nor any religion. And it is said to be so, because if there be a Power which is feared more than that of the temporal ruler, the authority which he should maintain is put in peril. But to refute this argument here, would be an act of supererogation. None but the cunning ruler or the tyrant, require such a weapon—he who would chain men to his foot-stool by the bonds of policy, or awe his people by the outstretched and bloody scourge. Go back with it, then, to the earlier and darker ages of the world—to the times of the Loerian law-giver, and the blood-written code of Draco. We say, that the very contrary to this result would be the effect of intelligent action upon the precepts of Christianity. Its teachings direct us to love our neighbors as ourselves—to "Render unto Cæsar the things that are Cæsar's, and to God the things that are God's"—to "obey magistrates," and to "submit to every ordinance of man for the Lord's sake." It throws the eternal authority of its all-binding precepts around the executive power, condemning, it is true, the evil ruler—and who does not?—but protecting him who doeth rightly. The Sovereign of the Universe has delegated authority to men, and he who rules in justice will never find his dictates at war with those of Christianity—for then, he is a medium through which Christianity acts, and the power of the magistrate is but

"—An image of His own."

But religion is a conservative principle of society, moreover, because it has an influence where the civil law cannot operate. The sanctions of the latter cannot remove all the causes of evil, nor produce every form of good. They can guard from the outer and grosser vices—from the more palpable sins—but they cannot go down into the heart, and move upon all the springs of private action, and make pure the motive. This Christianity only, can do; and being capable of doing this, it must be vitally essential to accomplish the ends of all just government, and to secure the real prosperity of a nation. Could we, from the crystal battlements of some near star, overlook the wide earth, wherever we beheld the isles of beauty and the places of light, there is Christianity—there are its precepts and its practices—its shrines and temples.

This great truth should be remembered and acted upon; and, in educating a people, in spreading knowledge abroad, let not an element of true intelligence so essential as an acquaintance with the teachings and requirements of Christianity, be neglected or feebly employed.

Our second definition of intelligence is—*the diffusion of knowledge among all the people*. Although my remarks may be brief upon this point, I would present it as an important feature of this discourse. The perception of truth and duty, must not only be clear to

each individual, but universal, through the mass, or the end desired will not be obtained. Allow that even in this country, the political action of the many is controlled by a few, still, in one way or another, the many must act ere national effects are produced. And besides, if this be the case, it can only be the result of a want of intelligence, and this is, in fact, not a *republic* but an *oligarchy*; and "knowledge," which "is power," being in the hands of a particular class, exerts its legitimate supremacy over those who possess it not. But we will not admit this to be true. We will not admit it to be a fact, that the many are controlled by the few, while we behold in our parliamentary assemblies and our triumphant gatherings of the people, among the most eloquent and zealous and mighty, those whose sinews have been hardened under the breezes of heaven, whose hands are scarred with toil, and their brows marked by the sunshine and the storm. We trust, at least, that it will not be, that Bolingbroke's comparison of "*Dutch travellers*,"* shall apply to the great body of the citizens of this republic. The privileges which they hold, were bought and nourished in too stern a time of peril and of blood, for them to be indifferent or inactive in their behalf—to lightly estimate them, or to suffer them to be wrenched away from their grasp and controlled by others. The regal people! Ages have enwrapped them in darkness, and iron and sandalled feet have trodden them down. They have rested long, unconscious of their power, and chains have been thrown on the slumbering Hellespont. Pampered pride and bloated luxury have wrung their spoils from amid their sweat and tears, and awful tyranny has reared its very throne upon, and crushed them. It is a fearful omnipotence which has slept so long at the foundations of empires, and resisted not even when scourged unto bleeding! And is it not well that they were thus ignorant of their strength, until they had received intellectual light and moral guidance sufficient to show them its proper uses? For, had they risen up, without these restraints, and in the drunkenness of revenge, who will pretend to estimate the results? But, and joyful am I, we live in a brighter age. The great truth has been practised upon, and is *felt* where it is not practised, that government belongs, primarily, to the people, and all the authority of empire springs among and must flow from them, and should be ultimately controlled by them; and no earthly power may, lawfully, pluck this right away. A voice of triumph has gone forth at the uprising and progress of millions, and we present to the eyes of the world, the glorious spectacle of a self-governed people. It is not empty declamation—there is a thrilling and sublime meaning in the announcement—that the dweller of the mountain cabin and of the far corners of the land, has a voice in the councils of the mightiest nation on the globe, and adds his impulse to that power which may deepen its broad foundations and erect the pillars of its future strength. If to the people, then, legitimately belongs the ruling power, the influences which they exert upon our country will secure its good or evil destiny. The character of these influences will depend upon the condition of those from whom they spring. If from an elevated and intelligent community, we may look for happy and blessed effects—if otherwise, it needs no prophet's vision to assure us of

* Vide Letter on the Spirit of Patriotism.

the ill result. These are simple and familiar truths, but none the less important because they are so. They lay the whole matter plainly before us. The prosperity of our country depends upon the good influences exerted by the people. Those good influences depend upon the universal diffusion of intelligence. Therefore, the prosperity of our country depends upon the universal diffusion of intelligence.

Such is the importance of the extension of knowledge to all the people—and therefore do we include it in our definition of intelligence. We admit that there may be nations, the names of which have descended with immortal lustre to succeeding ages, on account of their high intellectual eminence, and yet who have not prospered, but have perished and gone down from among the living forever; but we shall find in such instances, that intelligence was only the possession of a few, and that their renown is composed, not of the glory which flows from the whole enlightened mass, but which sparkles from bright and individual orbs, scattered here and there. These sinking below the horizon, there were no fountains of light kindling among the people—no conservative and redeeming power dwelling in the hearts of the crushed and darkened million—and so the mighty fabrics crumbled upon their basis, and were swept away by the hand of the destroyer.

Our definition of intelligence, then, is this—*The clear perception of truth and duty and the universal diffusion of this perception*; and this, we think, supporting the essential truth of the proposition, will, also, refute all the objections which may be made to its general application. The anarchist and disorganiser on the one hand, and the monarchist or despot on the other, can draw no argument, if this be true, to support their claims. They cannot argue in this respect, from the past to the future. We grant, that in casting our eyes over the history of the world, we witness strange anomalies. In one portion, we see hope and virtue and justice, crushed by brute force and trampled upon for ages;—and in another, we behold men, when arising from their bondage, equally regardless of the right, indiscriminately mingling the blood of the innocent female with that of the cruel tyrant, firing the cottage with the palace, and overturning at the same blow the throne and the altar. We grant all this—but we say, that these very effects have resulted from the want of true and wide spread intelligence, and thus our argument gathers strength from these very instances. Scatter this knowledge abroad—implant it deep, and cherish it—and you will witness its blessed fruit. It may be a silent and invisible influence, but it is mighty, nevertheless; and you shall see nations, like the planets above us, swayed by a powerful although an imperceptible principle—moving in obedience to its hidden dictates, solemnly and majestically, beautiful in their harmony, and rejoicing in the brightness of their glory.

But it is time that I should apply these remarks. As I have already said, and as you have perceived, I refer them directly to our own country. We would say, then, that the truth under consideration is an important one; but no principle, unless acted upon, can be of any benefit to us. I desire, therefore, that our countrymen should not only believe what has been said, and is so well known, but that they should employ it, and carry out its dictates practically.

We live in a land, that, I trust, is to be made the theatre of events more glorious and blessed for humanity than all that has been done by illustrious and by-gone empires. I trust that the words of Berkely may prove prophetic—that

"Time's noblest empire is its last"

Certain it is that we shall not perish, if we perish at all, without accomplishing some mighty result, which shall designate our name as good or evil on the pages of history. We shall not go down thus early from the world, with the lustre of only one great event to rescue our memory from oblivion. These vast elements which move around us—this great machinery of physical power and thought and action—*must* in its operations, produce some important end—*must* yet accomplish a work of terror or of triumph. The result will be according to the use which we make of the powerful means within our grasp—an untimely end, from the darkness of which no memory of early greatness can redeem us, or a glorious eminence upon which the shadows of oblivion shall never fall, and whence shall go out our influences over the wide earth, to bless and to gladden it.

There is a broad distinction between America and the nations of the old world. They have their records of antiquity—their dusty archives and crumbling monuments—from which to draw their immortality and establish their renown. Even should they achieve no more, or ignobly fall, the lights that are burning upon ancient shrines and by honored tombs, would shed an imperishable splendor upon their ruins. But America has yet to create her character; and great are the responsibilities that rest upon her, and critical the trial through which she must pass. She has had none of the weaknesses of barbarism or the imperfections of infancy to undergo. She leaped, mature and panoplied, from the teeming brain of her progenitor. She sprang into being when the night of dark ages had passed away, and the beamings of intellect and of moral excellence were around her. She has not these excuses, therefore, for her errors, and many of her sins will be against knowledge. We have said that she has no monuments. We should have said that she *has* monuments—but, unlike those of older nations, if she falls darkly, they will but add to her reproach, and become the objects of mockery to others. They were reared and consecrated by our fathers, as pillars of republican greatness and goals from which their sons should press onward—but now, if we sink or retrograde, we disgrace their trust, and leave these precious legacies to stand as mementoes of unsuccessful experiment.

How zealously, then, avoiding all appearances of evil, should we employ those means which will conspire to our prosperity and future eminence! How narrowly should we scrutinize our situation, eradicating the germs of evil, and scattering every where the seeds of good! If we would do thus, let us endeavor by every lawful method to diffuse true intelligence among all the people. The reasons for doing thus have already been presented—the means by which we may accomplish the object are simple and practicable. Let me say here, that I do not suppose we shall ever be able to create a nation of geniuses, or to cultivate in every mind the principles of a refined taste. To suppose this, would be to suppose a change in the nature of things; and besides, it answers not to the definition which I have

given of true intelligence. The result which we would see accomplished, is a nation of usefully enlightened and common-sense people, acquainted with the great truths of history and nature and revelation, and acting upon their knowledge. And to produce this effect, we say, is easy and practicable. Allow me to glance slightly at some of the means.

And, in the first place, I would mention the establishment of some system of school-education, which should be for the benefit, not only of the rich and the able, but the poor and necessitous. Indeed, the instruction of the latter should be its principal object, for the former have always the means and the opportunity requisite to the purpose. The child of every free citizen, should have an education sufficient to qualify him for all the duties which it will be incumbent on him to perform in after life, as a man and an American. The contributions of the wealthy and the influence of the powerful, can scarcely be better employed than in promoting an object so honorable and important to their country. The high tone of morals which pervades those portions where such a system is in operation, is a sufficient proof of their efficacy. I would have the knowledge imparted in this manner, such as I have already defined intelligence to be—a clear perception of truth and duty. Beside the influence which it would exert upon the prosperity of the country, I would have, as an exhibition of the genius of republicanism, the child of the poor and obscure man—of the war-worn veteran, perhaps, or the brave defender of his country—stand up and hold his chance with the opulent and the mighty. And, as connected with this point, I would mention here the vast importance of bestowing religious information upon the poorer and more destitute classes. This is necessary for all classes—we have shown it to be so—but we speak now especially of those who have scarcely any or no religious advantages—who are found in almost every part of our land, and particularly in the purlieus of our large cities—and whose years are spent in ignorance, their Sabbaths in riot, and their whole lives in vice and crime, or, at least, with but faint gleamings of the knowledge of christian precept and duty. It needs such spirits as RAIKES to go among these, and bring them under the influence of religion and morality. This mass will not be inactive. It will put forth a certain power, and a power which will be felt, too, through the nation; and it depends much upon the patriotic and the liberal, whether there shall go forth from it the tenants of our prisons and our penitentiaries—pollution and guilt to darken and to blight—or a blessed influence, which shall purify and refresh the obscure places of society.

Public libraries, are another means of diffusing intelligence, to which I would direct your attention. Let these be established in every community sufficiently large to warrant their support. The benefit arising from a popular access, under certain regulations, to a collection of useful reading matter, you will readily perceive. Instruction will thus be placed in the reach of every one, which cannot be easily obtained in any other manner. Associations can afford to purchase valuable works and a quantity of books, which most individuals are not able to do, and thus, from personal contributions, a fund is created capable of gratifying the wants and tastes of those, who else, from want of

opportunity or limited means, would be deprived of much pleasure and improvement. But, besides, by this means we may pour light upon distant and future generations. It is well for us to commence storing up the knowledge of our day for those who shall come after us. Our libraries may become the receptacles of our contemporary literature, and preserve much, which, although at present well known or but little regarded, may be of value and importance in other ages. Every reader knows the costliness and rarity of the productions of two or three centuries back, and of some of the noblest works of genius, and will be willing to grant a boon to posterity which has been denied to him. We need not fear that the hand of barbarian ignorance, or the violence of an Omar, will destroy our literary treasures. They will prove sources of instruction in our day and generation, and stand through all coming time, among our proudest monuments and better than all the trophies of victorious battle.

Again—as important aids in the diffusion of intelligence, I would mention lyceums and debating societies. I view as a cheering omen, the rapid springing up of these associations, within these few years, in different parts of our country. I so view it, because it indicates that there is abroad a thirst for useful information, which seeks these establishments as the means of its gratification. I so view it, moreover, because a happy influence is exerted upon that important portion of community, *young men*, and we may thus hope that its effects will be carried out into the most active and busy scenes of life. An enlargement upon all the advantages and benefits of these societies, would, of itself, form a subject for a lecture, and a very appropriate one upon an occasion like this. We might show you the profitable employment of time, else wasted in folly, and possibly dissipation—and of money otherwise spent idly, and perhaps hurtfully. We might show the benefit accruing to the diffident and the backward, who may there exercise and acquire confidence in those abilities with which they are now too modest to appear in a wider arena, or gain that information, of which, from unfavorable circumstances, they have heretofore been deprived. We are aware that some may sneer at these associations as puerile and trifling, and we are happy that they are placed beyond and above the necessity of such means of improvement as they afford. For our part, we deem them well advanced who are so. We believe that grave Wisdom, and profound Learning, may mingle in the exercises of the lyceum and the debating society with profit. We allow that they may be so conducted as to be trifling and puerile, but we deny that they necessarily are so, and require evidence ere we can believe that this is generally the case. Why may they not hold an elevated and manly character? Must profound problems of natural science be discussed only in a philosophical society? Must stern and sober questions be agitated solely in the legislative hall or on the floors of congress? Are not these, and similar subjects, of interest and importance out of these places, to which they are considered as especially appropriate? The power of thinking and of reasoning for ourselves, and of expressing our opinion readily upon any subject, is an acquirement so valuable, that every one should strive to attain it, and he is verily guilty who neglects the means of doing this when they are in his reach.

Knowledge is open to all at the present day—there are no robed teachers to whom are committed solely the mysteries of learning—her portals unclose at our touch—we can enter. We need seek at the shrine of no oracle—the inmost penetralia of wisdom are accessible by our own endeavors. There are fountains of intelligence gushing from a thousand sources, and we may freely quaff. There are treasures beneath the soil, and if we will diligently search for them, we shall bring them up, flashing to the sunlight. We are not obliged to follow blindly in the path which others have marked out, but we may carry the torch ourselves if we will, and first and foremost, we may explore the dark, the intricate and the untrodden. All visible things are ready for our investigation. The laws of mind and of matter, with all their interesting and important truths, are open before us. We may be called a nation of debaters, and we are so, from the very circumstances of our free institutions. He who would keep pace with the times, then, must be studious, vigilant and active. A man is not now, like the *athlete* of old, distinguished by his physical superiority—by his speed in the race, his power in the pugilistic combat, his precision in guiding the chariot steeds, or his skill in hurling the swift javelin—but he has a part to perform in the intellectual arena, if he would come out from oblivion, if he would become even an acting portion of the age, and well should he be girded and prepared for the task. That mighty weapon, reason, should be ever ready and bright in his hands, and he should exercise and inure himself to the conflict of mind with mind. And where, we ask, can he better do this, than in the debating society? Where can we better tutor those powers which we must use when we go out into the world, or keep them in order and ready for action, when, for a time, we have retired from its busy strife? Far, then, from being necessarily puerile and trifling, are the lyceum and the debating society. We, on the contrary, rejoice in their prosperity. We hope that they may be established, and many of them, in every community, according to its numbers. We wish moreover, that the sex of More and Hemans and Sigourney and Sedgwick, would lend their encouragement to these associations, not only by their presence, but by their contributions to the treasures of knowledge. Something would be added to the refinement of these assemblies, and perhaps somewhat of the stormy passion of rough debate would be allayed. I look upon these associations, then, as being important mediums for the diffusion of intelligence, as a great means of instruction—of checking the tide of dissipation—of giving the truth to the young and the power of its defence—of raising up a generation worthy of America;—may I not add, of training the immortal for immortality!

Thus have I presented some of the means of extending to the people a “clear perception of truth and duty,” and you all will see that they are simple and practicable. I am aware that they are not *new* means, but those which have been long established and widely extended. Still, I wish to see them employed every where, and until they are, I shall deem it proper to recommend them and urge their importance and necessity. It is certain that there are many who have not been brought under their influences, and moreover, there are many of these which are weak and languishing and struggling with difficulties, when it is in the power of our

citizens to stretch forth a helping and invigorating hand. I trust that the talented and the wealthy will act upon this matter—let them consider the importance of these objects, the evident and powerful influence which they may have upon the prosperity of the nation, and let them, as patriots, by all means, encourage and foster them.

Ours is a land to be proud of. Even to look upon its physical grandeur—the features which it has borne from the creation—its crowned mountains and its sheeted cataracts—its sunlit hill tops, and its glorious valleys—its rocks of eternal strength, and its clear-flowing waters—even to look upon these, we say, we may well be proud. And when we call up its thrilling memories—its records of brave hearts and strong arms and noble minds—when we remember its old monuments of battle, the prayers of its pilgrims, and the ashes of its mighty ones—do we not feel the truth and beauty of the sentiment

“Dulce et decorum est pro patria mori?”

And who can wonder that the patriot has died for it, on its high places—and that the returning exile, stretching out his arms and viewing its shores through gushing tears, has exclaimed in the broken accents of sobbing joy—

“This is my own, my native land?”

And can we wonder that, with all these natural advantages and the incitement of such examples, a spirit of enterprise has been awakened and is stirring mightily among us? Its workings are all around us. It has conquered in realms that the Roman never shadowed with his eagles, and left where it has been, trophies more glorious and durable than the hoary monuments of Egypt. It has spanned, with its everlasting arches, the deep and broad abyss, making there a level and beaten track, and opened channels of intercourse through the bosom of the riven rock. It has made the wide and boisterous ocean to be as a gentle stream, and cleft, even through “the illimitable air,” a pathway to the stars. It has created scenes more beautiful than the dreams of the ancient time, or than ever glided before the glistening eye of a poet. Distant regions, but yesterday the abodes of the prowling wild fox and his red hunter, now smile with pleasant hamlets—their streams reflect the insignia of commerce, and their hill-sides “echo to the song of the reaper.” It has spoken in solitude, and lo! an hundred voices have answered there. It has looked upon the forests of a thousand years, and they have passed away like visions; while glittering marts, sacred fane and shining pinnacles, have risen in their stead. And then, its plumed harvests nodding and brightening on all our hills—its towering masts bristling in all our ports—its hum of universal business—its cheering sounds of toil—its clangor and roar of machinery, and all its tumult and its triumph! Amid all these operations, it moves, as it were the life-blood, preserving and animating and quickening the beatings of the mighty heart.

This same liberal and indefatigable spirit, we would have exerted in the great cause of diffusing light and knowledge. We would have it work out results still more honorable and blessed for our country, by raising it to that intellectual and moral eminence which it is so well fitted to adorn. We would have these same

expansive hearts and strong hands, which are working such magical changes in the physical condition of our land, employ their energies in aiding the poor and cheering on the young in their efforts after knowledge and improvement. We do not wish our country to possess crowns, or to hold the sceptres of nations; but wish her to sway hearts by the mighty influences of freedom and intelligence. It was for this, we trust, that she was raised up in these later times—to afford the world an example of what a republic *can* be, and to send forth in other ages and other lands, a power to regenerate and to bless. We would have the words of Milton be as a prophecy, to which she shall answer as the accomplishment—“Methinks,” says he, “I see in my mind a noble and puissant nation rousing herself like a strong man after sleep, and shaking her invincible locks: methinks I see her as an eagle muing her mighty youth, and kindling her undazzled eyes at the full mid-day beam; purging and unscaling her long abused sight at the fountain itself of heavenly radiance; while the whole noise of timorous and flocking birds, with those also that love the twilight, flutter about, amazed, at what she means, and in their envious gabble would prognosticate a year of sects and schisms.”*

Gentlemen of the Richmond Lyceum—I have already, I fear, trespassed too long upon your patience. My remarks in conclusion will, therefore, be brief. Permit me to offer you a few words of congratulation and of precept. I rejoice with you, upon this your second anniversary, that you have been able thus far to succeed in your laudable and important object. I am glad to know, that within the past year, you have been able to establish an aid to your endeavors so valuable as a well selected library. I am cheered, also, with the hope, that the efforts of those of your number who have enlisted in the attempt to furnish the public with a monthly journal devoted to the cause of lyceums and debating societies, will prove successful; and that the liberal and the enlightened will, by their pecuniary and their mental contributions, assist in placing it upon a permanent foundation, where it will prove worthy of patronage, and be the agent of much and lasting good. I bid ye go on, gentlemen, in all your good works. I trust that you will not suffer the clouds of a few adversities, or the vexations of an hour, to prevent your vigilant, unwearied and triumphant action, in a cause so glorious as that of acquiring and diffusing intelligence. There is no portion of our country from which a blessed influence upon its prosperity can more appropriately arise, than from this. Here were the kindlings of its young liberty fanned into a flame, and hence should go forth that which will constitute its prosperity and the lustre of its immortality. Monuments of glory and of honor are here. Graves that hallow the soil and that distant nations speak of with reverence. Legends of liberty told by its haunted stream-sides, and songs of patriotism sung by all its clear and hospitable hearth-fires. Here, also, among these hallowed tombs, and amid the breathing of departed intellect, here may you and all succeeding generations, rear up rich trophies of mental and moral greatness; and may it be known in history, that those whose fathers fought and bled among the earliest for

* Speech for the liberty of unlicensed printing.

their country's freedom, were of the first to erect the columns of its strength and to deepen its imperishable foundations.

A few words farther, and I close. I have spoken of the important place which Christianity holds, as a portion of true intelligence. Gentlemen, I commend it especially to you again. You may scan the broad and legible heavens and the mysterious depths of earth—you may search skillfully among the relics of ancient lore and "drink deep" of "the Pierian spring." You may gather knowledge from all the sources of human learning. And I would have you, if possible, do so. But I wish to press upon you the injunction, not to neglect the BIBLE, amid all these studies. Mere uninspired knowledge will be mingled, more or less, with earthly frailties and human passions. But inspiration flows forth, untainted in its purity and reflecting only images of heavenly beauty, fast, fast from the throne of God. Even were it before you only as a model for *intellectual* improvement, it possesses powerful claims upon your attention. Would you have eloquence? There it is, breathing from lips that have been touched with sacred fire. Would you find lofty poetry? There it is, like that which the angels know, and to which the morning stars sang together. Would you learn lessons of practical or judicial wisdom? They are there, deep, strong and convincing. But it is not for such things only that you hold the Bible in your hands. You know that it makes appeal to the inward and spiritual powers, and see to it, I beseech you, that its appeals are regarded and known and practised upon. The soul, without principles of moral and religious action, even if it should reach (and we do not say that it can,) all unguided by its better nature, a mighty energy and a broad expansion of intellectual power, would be a wild, a chainless and a dangerous thing—wandering forth, like some terrible principle in nature, not bound into the fixed paths of the planets, or subject to any known law of order, threatening to commingle and crush worlds; or like the eagle, who, while soaring to the orb of day, with glory in his eye and sunlight on his wing, is lost amid stormy clouds, and beaten about by resistless and adverse tempests.

May you practice, gentlemen, upon these truths—thus assuring to yourselves pure knowledge and real benefit—and may the influence exerted by your society and kindred associations, do much in causing the dwellers of the future to know, not by the sad experience of its absence, but by feeling it around them as their air and very life, that INTELLIGENCE IS ESSENTIALLY REQUISITE TO THE PROSPERITY OF A NATION.

DEVOTION.

Why do men feel more devout, when their hearts are filled with deep emotions—when their minds are raised (as it were) from earth, by solemn music or the sublime and beautiful—but that their minds are then most fit to hold communion with the Deity, for nothing that is vile or base can then have place in them. In both deep joy and deep grief, the mind turns involuntarily to its Creator. And it appears to me that gratitude to him is almost an essential part, or at least an almost invariable concomitant of intense joy. c.

TWILIGHT FANCIES.

The twilight hour,
With mystic power,
Is stealing o'er earth and heaven;
And treasur'd lays
Of other days
Float on the breath of even.

The mirth and glee
And minstrelsy,
Of childhood's early morn,
Trill on the ear,
As loud and clear
The mingling shouts are borne.

From girlhood's bower
Each opening flower
A note of love is sighing;
Their petals pale
Tell sorrow's tale—
Their stems are prostrate lying.

But there's a spell
Hath power to quell
Each echo from the past;
To bid the breast
Enfranchis'd rest,
And whisper peace at last.

That spell is thine,
And worlds thy shrine,
Imagination fair!
Thy spirit springs,
On venturous wings,
High in the realms of air.

Each glitt'ring star,
That shines afar,
But paves thy grand highway;
While quiet nooks
And murmuring brooks
Still tempt thy feet to stray.

By tangled dell,
O'er rock and fell,
Thy hor'ring form is seen;
'Neath ocean's wave,
In mermaid's cave,
Thy gorgeous couch hath been.

When Ætna's fire,
In flaming ire,
Doth deluge the mountain's side;
What joy to dip
Thy thirsty lip
In the whelming torrent's tide.

Then come to me;
Thy tracery
Is woven round my heart;
Make me but thine,
Be thou but mine,
And let all else depart.

Limb shall not fail,
Nor spirit quail—
We'll range o'er earth and sea;
The stars of night
Shall guide our flight,
And morn sing jubilee.

The compact done,
The guerdon won,
I bid each fear depart;
Thy voice of love,
Shall even prove
A styptic for the heart.

Fort Edward, Washington County, N. Y.

CERTRUDE.

AMRAM;

THE SEEKER OF OBLIVION.

BEING A FRAGMENT FROM AN UNPUBLISHED MS.

There are more things in heaven and earth, Horatio,
Than are dreamt of in your philosophy. *Hamlet.*

Reader—if perchance I be so fortunate as to have one—I know no law which can compel me to declare from what Persian manuscript I deciphered the following tale; though I, no doubt, could amuse many, and flatter my own vanity, by displaying much ingenuity in forging and explaining some dark mystery which might furnish the desired information. From my unwillingness to tell the whole truth, kind reader, you may suspect the Persian origin of my story. Keep your suspicions, by all means, if they benefit you, but allow me also to keep my secret. After having learnt all this in relation to the original manuscript, you may perhaps wish to be informed unto whom the tale is told; and here I may be more communicative without endangering my veracity. Loquitur Amram—you could have found that out by your own research—but not that the Prince Aboun Hassein, unto whom Amram addresses his discourse, is a young and misanthropic traveller, of royal birth, with whom you and I, fair reader, may seek more acquaintance hereafter. But, lest I lift the veil too high, let me now introduce you.

Great Prince—the remembrance of the past rises on my soul like the sun on the sandy deserts of Araby. The light which it affords discloses but a blighted and a sterile region, where if the semblance of joy ever appeared, it was but a mirage*(1) which attracted for a time, but whose unreal nature was detected by a nearer approach. Perchance the relation of my sorrows is painful to me, for time has traced deep furrows on my heart, though he has left my brow without a wrinkle; yet my lord Aboun Hassein has commanded, and his servant will obey—and if for a moment my narrative substitute in your bosom the warm feelings of sympathy for the morbid phantasies of misanthropy, the pleasure of success will fall on my soul lightly and sweetly, as did the manna on the plains of the South, to satisfy the cravings of the disciples of Moussa.(2)

* For notes see the end of the article.

I was born in the neighborhood of Sham el Demes-hy,(3) that region of undying spring, which our Holy Prophet has declared to be the loveliest of all terrestrial paradises. Every where is the ground covered with a velvet grass—green as the turban of an Emir(4)—soft as the fleeces of Angora.(5) Every where is it spangled with the brightest and most fragrant of flowers, while o'er the thousand brooks that intersect the beautiful valley, the tall dates and pomegranates wave their graceful foliage. The air is oppressed with the sweetest of perfumes—the skies are flushed with the softest and richest of colors, and the maids of that clime are fair as the roses they sigh over—tuneful as the bulbuls they listen to. I have wandered over many lands—I have seen far countries—but still to me that spot seems the eye of the universe, and the vale of Demeshk stands unrivalled in my heart. Even now, while speaking, I am hurried back on the wings of memory to that home of my youth, and in fancy I stray through its vineyards and olive groves, drinking in the cool evening breeze, when it returns faint and weary from its pilgrimage over earth and over sea. Yet there are sorrows connected even with that garden of delights, and though seen in the distance and mellowed into less repulsive shades, they still cast a gloom over my spirits when recalled unto my mind. With the melancholy, however, a sad pleasure is mingled; and I still feel what in every country is acknowledged, that a charm encircles the home of our childhood, which time may deaden but not destroy. And from the myriad woes of life I have turned for consolation to those scenes of my early days—those hours of gladness, when my spirits were too buoyant to admit of that reflection which is the parent of all misery.

But I must proceed with my story. From age to age, my ancestors had devoted themselves to the reading of the stars and to the study of mystic lore.(6) The secrets which they discovered were handed down by each dying father as the most valuable legacy to his son, and the son treasured them as an heirloom which should descend to his remotest posterity. But the knowledge that my own parent attained, far transcended that of his predecessors, whose dark and magic scrolls had been but lamps for the direction of his course. His secrets were such as almost to compel the elements to obedience, and to exact from the genii the homage of fealty. It might be that these dark studies ruined his health, or that some too daring experiment was attended with fatal consequences, for he perished by some strange and sudden death ere my early age could be conscious of the greatness of my loss. Before his departure, however, he had dipped me in the waters of youth, brought from the extreme East,(7) and bound by a fearful oath a powerful Peri, to protect me in all danger and difficulty. In his last moments he consigned me to the care of his friend, the wise Ishmael; and as a recompense for the trouble he might undergo, he presented him with those mystic volumes which he so much valued himself, and which he well knew would advance my new protector to the most dazzling height in those studies whereunto his heart was devoted.

Moon after moon replenished her lamp—year after year rolled on, while I lived with my good guardian. I was educated after the fashion of princes, (for the rank of my father was noble among the noblest,) and after

having perfected myself in the use of arms and in all those accomplishments which add grace and dignity to courts, the sage Ishmael initiated me into the mysteries of his own much loved study. Oft have I passed the live long night with him drawing dread combinations from the stars, to charm the elements and to make nature subservient to his will—or gazing intently on the thrice-heated furnace, as we essayed to extract the virgin gold from the worthless dross, and not unfrequently attempting to discover the elixir of life, which for so many ages has eluded the researches of the wise. Oft-times too would we seek the refreshing coolness of the grove, and reclining under the wide spreading chenar trees, by the banks of my own Baradee,(8) I would listen to my guardian's remarks on the sages of old, or be amazed as I heard the cabalistic spells with which Soleyman ben Donad(9) is said to have routed the rebellious armies of Heaven. Frequently he would explain those unhallowed creeds which had held in darkness the deluded minds of men before the visitation of our prophet, and becoming excited by the fervor of his faith, he would picture the unconceivable perfections of the paradise of the righteous, and dilate upon the beauty of those houries who await with sweet sounding zitars(10) the admittance of the faithful into the gemmed and marbled courts of eternal bliss.

Though, by the nature of my studies, separated from the youth of my own age, yet was I not altogether alone, for the daughter of the Hakem was my constant companion. Together we received the instructions of her father, and hand in hand we strolled along the dancing streams, which, like veins, course through the vale of Demeshk, giving new vigor to the flowers of the earth, and adding beauty to the scene. Ever as the sun went down we sought the grove of chenar trees,(11) for it concealed a lovely bower, enlaced with the honeysuckle and the vine, the jessamine and the rose—where we would sit and recount the wild sweet tales of former times—those enchanting stories with which the Sultana Scheherazade(12) is said to have lulled the jealousy of her lord. Year after year did we live after this manner, each ever rejoicing in the society of the other; but as revolving years brought a darker tinge to my cheek, and boyhood gave place to maturer age, I could no longer view with the same feelings the ripening beauties of the fair Zobeide. From brotherly affection I passed to intensest love, and my adored one was persuaded without much oratory of the sincerity of my attachment, and confessed that the affection was reciprocal. Oh my loved Zobeide, even now can I fancy I see before me thine incomparable beauties—the unnumbered charms of my peerless one—her face beams on my soul, bright as the eye of the morning to the tempest tost—her cheek is soft as the velvet-mosses of Demeshk—crimsoned like the blush of the budding rose. She is tall and graceful as the cedar of Lebanon,(13) when its leaves are shaken by the winds of the summer—her step is light as the roe on the mountains—her feet white as the marble of Shirameen.(14) Her soul is as the finest mirror, reflecting every image presented to it, untainted in its purity—her voice is musical as the harp over whose chords the genii of the breezes play, and often has it sounded on my ear melodious as the dulcet murmurs of distant waters to the traveller of the burning desert. But pardon me, great

Prince; to you this description may be tedious; but in the pleasure I experienced, as I recalled the charms of my much loved—my long lost—my faultless Zobeide, I forgot unto whom I was relating the story of my misfortunes.

The full moon was to be the signal for rejoicing—the night appointed for the consummation of our happiness—and on that eve my dark haired Zobeide was to become the bride of Amram. But as the moon shines brightest when farthest from the sun that gives light unto her, so was I farthest from the reality of bliss, when my prospects seemed brightest. But how shall I speak of my sorrows? Again my heart suffers all the dreadful pangs which then it suffered—my fair one was lost. On the eve preceding that appointed for our nuptials she disappeared, and left no clue to extricate me from the labyrinth(15) of my fears. I was altogether unable to discover whither or by what means she had departed; but the suddenness and the secrecy of her flight, made me suppose it effected by the violence of others. The excess of joy immediately gave place to a lonely and blighting feeling, which nestled around my heart and spread over my soul a cold and deadly sickness—for the uncertainty in which I was left opened the way to the most painful conjectures. Oh, prince! if you have ever loved with the intensity of affection, you may conceive the anguish which I then endured; my joys had been bright as the radiations of the hill of Emerald,(16) but it was now torn with throes more violent than those which convulse the base of that famous mountain.

To the memory of my Zobeide I erected a cenotaph; around it I planted the cypress and the yew, and with my own hands I tended the painted flowers that sprung lightly from that fancied grave. Here I spent whole days dreaming of the lost one—refusing all consolation, though many endeavored in kindness to administer to my wounded soul—but the sadness of my heart could know no solace; and the only occupation of which my palsied mind was capable, consisted in conjuring up all the sweet memories of the past and giving them an ideal body to perpetuate the charms of my own Zobeide. Three times had the round moon hung her bright lamp in the mid vault of Heaven—a faint type of that wild mystery of the far East—the incarnations of Brahma—but still my grief was unabated, and her resplendent glory bestowed no peace on the anguish of my soul.

About this time, the old Hakem seeing how vain were the attempts of others to console me, himself addressed me: "Son," he said, "your grief is unmanly—tears and long lamentations are for women,(17) but we who are men and born for action, must have our feelings of sterner mould. I have lost a daughter—you a bride. Is your loss to be compared to mine? I have watched over her in love and expectation, from the earliest hours of her infancy. You have loved her only in her bloom. Into my heart she has grown, as the solitary plant on the high mountains strikes deep its roots into the rock. To you she has been but as the flower plucked in the garden, for its beauty, to adorn or delight while its beauty and fragrance remain." "Venerable father," I replied, "your words are full of wisdom—but when the feelings are grieved, the head may assent to a truth which the heart rejects—there are none whom I

may love with the same fervor of attachment as the fair Zobeide. She is gone, and with her all hope of happiness has flown from my bosom." "So you deem now; but you little know the mutability of the heart of man when you call your sorrow ineradicable; but if this grief long continue, I may regret having violated the customs of the country in the treatment of my daughter. But for years I was alone. I pursued studies, in which my dark-haired beauty was my only companion. When I received you into the house, I had too long allowed her the control of her actions then to check them; yet I may look back with regret on the joys of former times, if bought by the present misery of Amram."

"Father, it were unjust—for though my soul be dark with clouds, know that the only alleviation of my sorrow is the remembrance of the past, and the consciousness of once having had happiness within my reach."

"Not happiness, my son—when the thin hair turns gray on your aged head, you will learn that unto none has Allah granted a state of bliss.(18.) Remember the persecutions of our Holy Prophet before he established the light of the faith; and think of the difficulties that opposed the course of the great Soleyman ben Donad, and forget not, my son, that though surrounded with learning, power, wealth, and honor, he remained not in the true belief, for which he is now cursed with the burning heart in the Halls of Eblis."(19.)

"Perchance thou sayest sooth—but my dreams of happiness were so vivid that they have begotten a belief in its possibility."(20.)

"Ah, my Amram, fancy ever is the deceiver of youth. Your visions of bliss are as bright and as false as those evening hues which gild the dark clouds of Heaven."

Another month passed on—day after day bore witness to the sincerity of my grief—but at length my heart was petrified by its continuance. An icy chill came over me. I was listless and almost unconscious. The lengthened monotony of woe had paralyzed my senses. My limbs refused their due and wonted assistance. My eye became vacant—my intellect inert. In vain I endeavored to shake off this lethargy. Neither the powers of my body nor the faculties of my mind were subservient to the dictates of my will. Every day I grew weaker—and as my weakness increased, a fever seized on me. My eye, from being filmy, became wild and bloodshot. A tingling sensation ran through all my nerves; and as the live blood danced in my veins, a throbbing pain convulsed my body. My head became light—my brain swum—I knew no more, for I was delirious.

My eyes opened, but they were blinded with the light to which they had been so long unaccustomed. With pain I raised my thin translucent hands to shade them. I closed my eyes and pressed my forehead;—it was cold—but an agonizing throb shot through my temples. A cool sponge was applied to them, which afforded such relief that I deemed myself transported to some other world. A melon was introduced into my mouth, to the parched roof of which my swollen tongue had before cleaved. The still tranquillity of delight relaxed my nerves, and I had but strength to open my eyes for a few short moments, to behold him who thus tended me. He was an old man—his face seemed known

to me, and the mildness of his kind blue eye beamed on me like the memories of the past. I fell into a slumber—sweet visions visited my sleep. I was seated among the chenar trees, with a fair one by my side, whose exceeding loveliness outshone those beauties which inspired the honied verses of Hafiz. Around her head was a coronet of the loveliest flowers; but the lily was shamed by the marble whiteness of her brow, and the rose blushed a deeper dye to see itself rivalled by the carnation of her cheek. Her eyes were soft and shining as the stars seen in the deep waters of the Green Sea;(21) and as her head rested on my bosom, they were upturned to mine, as if she would there read a transcript of her own feelings. Her hand rested within mine. I would cast my eyes on the smiling landscape, then turn them to that sunny face, to convince of the reality of that which I beheld. As I thus repeated my gaze, it assumed the likeness of one I thought I had seen before. I pressed my hands upon my eyes—then looked again—but my gaze fell only on the jasmine that hung before my lattice in the graceful festoons that Nature's hand had given it—my charmer was gone—it had been only a dream.

Again I slumbered—for I had not the power of remaining awake. I lay by a sweet rill, whose murmuring was soothing to my languid ear. The citron trees waved over me, shaking on every breeze the perfumes of their blossoming branches. The birds warbled their blithest notes—but to my ear there came a sweeter melody; it was faint at first, for it was borne on the blast from a distance; gradually it came nearer, and the liquid sounds rung in the listening air—it was celestial harmony. My tranced senses were drowned in that sea of music—still I lent an attentive ear, and methought my pulses were attuned to past delights. The musician approached me. She was all beauty. Her eye dark and languishing as the gazelle's.(22) Her breath perfumed as the breeze that issues from the throne of Allah. I looked but once on her who had so enchanted me—yet the love seemed no new feeling. I looked again—and again it was a dream.

I tried to recall the visions of my sleep, but slumber again overtook me. I was moving in an atmosphere of sweet sounds, which rose and fell wildly, like the modulations of a rising storm. Perfumes floated around, but I fainted not even with the ecstasy; neither was I overpowered by excess of sweetness, for a strange and unfelt power sustained me. I was not alone, for with me was one whose brightness surpassed the meridian splendor of the unclouded sun—yet my eye quailed not, for her beauty was mellowed by supernatural softness. Her figure(23) was the impress of perfection, yet I vainly tried to catch its outline, for each limb and lineament was breathing, and around was woven a thin robe of finest moonshine, whose ever varying colors were brighter and more changeable than those which flit across the lunar rainbow. She turned her face towards me. I knew not where it was I had seen a faint resemblance of those beauties. Hand with hand I journeyed—for, an unseen influence impelled us on, through groves of ever blooming trees, whose every bud and leaf filled the air with music, as they quivered in the wind. Nor alone passed we thus onward—thousands from a thousand quarters, merging towards the same centre, accompanied our wanderings; and all bore

crescents on their brows; from which most luscious odors were distilled to gladden the hearts of those who trod within the mystic gardens of that paradise. My fair companion looked and smiled upon me. The veil of light fled for a moment from her face; it was my own, my lost Zobeide.

It was a summer's eve—I lay upon my couch tranquil but weary; it seemed as I had just waked from a long trance, and was now gathering anew my energies to go forth unto the world. Long I lay in drowsy wakefulness; on my brow and cheek the cool and pleasant breeze swept gently, creeping through the open lattice, and bearing on its balmy pinions the tribute which each loving flower paid as it passed along. There was an old man bending over me: when he saw my eyelids open, he clasped his withered hands, upturned his eyes to Heaven—rapidly his thin lips moved. Exhausted, he sunk upon the floor. I lay unmoving, for as yet my thoughts were not my own. The recollection of the past came slowly over me—a tomb rose on my sight; gathering my wandering faculties, memory recalled Zobeide, and at once I knew all that had happened. I knew that I had been ill; my visions again flitted before me, and in all I recognized my lost Zobeide. The old man's face again bent over me, and I knew it was the father of my love. I spoke to him—the tears coursed each other down his furrowed cheeks—and he, who for weeks and months had watched over me, then sunk beneath his feelings. They had been unnaturally wrought up and excited, so that he had endured what few could else have borne. Now that I was recovered, the excitement was over—the stay which had supported him was suddenly withdrawn and the old man fainted. The slaves flocked into the room, and though they saw that I had oped my eyes, yet were they heedless of me; their whole attention being given to the old Hakem, (24) whom all loved. Slowly he recovered; he was carried to his own couch, that exhausted Nature might recruit her powers. Thought and reflection, with returning sense, came to me. I was calm, for my frame was still weak, and my blood had boiled so long, that now its fevered heat was gone. I dwelt upon the past; it was tasteful to me, for it was linked with associations of Zobeide; and every memory of her was painful, as it told of lost happiness, and as I deemed that my fair one was now in Heaven. I could find no content. I could no longer indulge in grief, for the fountain of my tears was dry; and I could not think of joy, when Zobeide still floated before my eyes. I, therefore, resolved to seek the only solace, the only refuge for my wounded spirit, and to wander in search of the waters of oblivion.

In three days the good Ishmael appeared again before me; his feet tottered, for his limbs had not yet recovered from the attack that greeted my awaking to convalescence. He came to the side of the couch on which I lay, and taking my hand between his palms—"You have been ill, my son," he exclaimed—"but Allah has preserved you,—he has listened to my prayers, and at length a bright star appeared in the sky, after I had watched long in hopelessness. Great is the God of Mahomet, and bounteous unto all the faithful." (25.)

"There is a mist upon me, my good father, which obstructs my remembrance; but I believe I have been

ill, and that more than once I saw your face bending over me. Was it not so?"

"Yes, my son, I watched you; for you were the last link that bound me to earth. My studies are tasteless and insipid to me, when there is none unto whom I may impart my thoughts. I should have been like the old pine on the mountain, which, the last of the forest, the lightning has scathed. I should have stood alone, stripped of my leaves and my branches, and fallen uncared for and companionless."

"Your own life has been nearly sacrificed for my preservation; your kindness falls on me like the dews of Heaven on the flowers of the field; yet I little deserved such unusual regard."

"My son, selfishness was mixed with my own motives; (for in all our actions our impulses are partly evil)—the oak, that for years has been clothed with the ivy, would perish if the parasite were plucked from it. You have grown around my heart; and had you died, in misery I should have followed you. You were the sun that lighted for me the darkness of this world—there was one other, but she is gone—my loved Zobeide is as one whom the waves of the sea cradle in their dark caves."

The old man's voice seemed a spirit from the past; it was like the voice of home when it speaks in silence to the exile; it conjured up all the memories of the sweet bygone hours: they burst over my soul in a flood of light, dazzling as when the day shines through the opened portals of the dungeon, to him who has been for years its inmate. Yet more painful than ever was remembrance: it eat into my soul as the rust consumeth the sheathed sword. "And now I must seek the waters of oblivion."

"T were vain, my son, though thy Peri assist thee."

"It may be, yet I must attempt it. I must leave you, good father. I can no longer endure the silent grief that preys upon me. I must depart. May Allah protect me."

"Your project is wild, yet go; change of scene may bring with it change of feeling; moreover it will make you conversant with others' woes and so forgetful of your own. Go, my son, and protection ever be with you. Yet the waters you desire, may not easily be found; many sages have sought them, but they have ever returned unsatisfied. Still go, my child. I too shall leave this abode of sorrow—and although I may not long survive when you are gone, yet will I seek in other climes alleviation of my afflictions. Adieu! here let us part; but take with you this signet—there are two which resemble it; one I ever keep myself where it cannot be lost, and the other my poor Zobeide kept with like care." (26.)

We parted! since that time I have not seen, I have not heard of my old guardian; and Ishmael is probably as ignorant of the fate and fortunes of Amram. Yet we shall meet again in the gardens of Heaven, if not here. I turned my face towards the rising sun, and thus began my pilgrimage, crossing the great desert with a caravan I overtook a few days' journey from Demeshk. Three weeks I travelled alone, after leaving the caravan, through varied scenery, till I came to a still lake, which spread before me its silver bosom. For a moment I was enchanted with its beauty—the weeping willow bent over it, and the chenar trees were lovelier than those that shaded the banks of my own Baradee. Amra

trees(27) were there—and the purple blossoms of that tree which presents the appearance of spring and summer ever enduring together. Vines, too, with clustering fruit, more delicious than the golden grapes of Casveen; and almond trees which might have rivalled those that bloom in the gardens of Dehlee. On the glassy waters, purer than the lake of pearl, red lotuses and blue water lilies raised their graceful flowers, while the banks were clothed with a soft grass, sending forth continual fragrance like that on the margin of the sacred Ganges. Neither were the leaves of the golden Champac absent; nor the ruby flowers of the Camalata; nor the Amreta Jambu, which gives its name to one of the fairest trees of Paradise. It were vain to describe all that decked that magic scene—earth seemed ransacked of her beauties, so varied were the flowers that bloomed beside that lake. But the pleasure which these afforded, did not continue. I sickened with excess of beauty, and the stillness of all things sunk on my soul as the atmosphere of the vale of death. The sheen of the broad basin remained unchanged—a wide expanse of liquid silver, over which there passed no shade—and the sky was blue above, but there was no cloud-wreath to relieve the sight; the birds were mute, and the leaves slept unquivering on the aspen bough. I was alone, and the still beauty of the scene made me more sensible of my loneliness. I tried to flee from the spot, but I could find no path to guide me—there were no footsteps on the long grass. Ever as I moved, flowers of melancholy associations sprung up beneath my feet—the Rayhan, whose soft tufts wave over the graves of the departed, and that Tuberose which the dwellers in the eastern islands(28) have named the mistress of the night, together with that flower which dispenses not its odors till darkness approaches, and seems itself the harbinger of death.

My brain reeled in a mist of its own creation. Overpowered, I staggered to the margin of the lake, and seeing there a light boat unmoving on the waters, I leaped into it, almost unconscious of my actions. The skiff wheeled round, for as I stepped upon it, a rapid current swept down the lake and hurried me away. I fell, almost senseless.

As my senses returned, I could perceive that I lay on a bed of flowers in that caique, borne down the narrow stream with the swiftness of lightning.(29) Trees, more beautiful than those I had seen on the borders of the lake, bloomed along the banks of that impetuous river; and their overreaching branches and blossoms hung so low that I thought to catch them as I was hurried onward. I stretched my hand to catch them, but their fragrance only I reached. Sometimes a stray flower fell into my hands, but I had no sooner touched it, than its beauty paled; it gave me pleasure no longer, but withering, quickly died. On I was borne—the arrow flies not straighter to its mark, than that boat bounded on toward some hidden home. The stream became wider and the trees bloomed thinner on the banks. I tried no longer to catch their flowerets. Still, onward, the river widened, and instead of blossoms and green leaves, sharp and jagged rocks frowned down upon me; but in some few and distant places I could see the acacia waving its bright saffron tresses, or a small tuft of green grass, on which my eyes would willingly have delayed. Still my small caique danced onward; the rocks increased

in size; verdure and vegetation were forgotten; the high mountains bathed their white heads in the dun clouds of Heaven, which hung over me like one vast shroud of watery vapor. But there was one bright blue spot in the far distance, though the leaden waters were not gilded by its smile. My boat stopped not; on it hurried with the same steady and rapid movement. The rocks drew nearer; I could not see them, but I felt the change; a tangible mist enveloped me, and a darkness which was not night—for that one blue spot was still visible, like the light of hope in the midst of sorrows. There was no rest for me; the river hitherto so smooth, fretted and chafed amongst the hidden rocks—my boat leapt from wave to wave; the billows raged higher, and boiled as when the waters of the Coral sea(30) bursting through the strait of Tears,(31) mingle their waters with the mighty ocean. The crags met, and through the low arch the tumbling boat shot. Once more I was in the open air—the unspotted blue of Heaven smiled over me. I looked back towards the stream I had just quitted—it was gone—shut out by the thick mist that rose behind me; and I found myself a lonely voyager on the dull untraversed waters of a shoreless sea. My boat moved not, but lay slumbering on the palsied waves; the sky became dark and lowering—behind me and before me the dense mists hung on the verge of the bright blue, as if eager to swallow up its brilliancy; there was no sound—no breath—the air itself was sleeping. I submitted to the strange influence of the place, and lay in waking slumbers; yet no visions came to gladden my soul; the semblances of things had vanished from my mind, and I could think of nothing but that sky and of those waters and of my weird boat. My skiff moved not, and yet there rose before me in the flushed horizon, a wall of shining crystal, on which the roseate hues of light danced fitfully. Rapidly did they come nearer, though my boat seemed still unmoving. Those crags of ice divided—the portals soon resolved themselves into dread shapes, from which a chill benumbing atmosphere proceeded and wrapped itself around me. From all sides, before, behind, battlements and towers of ice sprung through the misty shroud, and bathed their glittering peaks in the living light of Heaven. Slowly these walls closed in, and the waters of the lake, on which I floated, became dense and more dense. Then a loud voice, as of one the grave had freed, rung on my ears, "*On, mortal, on—thou hast no choice; the waters of oblivion are before thee—on to those waters whence is no return. Child of clay, thou hast sought the treasure of the genii in their wild and magic halls; on, for the waves of oblivion shall roll over thee.*" The voice had spoken; at once the water and the air and the blue heavens all found a voice and shrieked in dreadful unison: "*On, mortal, on—thou hast no choice; the waters of oblivion are before thee*"—and those crags of wondrous crystal threw back the awful sounds from peak to pinnacle, as when the loud thunder laughs at midnight among the lofty mountains. "*On, thou hast no choice—the waters of oblivion are before thee.*" Crag answered unto crag, till o'er the roaring waters there hung an atmosphere of loathed sounds. Then there rose, as if from myriad mouths, a wild and fiendish laughter, and those walls of ice burst out in wanton mirth, while the water and the air laughed in wild symphony. Suddenly the bosom of that lake, which be-

fore had been so still and smooth, rushed on in foaming rapids, and the war of streams sounded like the cataracts of Bahs el Nil. Swift as the eagle, when he swoops on his prey, or as the death-bearing Samiel, the light boat sprung forward, and through those portals of the ice, shot towards the waters of oblivion—and as I passed, they closed behind me with a horrid crash. “This cannot be,” I cried; “the prophet will not resign his votary into the hands of the rebellious angels; it may not be. Dread powers of darkness and of ill—by the victory of Soleyman, I conjure you—by that charm which has excluded you from Paradise—by the majesty of Allah, and by that mystic spell which mortal lips may not pronounce, and which accursed ears dare not hear.” With sudden plunge those toppling crags vanished in the dull waters, with themselves, and in their stead there sounded on my ear the sweet music of a rippled stream. My eyes were open, and a weight was off my spirits.

When my eyes had become habituated to the light, and the effects of that trance had passed away, I found myself reclining by that silver lake whereon I had started in the enchanted boat. The date trees waved over me their graceful foliage, the moon shone bright, and the stars viewed with joy and admiration their beauteous orbs glassed in the deep waters.

A spirit appeared to me—the radiance of her countenance and the brilliancy of her figure made the moon appear dark in heaven. She bent over me; and the words proceeded from her mouth sweeter than the remembered tones of a sweet sound; more soothing than the silver tones of Izrafil. “Amram,” she said, “I have visited you with a dream—you have wished for the waters of oblivion; wilt thou now that I conduct you where you may meet with the reality of your vision?” A shudder ran over me—my cheek turned pale—a cold sweat issued from all the pores of my skin—the blood stagnated in my veins, and I had only power to exclaim, “Nay, fair Peri; drive me not thither; the recollection of those horrors overpowers me. I will not taste of those dark waters.” “Amram,” she replied, “it is well I have watched over you; for my oath to your mighty father compelled me. This time have I rescued you from the jaws of destruction. Farewell, and know that Zobeide liveth! (32.) Seek.”

I did not remain long in the place where she had left me, but with the earliest dawn I proceeded to retrace my steps. The path which in the evening I had so hopelessly sought, presented itself at once for my acceptance. Instead of the stillness which before had been spread over nature, the birds carolled lightly in the woods—the winds made wild music in the trees, and every flower, that bloomed along my path, breathed forth the notes of gladness. With the utmost speed, I returned towards the vale of Demeshk, hoping that my Zobeide might possibly have returned toward the home of her childhood. Hope and fear were so nicely balanced in my bosom, that I forgot all my former desires of oblivion, and journeyed on in lightness of heart. But as I entered the vale of Sham el Demeshy, fear so far predominated, that I almost anticipated the reply to my frequent and vain inquiries, for I found that no intelligence had ever been received of the lost Zobeide. I visited all the spots which her partiality had consecrated—I strolled through the chenar grove—and for hours

I reclined in the jessamine bower; I even visited the tomb I had erected to her, but the sadness which it inspired was mellowed by my belief in her existence.

I now despaired of ever finding her again, without chance should throw her across my path; and I should probably have remained in the vale of Demeshk, if I had not remembered my protector, Ishmael, and been seized with a desire of informing him that his daughter still lived. But ere I again quitted, perhaps for ever, that sweet paradise, I sought the banks of the cool Baradee—and looking on it with a feeling of affection, “Murmuring rivulet,” I cried, “laughing and sparkling in the noontide sun, sweet art thou to my heart! Still thou smilest and sportest, as when in the days of my childhood I stood by thy brink and watched thy current bear along with it the little boats which my idle fancy made of every twig that sailed down thee. Still thou rollest on, and strayest in happy ignorance of thy future lot—knowest thou that thy pleasant course will be ended—that thy waters will be lost in the brine of the ocean and thyself seen no more? Thou canst not, or not always wouldst thou wear that cherub smile upon thy cheek. My life is like thine: in childhood all was gladness—the sorrows, that like April showers at times bedimmed my joy, were but as the light clouds that, from time to time, steal from thee the cheering rays of the sun and rob thee of thy smile. But they quickly vanished, and every little incident that then happened to me, was like the straws and feathers, the leaves and flowers, which are carried along at thy sweet will. My gladsome thoughts seized them and hurried them along with me—and as the bee, unheeding, extracts honey from all flowers, so did I suck joy from things which to others might have seemed painful. But the tide of my life has rolled onwards, and brought to me, as it does unto thyself, a deeper and a wider stream—and now the brightest beams dance coldly on the surface, without penetrating to the heart as they were wont to do of old—and instead of sporting with the few green leaves and bright blossoms, they fall unregarded upon me. My stream is still rapid as before, but its rapidity makes it turbid. Still I roll onwards as thyself, fair brook, till I reach the ocean—the boundless and shoreless ocean of eternity. Smile on, then, my sweet Baradee; and though to me the past has been full of tears, yet will I smile with thee, for thou carriest me back to the glad days of my childhood.” I bent over the stream. I scattered some flowers and green leaves upon it, and for some minutes my tears fell unnoticed on its sparkling waters. “Will there ever be one,” cried I, “to shed tears over me, or to scatter fresh flowers on my grave when I am dead? None, (33,) with that sensation of pleasing regret with which I now deck thy bosom—for the hand of the stranger will adorn my tomb, and I shall die an exile from my home. Thou hast ever been my companion, and hast lent a ready ear to complaints which none other has heard. All my secrets have been confided to thee, and I have fancied that thy wavelets sympathized with my sorrows, for they seemed, to wear a softer smile. Adieu! then, fairest of rivers. Adieu! my own sweet Baradee.”

I turned and quitted the spot. I wandered in search of the father of my youth—the sage Ishmael—him I have never found. I have visited the shrine of our prophet—I have kissed the holy Caaba, (34)—I have drunk

of the soul-curing waters of Zemzem,(35)—I have lived with the tribes of Araby, and the tribes of Tooran(36) have extended their hospitality to me. I have visited the burning lakes(37,) which flame beside the great water of judgment,(38,) and have dwelt with the Guebres,(39,) whose sincerity and goodness deserve a better creed. In the course of my travels I have observed, that in all places the good and the bad are mingled—that kindness is naturalized on earth wherever man can live. I have observed that religions, which should unite all men, if the welfare of men be their intention, are unfailing sources of contention and bloodshed. I have found men possessed of the greatest virtues, marred by some trivial fault, which dimmed the lustre of their goodness; and characters of acknowledged vice, possessed of some dazzling virtue, which blinded the eyes of men to their faults. I have travelled much—the words of Ishmael I have tested and found true—there is no happiness—but I hate not the world in consequence, rather loving it, that I may alleviate the miseries of others in the hope of consolation in return. For vain as this consolation may appear, when carefully scrutinized in the eye of reason, yet it invigorates the heart, as the dews of the morning refresh the budding, and like snow sinks deeper in proportion to the lightness of its fall. I have found neither Zobeide nor Ishmael, yet I cannot conceive my time ill spent, since it has inclined me to a firm reliance on the bountiful goodness, and a pitying tolerance for the errors of others, whether in religion or in life.

Many revolutions of the sun had passed over me, since I quitted the soft flowing Baradee, and I was returning once more to revisit the centre of all my pleasing thoughts and fancies, when slumbering by the banks of the Euphrates, the voice of the Peri again sounded like music on my ear—"Up, Amram, arise! thy lord cometh and the hour of thy joy is at hand; haste thee to the plains of Farsistan, pass from the vale of Lilies(40) without delaying, and thou shalt find the prince Aboun Hassein by the fount, which wells out from the mountains of Fire(41)—him shalt thou accompany."

My tale is ended—the servant of my lord is before thee—thou knowest all—and if my story hath deserved thy attention, may it keep alive in thy breast the remembrance of "Amram, the wanderer."

Notes explanatory of Orientalisms employed by the Persian author.

(1) "Mirage." This word hardly needs explanation in the present day, for every one now knows that there is an ocular deception under the appearance of water, frequently met with in the deserts of Asia and Africa.

(2) "Moussa." Moses. The Mahometans claim the same right to scriptural references that we Christians do.

(3) "Sham el Demeshy." "On the eastern base of Libanus is the fertile plain, watered by numerous streams, where the ancient city of Damascus stands—the Demeshk, or Sham el Demeshy of the orientalis. The environs of the city, watered by the Baradee and other small streams, present at all seasons of the year a pleasing verdure, and contain an extensive series of gardens and villas. The valley of Damascus or Gather, is, according to Abulfeda, the first of the four terrestrial paradises." Malte Brun Geog. 110, xxviii, 3.

(4) "Green as the turban of an Emir." Green is the sacred color of the Mahometans, and the use of green turbans is restricted to the grandees, if I mistake not, for I cannot at present refer to the authority; but the words of the Persian author of this tale should be considered sufficient authority.

(5) "The fleeces of Angora" are so soft as to have become proverbial.

(6) A practice which even now is not renounced in the East, as is evident from the following passage of Malte Brun: "The Afghans believe in alchemy, magic, astrology, and the prophetic character of dreams." From a work entitled 'Travels in the East,' and published in the latter part of the seventeenth or the early part of the eighteenth century, I extract the following passage, to show the respect in which astrology was held even then: "Astronomy is studied in Persia purely for the sake of astrology; which last they term the revelation of the stars. The people of the East look upon astrology as the key to futurity, and they have an insatiable curiosity for prying into things to come. This seems to be the principal end of their studies, and they look upon a person to be stupid and ignorant to the last degree, who speaks slightly of this science."

(7) Where they may still be found, along with singing birds, ever living waters, and a variety of other curious things; for an enumeration of which I refer the reader to D'Herbelot and the Arabian Nights.

(8) "Baradee." See note 4.

(9) "Soleyman ben Donad." Solomon, the son of David, the greatest of the Preadamite kings, according to the orientals.

(10) "Zitars." A musical instrument, probably resembling the cithara of the Greeks and Latins, for its description as well as its name resembles the "testudo Apollinis."

(11) "Chenar treea." The favorite tree of the east; being a species of the sycamore.

(12) "Sultana Scheherazade." The name will instantly recall that beautiful work "The Arabian Nights Entertainments" to the minds of all readers. And here I would observe, that these tales seem as much admired in the east as they ought to be in the west.

(13) "Tall and graceful as the cedar of Lebanon." The proximity of Damascus to the mountain would naturally suggest the comparison.

(14) "The marble of Shirameen." "Near the village of Shiraméen, not far from the lake of Shahoe, are ponds or plashea, whose indolent waters, by a slow and regular process, stagnate, concrete and petrify, and produce the beautiful transparent stone commonly called Tabreez marble."—Shoberl's Persia. Mr. Morier observes, that in its last stage of concretion, the marble is white like l'was frost.

(15) I was unable to translate the Persian word by any which might convey its real force, and therefore substituted "labyrinth," though it detracts from the consistency of the work. But the fault is that of the translator.

(16) According to the religious philosophy of the Mahometans, the basis of Mount Caf is an emerald, whose reflections produce the azure of the sky—the mountain is endowed with a sensitive sensation in its roots or nerves—and their vibrations, at the command of God, is the cause of earthquakes."—From a note in Gibbon's Hist. Dec. and Fall. Rom. Emp. Vide etiam D'Herbelot, Bibliothèque Orientale, pp. 230-231.

(17) The reader may from this perceive the propriety of Lord Byron's distinction:

"By Helle's stream there is a voice of wail,
And woman's eyes wet—man's cheek is pale."

Bride of Abydos.

(18) The classic scholar may be pleased with the coincidence existing between this passage and the line of Hesiod—Works and Days:

"*Ἄλλ' ἐμύγῃ καὶ τοῖσι μεμῖξται σόθλα κακοῖσι,*"
and the still more beautiful words of that sweet bard Lucretius—
—Medio de fonti leporum
Surgit amari aliquid.

(19) I would not willingly lose the opportunity which this allusion affords of adding my mite of admiration to the thousand voices which have praised that wonderful tale "Vathek."

(20) Who would not gladly be reminded of Shakspeare's words—*Henry IV, part II:*

P. Henry. I never thought to hear you speak again.

K. Henry. Thy wish was father, Harry, to that thought.

(21) "The Green Sea" or Oman's Sea, is the Persian Gulf.

(22) Among the Eastern nations a dark languishing eye is considered the greatest of beauties.

(23) Among the papers from which this translation was made, I found a loose scrap, on which was a species of lyric verse, apparently descriptive of the beauty of this vision of the night.

Not knowing whether to consider it as part of the poem or not, I have preferred introducing it here:

Her form was loveliness embodied—

Not those bright and fairy shapes

Which we are apt to conjure up,

When the last hues of evening spread

Their soul-entrancing charms around,

Could equal her in beauty.

Her rosy cheek, flushed with the joy of youth,

Was clearer than a summer morn,

When from the ocean's golden breast

The sun uprising in a flood of light,

Bursts into new existence.

Her brow was white as alabaster ;

And where the purple veins meandered,

It seemed as though the God of Love

Had set his seal, and left those bubbling founts

Of life as tokens of his presence.

(34) "Hakem," or wise man, applied more especially to their physicians.

(35) The Mahometan religion is distinguished above all others for the pure and unhesitating reliance of all its votaries on the goodness of Providence. In all dangers, in all afflictions, in the hour of prosperity, and in the hour of expected death, the maxim to which the Osmanlee steadily adheres, is "Lord, not my will, but thine be done." Would that their sincerity were grafted into a purer creed.

(36) The Persians and Orientals, in general, are remarkably superstitious in relation to amulets—few ever go without them. "Charms and amulets," says an old writer, "against diseases and enchantments, are another part of their superstition. You will not find a Persian without his amulet, and some of them almost loaded with them," &c. &c. *Travels in the East*, 1690, 1710.

(37) The description of these trees would occupy so much space, that I must content myself with referring the inquiring reader to Chardin's *Voyages en Perse*; Malte Brun's *Geograph. Universelle*; and Sir William Jones' *Asiatic Researches*.

(38) Of Java and the Sumatran chain.

(39) In this passage the author seems to have been desirous of portraying, metaphysically, the course of life. We come into the world—during the first fourteen or fifteen years of existence our thoughts are occupied chiefly with looking abroad upon the world and admiring the various novelties which are presented to our sight. About that age we feel an inclination to go forth unto the world ourselves, for it appears still beauty to our eyes, for the wandering fancies of our hearts prevent us from observing the shifting scenes of that which is before us. Once embarked, however, we perceive ourselves rapidly hurried forward, and though at first our brains turn giddily, from being so suddenly plunged into the vortex of action, yet this feeling, sooner or later, passes away, and we see thousand fancied pleasures almost within our reach, which we vainly strive to catch. As life glides on, these joys seem to recede from us, for our hearts being no longer set upon them, they are seen at juster distances. As we grow still older, the very perception of them departs; they remain upon us merely as the wild vagaries of childhood, and we laugh at those who seek over them, as duped by those deceptions which we at length have escaped. The imaginative admirer of Amram's philosophy may range, on this subject, o'er the wide fields of his own fancy, and come at length to the conclusion, that as the rocks drew nearer on the path of the voyagers, so do all things cling closer round us as we approach that goal whence we must spring from time into eternity.

(30) "The Coral Sea." The Red Sea, so called from its abounding in red coral.

(31) "The strait of Tears." The straits of Babel Mandel, so called by the Orientals, from the dangers of its passage.

(32) Though here informed, in a manner I cannot doubt, that Zobeide lives, yet, after looking over the greater part of the papers, I have not been able to discover her locality. But if continued application make me more fortunate in my labors than Amram has hitherto been, I shall certainly give you the desirable information on the subject.

(33) Though we may all agree that the love of the animate is better than that of the inanimate, yet the pleasure is not so durable. In the latter case the feeling is a reflex operation of

our own hearts; we love something inanimate; in fancy we embody similar feelings in the object of our attachment, and by the action of the will and the imagination, we transfer them back unto ourselves, and endeavor to forget that the whole series of thought and feeling proceeds from our own minds.

(34) "The Holy Caaba." The black stone of Mecca, whereunto the faithful ever turn their faces when they pray. Vide Gibbon and D'Herbelot.

(35) "Zemzem." The sacred fountain of Mecca, which possesses all the wonderful powers of the lake of Bethesda.

(36) "Tooran." The Persian name for Tartary.

(37) "Not far from thence (Balaghan near Eikon) is the field of fire, about a square verst in extent, and continually emitting an inflammable gas."

(38) "The great water of the judgment." Among the many names given by Orientals, the one "in the Tene-Avesta is worthy of remark. That apocryphal work, which is full of old traditions, calls this sea Tchekâet Daéti or "the great water of the judgment." Malte Brun, liv, xxxiv.

(39) The Gaurs, or "Guebres, are the relics of the ancient Persians, who have refused to embrace the doctrines of Mahomet and retained the religion of Zoroaster." Shoberl's Persia.

(40) "Khusistan." The ancient Susiana, whose capital, Susa, signifies "city of Illies." Vide Malte Brun.

(41) "The Mountains of Fire." The El Ahwas mountains, (south-west from Ispahan,) anciently called Parachootra, or Mountains of Fire, according to the testimony of Abulfeda, Hadgi Khalfah, &c.

CONSUMPTION.

He had been her idol;—from day to day,
She pour'd the incense of her unshared heart
Upon his shrine. To her eye, all that's best,
Of earth's beauty, met in his radiant brow—
To her ear, his voice had more of music
Than all earth's measured melodies combined.
And now she saw him dying! hour by hour
The living vermeil of his bright cheek fade,
And the destroyer spread his waning wreath,
To mock with its false light the opening tomb.
What tho' his voice had bade her trust no joy
Of mortal birth! and told in faith deep trust
Of that bright world, where love, deep quenchless love,
Forever reigns, without or death or change?
The fond young heart, by its crush'd hopes—by tears
And griefs from the heart's core,—by the deep thirst
Unquenched by mortal streams, alone can trace
Its weary wanderings to the founts of faith.
And still she dream'd of hope—some sunny isle
Fanned by soft breezes, fresh from myrtle bowers
And groves of spices, rich with healing balm,
To cool his fevered temples, and distil
Through his parch'd veins the springs of life anew.
And spring returned with its soft showers, and dews
Distilling nectar from the honied flowers—
And bee and bird-fly calling treasured stores—
Breeze and insect, and all that love the sun,
Returned,—but not to the poor sufferer health.
And with the yearnings of the exile's heart,
He panted for his native streams and vales—
Familiar paths and household voices, things
Deeply stored in memory's hallow'd shrine—
But most he sighed to rest his weary head
Neath the wild flowers of his own lov'd home.
Fond wish and vain!—no native shore shall rise
To scatter dust on thy fond faithful breast—
But with old Ocean's gems, the young and true—
The beautiful, the lost, thou'lt find thy rest.

The ship unmoor'd—along the dancing wave
 The young and gay—the light of heart are borne,—
 And wit and song, and revelry and mirth
 Resound. But hush! the song is ceased, and lo!
 Amid the list'ning crowd the sound is heard,
 "Death, Death is here!" Dread foe! could'st thou not stay
 Thy hand, and let this brightest victim pass?
 But no! 'tis done! the cold dark waves rebound,
 And clasp this treasure in their sad embrace.

Condens, S. C.

S. P.

EXAMINATION OF PHRENOLOGY,

In two lectures, delivered to the students of the Columbian College, District of Columbia, February, 1837: By Thomas Sewall, M. D., Professor of Anatomy and Physiology. Second edition, revised and enlarged. Boston, 1839.

The pursuit of novelty has always exerted a powerful influence over the mind of man. From the days of Eve to those of Gall and Spurzheim, it has formed one of the strongest propensities of our nature; and while it has been the original source of many useful discoveries in science and important improvements in the arts, it has also caused the sacrifice of many an intellectual effort, and the loss of much valuable time.

The origin and progress of what is called the science of phrenology, is a striking illustration of the truth of these remarks. Of all the visionary fabrics which have ever been constructed by the ingenious or supported by the credulous, few can be mentioned, that are more completely baseless than this. With just enough of novelty to engage the curious—of originality to entrap the superficial—and of ingenuity to enlist the reflecting—it presents many points to attract public attention and gain popular favor. Its pretended foundation on personal observation—its lofty pretensions to genuine simplicity—its pompous claims to superior success in explaining the operations of the human mind—the skill and address of its really eloquent and able founders, have all tended to gain active proselytes and attract devoted followers.

But, if we do not entirely misread the signs of the times, the dark shadows of a long, if not an eternal night, are fast gathering over its clouded horizon; and notwithstanding its temporary success and evanescent popularity, we firmly believe that this, like many other brilliant meteors, has arisen to glitter and dazzle but for a moment, and then disappear forever before the overpowering light of true philosophy and genuine science.

In France and Germany, where this progeny of genius and observation, which was to illumine the darkest recesses of mental philosophy and afford a ready clue to the whole labyrinth of metaphysical vagaries, first saw the light—even in France and Germany, which we should suppose peculiarly fitted, from the tendency to imaginative speculation in the one, and the fondness for specious novelty in the other, to afford a ready support to its deceptive sophisms and oracular dogmas—even there, where, (if any where,) we should think it might bask in the perpetual sunshine of popular favor, it has already ceased to attract public attention or claim a place among the important pursuits of man.

In Paris, we learn from recent and undoubted authority, that it no longer creates any interest—that very few of the distinguished *savans* of that metropolis of science have any faith in the truth of its doctrines, and that still fewer consider them worthy a serious discussion.

It is, however, no part of our object to enter upon an examination of the merits of phrenology or of the justice of its claims to be ranked among the valuable discoveries, which the science and learning and indomitable perseverance of the present day have sent forth to instruct and benefit mankind. We wish merely to introduce to the notice of our readers, the work, whose title is placed at the head of this article—a work, which has not been surpassed, if it has been equalled among the numerous productions on this subject, for conclusive reasoning, masterly induction, and overpowering argument.

Professor Sewall's work consists of two lectures, delivered to the students of the Columbian College in the city of Washington, and published at their request. In the first lecture he gives a brief but comprehensive, candid and perspicuous outline of the peculiar views entertained by phrenologists; and in the second he inquires how far these views are sustained by, and are consistent with, the anatomical structure of the cranium and brain—a course of argument and discussion perfectly fair to his opponents, and yet quite different from that which has generally been pursued in the attempts to overthrow this mis-called science.

Professor Sewall first presents a brief historical sketch of the origin of phrenology—of its introduction to the medical and scientific world by Dr. Gall, in a course of lectures at Vienna in 1796—of his association with his favorite pupil Spurzheim in 1804—of their lecturing in most of the principal cities of Germany, Prussia, and Switzerland, in 1805, on their way to Paris—and of their reception by the French Institute, which distinguished body appointed a committee to report on their peculiar views, at the head of which was placed the first comparative anatomist of the age, M. Cuvier. Of this report, Dr. Sewall states, "some merit was awarded them for the improvements they had made in the manner of dissecting the brain, and for a few other innovations; but many of the discoveries which they claimed as original, were traced to anatomists who had preceded them, and their main positions were regarded as extremely hypothetical."

"Dr. Gall died in Paris in 1828, at the age of seventy-two. Spurzheim, while he considered France his residence, travelled extensively through Germany, Switzerland, Prussia, England, Scotland, and Ireland, making observations, teaching phrenology, and collecting facts. He returned to Paris to reside in 1817, where he regularly gave two courses of lectures upon phrenology annually; but complained, that during his absence, the subject had in a great measure been laid aside and forgotten. In 1824, he married a lady of fine talents and accomplishments, who entered deeply into the spirit of his enterprise. This event seems to have given a fresh impulse to his investigations, and to have inspired him with increased zeal in extending the influence of phrenology.

"Spurzheim, in 1832, visited the United States. His objects were to study the genius and character of

our nation, and to establish and propagate the doctrines of phrenology. He landed in New York on the fourth day of August, and proceeded almost immediately to Boston. Here he was received with all the respect and kindness for which the inhabitants of that ancient metropolis are so distinguished in their treatment of strangers. He was conducted to the various public and private institutions; was introduced to the literary and scientific personages of distinction; and every thing was done to render his stay agreeable, and to promote the object of his visit. He was invited to deliver lectures, to examine heads, and to explain his doctrines. But he had scarcely entered upon his career, when he was struck down by a fever, of which he died on the tenth of November, in the fifty-sixth year of his age. His remains were interred at Mount Auburn, with every mark of respect, where a neat and beautiful monument has been erected to his memory, by the generous and high-minded citizens of Boston."

Dr. Sewall then goes on to show, that ideas similar to those of Gall, were entertained and promulgated long before his time, by Aristotle, by Galen, by Gordon in 1296; by Albert, archbishop of Ratisbon, in the thirteenth century; by Montagnana in 1491; by Servetus, who died in 1553; by Dolei, a Venetian; by Porta of Naples; by doctor Willis of London; and by baron Swedenborg. He adds, however, that "whatever may be the truth with regard to the origin of phrenology, it is through the writings of doctor Gall, supported by the untiring labors and invincible zeal of his pupils and disciples, that the science has been widely spread through the civilized world. And it is by these labors, and by this ceaseless spirit of exertion, that the subject has been brought to our shores, and has afforded the occasion to investigate it and ascertain whether it furnishes us with that infallible guide in the study of human character, which has been pretended."

Professor Sewall then gives the following as the fundamental principles, upon which the whole system of phrenology is based:

"1st. Phrenology, like most systems of mental philosophy, makes the brain the material organ of the mind.

2nd. It assumes the position, that just in proportion to the volume of this organ, other things being equal, will be the power of the mental manifestations.

3rd. That the exercise of the mind promotes the development of the brain.

4th. That the character of the mind is to be determined by the configuration of the brain.

5th. That the brain is a multiplex organ, and composed of a definite number of compartments or sub-organs, each of which is the appropriate seat of a propensity, sentiment, or intellectual faculty.

6th. That the mind consists of a definite number of original powers, which are divided into propensities, sentiments, and intellectual faculties.

7th. That to the existence of each original propensity, sentiment, or intellectual faculty, a specific cerebral organ is necessary, and that every specific mental operation can be performed, only by means of an appropriate organ.

8th. That the brain is composed of at least thirty-five phrenological organs or pairs of organs, all commencing at the medulla oblongata or top of the spinal marrow, and radiating to the surface of the brain.

That they commence at a point, and like so many inverted cones, become more and more voluminous, until that portion which is bounded by the walls of the cranium, presents a surface corresponding in form, size, and situation with the figured skulls, delineated in plate 1, fig. 2, and 3.

9th. That just in proportion to the development or size of each of these organs, or cones, will be the strength of the particular faculty of which it is the residence; the size of the organs to be estimated by their length and breadth, and the extent of their peripheral surface; and consequently that each prominence of the skull indicates the degree of development of that organ of the brain which is situated immediately under it, and of course, the power of the intellectual faculty, sentiment, or passion, of which it is the residence.

10th. That the exercise of any particular faculty of the mind, promotes the development of the appropriate organ of such faculty."

"In accordance with these principles, the cranium has been mapped out into thirty-five distinct territories, corresponding, as is supposed, in position, form and size, with the bases of the different organs of the brain."

He next points out the position of the individual organs, and briefly sketches the leading characteristics of each of their respective functions, as described by phrenologists.

In his second lecture, Doctor Sewall remarks: "Having exhibited the leading doctrines of phrenology, as found in the standard books upon the science, and as taught by the most eminent lecturers, my object on this occasion will be, to show how far the science is reconcilable with the anatomical structure and organization of the brain, the cranium, and other parts concerned.

"I adopt this course from two considerations:

"1st. From a belief that the anatomy of the parts concerned, is the proper, and indeed the only certain standard by which to ascertain its truth.

"2nd. That the metaphysical arguments on the subject, while they have been urged with great power, have too often been evaded, and the public mind has not been enlightened as to the real merits of phrenology, by the usual methods of investigation. Even the lash of ridicule, under which it has generally been left to wither, has done but little in arresting its progress or exposing its errors. The ground which phrenologists assume the right to occupy, is so extensive, and the outlets for retreat are so numerous, that it is difficult to present an objection to the science, which cannot, upon the common principles of reasoning, be plausibly evaded. A few examples will illustrate the idea which I wish to convey.

"If an individual has a large head, and his mental manifestations are unusually powerful, the case is brought forward as a proof of the truth of phrenology; but if the manifestations are feeble, it is said that the great size of the head is the result of disease, or that the brain is not well organized, or that other circumstances have exerted an influence in diminishing its power. If a small head be connected with a powerful intellect, it only proves that the brain, though small, is well organised, and acts with uncommon energy.

"If an individual has a particular propensity strongly marked in his character, and there is no corresponding development of the brain, it is said that the organ has

not been thrown out by indulging its desires; but if there is a large development of an organ, and no corresponding propensity, then it is contended that the germ of the propensity is there, but that it has been repressed by education or other circumstances; or it is found that some counteracting organ is fully developed which neutralizes the first. For example, if the organ of Covetousness is large, and the person has no uncommon love of gain, and the organ of Benevolence is also large, it is urged that the action of the one neutralizes that of the other.

"I have already mentioned that the temperament also is supposed to perform an important part in modifying the action of the different organs, and for which all due allowance is to be made.

"When all these fail in furnishing a satisfactory explanation, another method, still more amusing, is sometimes resorted to, in relieving phrenology from embarrassment. It may be illustrated by the following facts:

"There is a celebrated divine now living in Scotland, equally distinguished for his amiable disposition, his gigantic powers of mind, and the great moral influence which he exerts upon the christian world. This individual, it is said, has the organ of Destructiveness very largely developed, and not having any counteracting organ very large, it is contended by those who are acquainted with the fact, that he manifests his inherent disposition to murder, by his mighty efforts to destroy vice and break down systems of error. In this way he gratifies his propensity to shed blood.

"By a recent examination of the skull of the celebrated infidel Voltaire, it is found that he had the organ of Veneration developed to a very extraordinary degree. For him it is urged, that his veneration for the Deity was so great, his sensibility upon the subject of devotion so exquisite, that he became shocked and disgusted with the irreverence of even the most devout christians, and that out of pure respect and veneration for the Deity, he attempted to exterminate the christian religion from the earth.

"Other explanations, as much at variance with truth and common sense, are resorted to in carrying out the system.

"Allowing, therefore, to phrenologists the latitude they claim, it would seem impossible to present a case so contradictory to their principles as not to admit of prompt and plausible explanation.

"It is such considerations as these that have induced me to attempt an examination of the principles of phrenology, on other than metaphysical grounds, or its practical application to individual cases.

"In pursuing the investigation, I shall inquire:

I. How far phrenology is sustained by the structure and organization of the brain.

II. How far facts justify the opinion, that there is an established relation between the volume of the brain and the powers of the mind.

III. How far it is possible to ascertain the volume of the brain in the living subject, by measurement or observation.

IV. How far it is possible to ascertain the relative degree of development of the different parts of the brain, by the examination of the living head.

V. Notice a few facts which have been used in sup-

port of phrenology, and conclude with some general remarks."

Under the first inquiry, how far phrenology is sustained by the structure and organization of the brain—he states, that it is divided by a strong, tough, horizontal membrane called the tentorium, into two portions, (the cerebrum and cerebellum,) the latter being connected with the former by a small aperture in the tentorium near its centre: and that the fact of the existence of this horizontal membrane, separating the superior from the inferior portion of the brain, clearly shows the absurdity of the idea of organs as described by phrenologists. "Upon removing the dura mater, there are exhibited to the eye, numerous convolutions, rendered distinct by grooves which separate them to a greater or less depth; but these convolutions do not, in any respect, correspond in form, size, or position with the bases of the phrenological organs, as mapped out upon the figured skull. Phrenologists do not pretend that there is any relation between the one and the other. Neither the cortical nor fibrous part of the brain reveals, upon dissection, any of those compartments or organs, upon the existence of which the main fabric of phrenology is based. No such divisions have been discovered by the eye or the microscope. The most common observation is sufficient to show, that there is not the slightest indication of such a structure. Indeed no phrenologist, after all the investigations which have been made upon the subject, from the first dawn of the science to the present time, not even Gall and Spurzheim themselves, venture to assert that such divisions of the brain have been discovered; and yet they insist that such organs do exist."

The next inquiry proposed by our author, is, how far do facts justify the opinion that there is an established relation between the volume of the brain and the powers of the mind?

"This inquiry," he observes, "involves one of the fundamental principles of phrenology; and while pursuing the subject, it is proper to remark, that the phrenologist would escape from the consequences of the doctrine, that the volume of the brain is the measure of the mind, by placing the issue upon the relative development of the different regions of the brain, and not upon the volume of the brain as a whole. If the man of strong intellectual powers, for example, has an ample forehead, the man distinguished for his moral and religious qualities, has the superior region of the cranium large and towering, and the man of strong animal propensities, has the back and lower part of the head large and protruding, the developments are said to accord with the principles of phrenology, although the head be ever so small. This position often proves a secure retreat for the manipulator, especially as the lines of demarcation, which are made to separate the different families of organs from each other, are indefinite and variable in their position, and consequently may be drawn where best suits the case under examination. If the forehead happens to be stinted in its dimensions, and the individual still has a powerful intellect, it is only necessary to throw back the line which separates the intellectual organs from those of the moral faculties, so as to allow the former to encroach upon the region of the latter, and the whole difficulty is removed. Upon the same principle, the organs of the moral faculties

may invade the region assigned to the intellectual organs, or the animal propensities may usurp the dominion of the moral faculties, as the circumstances of the case may require. So by drawing the boundary lines of the different regions of the cranium farther forward or backward, the principle is adapted to the case, and the case to the principle. By this course, the phrenologist changes his position, and attempts to evade the legitimate consequences of his doctrine; and cases where individuals were remarkable for the diminutive size of the head, but were distinguished for power of mind, have been brought forward, not only as consistent with phrenology, but as evidence of its truth. But all this neither changes the ground of the argument, nor relieves us from the necessity of regarding the whole brain as the measure of the whole mind."

Professor S., then introduces a quotation from Mr. Combe, and adds some remarks, to prove still more conclusively, that phrenologists intend to embrace the whole brain as the index of the whole mind, and that it is the great fundamental principle upon which the science is based. "For if a small brain can be made to perform its mental functions with as much power as a brain of larger size differently constituted and endowed, volume is no longer the index of power, and phrenology must be abandoned as destitute of foundation. If the volume of the brain then is to be taken as the measure of the mental power, it is important to know whether its absolute or relative size is intended to be understood. If the former, then men of small stature must generally rank as inferior in intellectual power, to men of large size; and phrenology has also to contend with the fact, that the whale, the elephant, and several other animals of the lower order, have a larger brain than man, while their intellect is inferior.

"If the relative size of the brain be intended, then it is necessary to know with what it is to be compared; whether with the dimensions of the face, the size and length of the neck, with the size of the spinal marrow, the cerebral nerves, or with the volume of the whole body. Upon this point, phrenologists have not been explicit.

"The difficulty of instituting an accurate comparison of the brain with the first four of them, seems likely to prevent either from becoming the standard; and the great variations to which the body is liable, from different causes, losing, as it sometimes does, nearly half its volume, while the brain remains the same, renders this not a more certain criterion. Some facts, however, seem to have afforded the inference, that the volume of the brain, as compared with the size of the body, is to be taken as the measure of the mental power; and just as we descend in the scale of intellectual existence, from man through the various tribes of animals, it is said, the brain will be found to be diminished in size, according to this standard. But the investigations of Haller, Wrisberg, Soemmering, Blumenbach, Cuvier, and other anatomists, show this conclusion to be erroneous, and prove, by actual experiment, that it has no foundation in nature."

He then presents in a tabular form a summary of the result of Cuvier's investigations, by which it appears "that four species of the monkey, the dolphin, and three kinds of birds, the canary bird, sparrow, and cock, exceed man in the proportion of the brain to the

body; and that various other animals are nearly on a level with him.

"Nor does the argument in favor of a regular gradation of intellect, according to the size of the brain, hold good, in a comparison of the lower animals with each other; their intellectual capacities not being in proportion of the brain to the body. This fact is shown by the table of Cuvier.

"The doctrine, therefore, that man owes his intellectual superiority to an excess of brain, derives no support from his comparison with the lower animals; nor does it appear, from observation, that this is the source of the diversity of intellectual capacity, which distinguishes individuals of the human species from each other.

"Professor Warren, of Boston, who has probably enjoyed as great opportunities for dissecting the brain of literary and intellectual men of high grade, and of comparing these with the brain of men in the lower walks of life, as any anatomist of our country, if not of the age, says, as the result of his experience on this subject, that in some instances, it appeared that a large brain had been connected with superior mental powers, and that the reverse of this was true in about an equal number. 'One individual who was most distinguished for the variety and extent of his native talent, (says Dr. Warren,) had, it was ascertained after death, an uncommonly small brain.'

The third question discussed, is, how far it is possible to ascertain the volume of the brain in the living subject, by measurement or observation. And he here shows conclusively, that the instruments invented by craniologists for measuring the head are insufficient for this purpose, because the integuments of the head, and the walls of the cranium are not of a uniform thickness, and that we possess no means of determining the degree of deviation from this principle. He exhibits a number of drawings (very handsomely executed by the way) which illustrate very forcibly and conclusively some of these points.

One plate represents, by a horizontal section, "the skull of a sturdy, athletic waterman, who was drowned in the Potomac. It is scarcely the eighth of an inch in thickness, though it is firm, compact, and in every respect healthy in its structure."

Another represents, by a horizontal section, the skull "of a young and once beautiful female, who came to this city from a neighboring state, fell into bad company, abandoned the paths of virtue, and died in abject poverty. It is nearly twice the thickness of the former, and is well organized and healthy in its appearance."

An engraving of a third skull is given from the cabinet of professor Smith of Baltimore, which averages nearly *one inch* in thickness and appears in every respect healthy and natural. This of course is nearly eight times thicker than that represented in the first drawing, and is a striking illustration of the impossibility of ascertaining the amount of brain by measuring the exterior of the cranium.

But Dr. Sewall is not content with confounding his opponents, he literally overwhelms them in this "Pelion upon Ossa" argument—he goes on to remark:

"But in order to render this part of the investigation more satisfactory and conclusive, I have instituted

a series of experiments, in order to ascertain the exact amount of brain in the skull, compared with its external dimensions. These experiments were made under the immediate inspection and by the assistance of Dr. Thomas P. Jones of this city, and professor William Ruggies of the Columbian College; gentlemen whose high scientific character ensures the utmost accuracy in the results. I am much indebted to these gentlemen for the aid they have afforded me. In the first series of experiments, we ascertained the volume of each brain, the skull included; in the second series, the volume of the brain alone, or the capacity of the cerebral cavity.

"Then, in order to render the difference in capacity more obvious, the volume of each skull, the brain included, was reduced to the dimensions of seventy fluid ounces.

"This table shows the result of these experiments, as extended to five of the skulls delineated in the plates.

Vol. skull, br. included.	Vol. brain.
Plate II. fig. 1, 70 oz.	56.22 oz.
" fig. 2, "	51.72
III. "	46.21
IV. "	34.79
V. "	25.33

"In five skulls, therefore, of the same external dimensions, we have a difference in the amount of brain between

I. and II.	of	4.50 oz.
I. " III.	"	10.01
I. " IV.	"	21.43
I. " V.	"	31.89

"In this computation we have a difference in the volume of brain, contained in two skulls of the same external dimensions, of 31.89, something more than one half. These experiments have been extended to a great variety of crania, not here delineated, which confirm the above estimate, and show that the external dimensions of the skull furnish no indication of the amount of brain.

"I hold it then to be clearly established, that no phrenologist, however experienced, can, by an inspection of the living head, ascertain whether an individual has a skull of one inch, or one eighth of an inch in thickness; nor whether he has 56.22 ounces of brain in volume, or only 25.33 ounces."

We commend this extract to the particular attention of Dr. Spurzheim's followers, and we rather opine they will find it a "knot," which, like a certain one we read of in ancient history, can be more easily cut than untied.

The next point considered, is—how far it is practicable to ascertain the degree of development of the different parts of the brain, by measurement or examination of the living head.

"In the investigation of this part of the subject," professor S. remarks, "we shall find that anatomy interposes numerous obstacles to the practical phrenologist, the more important of which I shall briefly notice.

"1.—Of the frontal sinuses. These are cavities situated in the anterior and lower portion of the frontal bone. To show the manner in which they are formed, it is proper to state, that the bones of the skull are composed of two tables, external and internal, and

that these are united by an intervening lattice work of bony matter called diploe.

"In some parts of the skull, this diploic structure is absent; the two tables recede from each other, and cavities of greater or less extent are thereby created. It is in this manner that the frontal sinuses are formed.

"Plate VI represents, by a horizontal section, the skull of an individual whom I well knew. He was an athletic, laboring man, who became intemperate, and died at the age of thirty. During his life, I frequently remarked, that he had what would be called by phrenologists, a fine head for the perceptive faculties. His eye was deeply ensconced under a full projecting brow, and the organs of form, size, weight, color, order, number, eventuality, individuality and comparison, were uncommonly well developed. His locality was enormous. We should, upon the principles of phrenology, have pronounced him a Rubens in painting, a Humboldt in arrangement, and in form, size, and weight, a Wren, a Douglas or a Simpson. The development of his comparison, eventuality and individuality, would have placed him by the side of Dean Swift and the Earl of Chatham; and his locality represented him as quite equal to Columbus, Newton, Volney and Sir Walter Scott.

"But what do we find upon examination after death? we discover the frontal sinuses to extend over the organs of eventuality, individuality, form, size, weight, color, locality, order, time; and comparison; the two tables of bone separated in some points at the distance of an inch, and the intervening cavities so capacious as to measure one and a half fluid ounces.

"Here then, are ten of the organs, of which no correct judgment can be formed, as to the degree of their development in the living head. From the large frontal sinuses, delineated in this plate, I have skulls, in which they are seen of almost every intermediate size, to those which measure only a few grains."

He next speaks of the difficulties arising from the thickness of the temporal muscle—one of the principal muscles of mastication, and which from its situation necessarily conceals a number of the phrenological organs. He also states, that the two tables of which the skull is composed are not parallel to each other, and that no phrenologist, therefore, who discovers a protuberance on the skull can determine whether it is caused by a fulness of the brain, at that part, or an increased thickness of the bone.

The great number and diminutive size of the organs too, present a serious obstacle to the phrenologist in ascertaining their fulness, as well as their actual position. In the forehead, for example, there are no less than fourteen pairs of organs crowded together in the compass of a few square inches: a space scarcely equal to a single pair of organs belonging to the department of the propensities, or that of the moral sentiments, and all concealed by the frontal bone.

"How" then, he asks, "is the phrenologist to know, when measuring the head, whether the skull is thick or thin, whether the frontal sinuses are large or small, and whether the protuberances which he finds on the head represent corresponding developments of the brain, or are occasioned by an increased thickness of the skull at the places where they exist." After presenting several other considerations, bearing upon the general question,

which our limits compel us to pass over, our author goes on to strengthen his argument, from the fact that nothing has been deduced in favor of phrenology from all the various and complicated injuries inflicted upon the cranium and brain, and accounts of which have been preserved in the records of medicine.

"The idea that the brain is composed of a plurality of organs, and that each has its own appropriate functions, has elicited every argument which could be brought to its support. To sustain the proposition, volumes have been written, experiments have been made, and the records of medicine and surgery, have been ransacked in pursuit of facts.

"If the brain be composed of a plurality of organs, as represented by the figured head, each of which is the seat of a separate faculty, it necessarily follows, that when any one of these organs is injured or destroyed, its faculty must be injured or destroyed also.

"Yet in all the mutilations of the brain, to which man has been subjected for two thousand years, it appears that the records of surgery do not furnish a single well authenticated case, in which the loss of a particular faculty has happened, according to the organ on which the injury was inflicted, while the other faculties remained unimpaired.

"We learn from the researches of Haller, Dr. Ferrier, and numerous others, that a vast variety of cases are recorded, in which large portions of the brain have been actually destroyed, and in so many parts of the head, as to dispose of nearly all the phrenological organs in turn, and that not a single case has happened of such partial destruction of intellect, as must have occurred if the doctrine of separate organs be true; and we can hardly find a surgeon who has not met with cases in his practice, where portions of the brain have been destroyed by wounds, the consequences of which fully confirm the statement of these writers.

"In many of these cases, blindness and deafness have been produced, motion and sensation destroyed, and all the intellectual faculties suspended; but there has not been a destruction of a particular faculty of the mind while its other powers have remained untouched. How then, can it be, after the lapse of so many ages, that there are no facts of this description to confirm the doctrines of phrenology? Certainly it cannot be for the want of an opportunity for observation.

"To say nothing of the accidents of private life, there is scarcely a naval or military battle, in which cases of injury of the phrenological organs are not met with in abundance; and yet the science derives no support from this source."

He then inserts an interesting surgical case, copied from the *American Medical Intelligencer*, for April 1837, in which a boy, eleven years old, received a kick from a newly shod horse, that fractured the right superior portion of the frontal and the adjoining portion of the parietal bone. A portion of the bone an inch and a half long was driven in upon the brain, which was otherwise so much injured as to prove fatal on the forty-third day. The space of the skull, previously occupied by the right anterior and middle lobes of the cerebrum, was found, upon a post-mortem examination, to present a perfect cavity, the hollow of which was filled with some sero-purulent matter—the lobes having been destroyed by suppuration. The third lobe was much disorgan-

ized, &c. The other most important points in this case are noticed in the following remarks of Dr. Sewall: "Here then is a case, in which all that portion of the brain, which has been assigned by phrenology to the intellectual functions, viz:—Individuality, Form, Size, Weight, Coloring, Locality, Order, Time, Number, Tune, Language, Comparison, Causality, Wit, Imitation, Eventuality and Wonder—was found in a state of disease and disorganization, and yet not one of those functions destroyed or impaired. And it should be borne in mind, that not one hemisphere of the brain only was found diseased, (for in such an event, the phrenologist would say, that although one hemisphere was disorganized, the other being healthy, the sound half performed the functions of both, as the brain is composed of two symmetrical portions,)—but in this case the anterior lobes of both the right and left hemispheres of the brain were diseased, and to an extent which precludes the possibility of any mental operation, being performed by them. Take, in connection with these facts, the position of the phrenologist, that the periphery or external portion of the brain is that in which the mental operations are performed, and what becomes of the doctrine of a plurality of cerebral organs, or a separate compartment for each of the mental functions? As well may we talk of walking without legs, or seeing without eyes, as to suppose this youth capable of those intellectual functions which phrenology has placed in the anterior lobes of the brain, if the doctrine of separate compartments be true. Under all this devastation of cerebral organization, what was the state of the boy's mind? 'The boy's faculties,' says the surgeon, 'were not destroyed, but there was some intellectual confusion, from the time of the injury, during the operation, and for two hours after, from which time he recovered every faculty of the mind, and they continued vigorous for six weeks, and to within one hour of his death, which took place on the forty-third day.'"

Professor S. presents various other cogent and forcible reasons for believing phrenology to be absurd in theory and unfounded in fact; but for these, we must refer our readers to the work itself, with the assurance that its perusal cannot fail to afford them both entertainment and instruction.

In conclusion, we cannot better express our own estimate of this highly interesting publication than in the language of the *London Monthly Review*:

"There is the reasoner, the practical expounder and the calm, dignified, and self-possessed refuter, exemplified in every page."

GHOSTS.

The universality of the belief in ghosts, is generally brought forward, as an argument in favor of their existence. But it appears to me not to be one. I think that it may be explained on rational principles. Besides their belief in ghosts, all nations have also had one in other supernatural beings. But the imaginary beings of different regions have always differed widely in the character assigned to them. Thus in Asia, we find a belief in ghouls and genii—beings whose assigned character differs widely from that given to the fairies

of western Europe. As these beings do not really exist, there must be some tendency in the human mind to imagine their existence. And this tendency, it appears to me, consists in an inherent desire, which all men have, of assigning to every effect a cause. To men in a barbarous state, there are innumerable operations of nature, which they cannot account for: there are, particularly at night, many sounds floating through the air, and many appearances of natural objects whose cause is concealed. Men then, on account of this tendency which I have supposed, are led to solve the difficulty, by imagining them to be the work of supernatural beings. After the idea of such essences is once conceived, many qualities and attributes are quickly given them, as is well exemplified in the number of those assigned to the Grecian gods. The characteristic features attributed to these beings, is the joint work of the disposition of the people, of whose imagination they are the product, and of the nature of the country which that people inhabits. And thus their differences are owing to variations in these particulars.

Now the reason that ghosts are more universally believed in than any other supernatural essence, is—1st, That it is very natural to suppose that those with whom we have lived in terms of love or friendship will not desert us, if possible, even in death. 2nd, on account of this feeling, and the tendency which I have supposed above, it is more natural for men to attribute effects, whose cause is unknown, to the spirits of the dead, than to imagine other beings in order to account for them. 3rd, As these circumstances are common to all mankind, this belief has therefore been universal.

Williamsburg, Va.

G.

THE ORPHAN.

We made her grave by starlight,
And laid her down to rest,
And bade the sod press lightly
Upon her poor old breast.

Have you seen a friendless orphan,
Of every tie bereft,
Adown this cold world wander,
Uncared for and unblest?

Come view with me this low bed,
On a dark and lonely dell,
And listen to my numbers,
While I her story tell.

In far Britannia's green isle,
Her birth-place and her home,
Mid flowery meads and gay dells,
Her feet were taught to roam;

A father kissed her bright cheek,
And smoothed her sunny hair;
A mother, for her loved one,
Breathed forth affection's prayer.

And oft by summer evening,
When day-light toil was o'er,
Her sisters in the moonlight
Played by the cottage door.

The bugle's blast o'er mountain,
O'er hill and dale afar,
Call'd forth the valiant-hearted,
To scenes of distant war.

The sire obey'd the summons,
And 'mid the cannon's roar,
Poured out his dearest life-blood
Upon a foreign shore.

And she, the tender-hearted,
His glory and his pride,
Like a pale floweret blighted,
Bow'd down her head and died!

And thus bereft and lonely,
The little orphan stray'd,
Mid scenes of carnage only,
By tumult's din dismay'd.

But God, who times the tempest
To the lambkin newly shorn,
Preserved this houseless lone one,
From many a pelting storm.

And tho' through all her journey,
Of four score years and ten,
Neglected, poor, and lonely,
Her days and nights have been;

Think not no beam of mercy
Illum'd her darksome lot,
For God regards the mourner,
Tho' by the world forgot.

Peace to thy slumbering ashes;
Let no rude foot molest;
Peace to thy ransom'd spirit—
In Heaven enjoy thy rest.

Camden, S. C.

MECKLENBURG

DECLARATION OF INDEPENDENCE,

*Again considered; with remarks upon the resolutions of
May 31st, 1775.*

The June number of the Southern Literary Messenger, contains an article on the Mecklenburg Declaration of Independence, the direct object of which is to deny the authenticity of that instrument as published, and, in its tendency is insidiously calculated to impeach the motives and injure the character of those venerable patriots who have given their solemn testimony in its favor. The writer wishes the public to know that these Mecklenburg resolves of May 20th, 1775, are spurious—a base imposition practised upon the community, and should no longer receive that share of attention they have hitherto commanded. This, we believe, is the obvious meaning of his article. And upon what does this grave denial, this reckless disregard of well-authenticated facts depend? Upon an old newspaper, discovered by Peter Force, Esq., of Washington City, containing certain patriotic resolutions passed by a committee in Charlotte, May 31st, 1775. These resolutions are seized upon, by "Investigator," with unusual avidity, and without paying a decent regard to the pious exhortation, "Stop, poor sinner, stop and think," so important in worldly matters as well as in ethics, are proclaimed to the world as the original Mecklenburg Declaration of Independence! Alas! to what extremes prejudices

will carry mankind! Enough, it was thought, had appeared in the pages of the Messenger, editorial and communicated, to satisfy every impartial inquirer on this subject. In the few remarks we now intend to make, we disclaim controversy—but shall proceed to examine briefly in what manner this subject has been investigated in the article above alluded to, and inquire if that knowledge of facts, value of testimony, or honesty of deduction has been evinced in its production, as might have characterized its author. We think it may be made apparent, if Investigator had ever read the Mecklenburg resolves, and accompanying proceedings, with any other motive in view than to cavil, he might have found therein a satisfactory solution for any mystery, to which the resolutions of May 31st might have given rise, and their origin consistently accounted for. In the account of the Mecklenburg Convention, we are informed of the appointment of a “standing committee of public safety,” whose duty it was to meet at stated periods and transact such business as the exigency of the day demanded. Before this committee, “clothed with civil and military power,” were arraigned all tories, and persons suspected of being inimical to the “American cause.” It exercised much wholesome and efficient authority, and recommended various measures of a prompt and decisive nature, which “had a general influence on the people of the county to unite them in the cause of liberty and the country.” Now, we ask an impartial community, may not these resolutions of May 31st have emanated from this “committee of public safety,” and does it not comport more with fair and honest inference, to conclude that such was the case, than to adopt the disingenuous artifice of pronouncing them identical with the Mecklenburg Declaration passed eleven days before, “in presence of a large, respectable, and approving assemblage of citizens?” A few of this “large assemblage,” are still alive to testify to the proceedings of the 20th of May, and delight to narrate this “deed of noble daring” with all the patriotic ardor so common to the veteran soldier; thus verifying the glowing sentiment of Miss Leslie:

“The warrior’s soul lights up and shines
When memory fans the fire,
And gallant deeds of former times
The martial tale inspire.”

An impartial public will not, without due investigation, thus basely repudiate the high and unimpeachable testimony of a noble phalanx of revolutionary worthies. The Mecklenburg Declaration of May 20th, and the resolutions of May 31st, which Investigator heralds to the world, will be found, “upon comparison,” to be entirely different; the one emanating from an unusually large “convention” of delegates and people of the county unanimously adopting independent measures; the other, only such patriotic proceedings of a legislative character, as occurred frequently at that excited period, without any thing attending their publication to make an indelible impression on the memory, and, in reality, never existing, or regulating the community as therein recommended. In the exasperated state of the public mind that then existed, it is not surprising that “committees” met frequently, and that their proceedings should be marked with a spirit of resistance. With these facts before us, in offering a rational explanation of these resolutions of late discovery, is there any propriety or necessity of adopting the forced and illiberal construction which “Investigator” is pleased to advance?

Were this the only consistent view that could be taken of this matter, the community might rest satisfied. But there is another mode of accounting for them, drawn from the history of the state, touching this eventful period, which we will briefly notice, and leave for others to determine. It will be recollected that on the 24th of April, 1775, nearly one month previous to the adoption of the Mecklenburg Declaration, the royal governor of North Carolina was compelled, in consequence of the fearful array of popular movements in view of the palace at Newbern, to take shelter on board “his majesty’s ship Cruiser.” We forbear giving a detail of the train of interesting events which led to this first gubernatorial expulsion, constituting, as it does, one of the brightest pages in the early history of the state. It is here passingly alluded to, to show, that at this early period there existed much maturity of opinion on the subject of independence; the people were actually living under a whig government, and, consequently, no where felt the restraints of royal

authority. In every section of the state, the great principles of liberty, and the “unalienable and inherent rights of man” had been sedulously inculcated by the distinguished whig leaders of the day—to them the people were ardently attached, and to them they anxiously looked for a removal of grievances. Upon the memory of such men as a Johnston, a Harvey, an Ashe, a Hooper, a Caswell, an Iredell, a Polk, with many others, pioneers in the cause of liberty, the patriot delights to dwell. Under the auspices of such men, the provincial congress of 1774 was called into being, comprising the virtue and intelligence of the people. In this congress, the delegates of each county and town were instructed to have elected “county committees,” whose duty it was to have the resolves of congress properly executed, arrest tories, and consult for the general good. These “county committees,” soon sprang into existence at the recommendation of the delegates, and proved one of the most useful instruments employed in the revolution of public opinion. They held four regular sessions during the year, but from their great facility of assembling, were in the habit of meeting at “short notices” for the transaction of any important business. History informs us, they sometimes “usurped the authority of the county court, and subjected the gravity and reason of the law to the control of the popular will.” This conflicting jurisdiction, however, did not “uproot the foundations of civil society,” as predicted by governor Martin;—on the contrary, their imprudences were amply atoned for by the good they accomplished. “They exercised, rigidly, a political censorship, and did not hesitate to subject to the penance of a dungeon all persons convicted of disrespectful language towards the American cause.” That they held frequent meetings throughout the year 1775, we have abundant proof in the history of the state, and proclamations of governor Martin, denouncing them as “traitorous” and “seditious combinations,” and “subversive of his majesty’s government.” And again, we ask, may not these resolutions of May 31st have emanated from this “committee,” deriving its authority from a provincial congress? At this distant day it is, perhaps, impossible to say with which committee they originated—either might have passed them, and it is now a matter of little moment to which we ascribe their paternity. The flame, kindled at the battle of Lexington, continued to rage with unabated fury throughout the state, and was the active excitant in the Mecklenburg Convention of May 19th and 20th, of promoting the adoption of the most stern and declarative measures. The same soul-stirring argument—the “inhuman shedding of blood” at Lexington—is heard and felt, in the proceedings of the “Cumberland Association,” one month afterwards, (June 20th.) These “associations” prevailed extensively during the year 1775, and, although only a few of their acts, breathing the most spirited tone of resistance, have reached our times, shall we reject these as spurious, unworthy of a “local habitation and a name,” because they have not yet been found in the pages of a newspaper, and thus fall within the limits of our narrow prejudices? The proceedings of these “associations,” and a few other patriotic meetings, as well as the Mecklenburg resolves of May 20th, have come down to us in a properly authenticated manner, and they all await the same doom—a rejection or reception by an impartial public. The Mecklenburg Declaration was found among the valuable papers of the late General William R. Davie, in all respects a proper depository of such a record, and to whom we have evidence a copy was sent. This copy, now in the executive office at Raleigh, somewhat torn, and bearing all the marks of age, is entirely legible. A bare inspection of this venerable paper is well calculated to produce a favorable opinion of authenticity in the mind of any superficial or incredulous investigator of this subject. But apart from these explanatory views relative to a consistent accountability of the resolutions of May 31st, have we not the most direct and specific testimony? The late Col. William Polk of Raleigh, says, he was “present on the 20th of May, 1775, and heard his father, (Col. Thomas Polk,) proclaim independence to the assembled multitude.” And need it be inquired, will he be believed? The proclamation of independence on such an inspiring occasion, was well calculated to make a deep impression on every interested spectator. The late General Graham, of Lincoln, a citizen and soldier worthy of the best days of the republic, and noted for his general intelligence and accurate knowledge of revolutionary events, says, “During the winter and spring preceding that event, (Declaration of Independence,) several popular meetings of the people were held in Charlotte; two

of which I attended. On the 20th of May, 1776, besides the two persons elected from each militia company, (usually called committee-men,) a much larger number of citizens attended in Charlotte than at any former meeting—perhaps half the men in the county. The news of the battle of Lexington, the 19th of April preceding, had arrived. There appeared among the people much excitement. After reading a number of papers, as usual, and much animated discussion, the question was taken and they resolved to declare themselves independent."

This is but a small part of General Graham's testimony; but our prescribed limits will compel us to pass over much of its interesting historical matter. Need it be inquired throughout the range of his acquaintance, "was he deceived, or can he be believed?" The testimony of the late Rev. Humphrey Hunter, of Lincoln, who, in the commencement of the revolutionary struggle, laid aside, for a time, his academical studies—his engagement with books, to join in the engagement with men—is equally specific, clear, and satisfactory. He left behind him a manuscript "Journal of the war in the South," describing every battle in which he was an actor, and every important transaction which he witnessed. He says, in connexion with this subject, "Orders were presently issued by Col. Thomas Polk, to the several militia companies, that two men selected from each corps, should meet at the court house on the 19th of May, 1775, in order to consult with each other upon such measures as might be thought best to be pursued. Accordingly, on said day, a far larger number than two out of each company were present." The resolves, as heretofore published, are then given. "These resolves having been concurred in, by-laws and regulations for the government of a standing committee of public safety, (above alluded to) were enacted and acknowledged. Finally, the whole proceedings were read distinctly and audibly at the court house door, by Col. Thomas Polk, to a large, respectable, and approving assemblage of citizens." But will we be told all this is *spurious* or *fabricated* testimony? So deep an impression had this magnanimous and early step by the citizens of Mecklenburg made on the writer's memory, that in an account of "General Review" in Charlotte, in 1812, seven years before the first public agitation of this subject, by the editor of the Raleigh Register, we find the place and the occasion eliciting a passing tribute of veneration to this illustrious transaction. After saying "One hundred soldiers, exempted by law from military duties, were present," and that "a large majority of these were veterans of the revolution," he adds, "It is also worthy of remark, that not a few of these well-tried patriots had paraded on that same ground in 1775, and anticipated Congress in a Declaration of Independence." The testimony of John Davidson, one of the signers of the Mecklenburg Declaration, sustaining the above statements, has been adduced. He also furnished a copy of one of the original certificates, granted by Abraham Alexander, chairman both of the Mecklenburg Convention and the "Committee of Public Safety." It ran in the following words:

"North Carolina, Mecklenburg County,
November 28, 1775.

These may certify to all whom they may concern, that the bearer hereof, —, is allowed here to be a true friend to liberty, and signed the association.

ABRAHAM ALEXANDER,
Chairman of the Committee of P. S."

This was the *test of patriotism*, with which every individual friendly to the American cause was required to be furnished; so vigilant were the measures adopted by our forefathers in guarding the sacred privileges we now enjoy! Other testimony equally clear and specific might be cited from published and unpublished sources, but as this subject was discussed somewhat in detail, in a former number of the Messenger, we deem it unnecessary to multiply proof. Long before the first public announcement of this subject in 1819, the citizens of Mecklenburg knew and appreciated the noble deed. It was not a vague and uncertain tradition of the passage of a few patriotic resolutions of a bold character, of which several of the colonies could even then boast, but it was the adoption of a Declaration of Independence that made the distinguishing and indelible impression. When public attention was first called to this subject, it was not so much to remove any doubts that had arisen, as to supply the knowledge of a memorable transaction in the history of the state, which was known to be notoriously deficient, not

only in this, but in several other important respects. Added to this, many of the respectable witnesses would soon pass from time to eternity; and hence, not only the honor due to the actors, but the cause of truth pointed out the necessity of publishing to the world the important fact, and the indubitable basis upon which it rested. It is worthy of remark, that several of the most conspicuous actors in the Mecklenburg proceedings of May 20th, were active and influential members of the provincial congress, which convened in Halifax a little upwards of ten months afterwards, (April 4th, 1776.) We accordingly find that the same spirit of independence which characterised the Mecklenburg Convention above all other "meetings" of the people or their "committees," also shone conspicuously in this Congress, and gave birth to the first legislative recommendation of a national declaration. As this report on the subject of independence is not extensively known, we subjoin it as an important historical document:

"The select committee to take into consideration the usurpations and violences attempted and committed by the King and Parliament of Britain against America, and the further measures to be taken for frustrating the same, and for the better defence of this province, reported as follows, to wit:

"It appears to your committee, that pursuant to the plan concerted by the British ministry, for subjugating America, the King and Parliament of Great Britain have usurped a power over the persons and properties of the people unlimited and uncontrolled; and disregarding their humble petitions for peace, liberty, and safety, have made divers legislative acts, denouncing war, famine, and every species of calamity, against the continent in general. The British fleets and armies have been, and still are daily employed in destroying the people, and committing the most horrid devastations on the country. That governors in different colonies have declared protection to slaves, who should imbrue their hands in the blood of their masters. That the ships belonging to America are declared prizes of war, and many of them have been violently seized and confiscated. In consequence of all which, multitudes of the people have been destroyed, or, from easy circumstances, reduced to the most lamentable distress. And, whereas, the moderation hitherto manifested by the united colonies, and their sincere desire to be reconciled to the mother country on constitutional principles, have procured no mitigation of the aforesaid wrongs and usurpations, and no hopes remain of obtaining redress by those means alone which have been hitherto tried, your committee are of opinion that the house should enter into the following resolve, to wit:

"Resolved, That the delegates for this colony in the continental congress, be empowered to concur with the delegates of the other colonies in declaring independence and forming foreign alliances, reserving to this colony the sole and exclusive right of forming a constitution and laws for this colony, and of appointing delegates from time to time (under the direction of a general representation thereof,) to meet the delegates of the other colonies, for such purposes as shall be hereafter pointed out.

"The congress taking the same into consideration, unanimously concurred therewith."

Upon comparison, it will appear that a striking similarity of language is common to this short state paper, and the national Declaration of Independence. Yet who accuses Mr. Jefferson of intentional plagiarism? It is not strange, that men who have been long accustomed to think alike should also speak alike. It is not strange, when high-toned patriotic feelings seek for utterance, and the cause of liberty was the ever-present, soul-stirring theme, that men should express themselves in similar or identical language. Neither is it strange that many choice phrases should be currently used, and fondly remembered. Such expressions as "inalienable" or "inherent rights," "dissolve the political bands," "absolve all allegiance," "pledge to each other our lives, our fortunes," &c., or "sacrifice" or "risk our lives and property," with many others that might be named, were peculiarly the language of the times. The sentiments eloquently embodied by Mr. Jefferson, were not peculiar to himself, but adopted by him as expressive of the common feeling in the emphatic language of that eventful period. We particularly allude to those expressions upon which is built the theory of plagiarism. In conclusion, under whatever aspect this whole subject is viewed, the honest inquirer will see no propriety of adopting "Investigator's" gratuitous assumption of a forgery of resolutions for the 20th of May. Against this cheap and summary process of settling questions, the candid reasoner

will revolt and enter his willing protest. The imposing circumstances under which the Mecklenburg Convention was called into being, its duration, (two days,) the subject discussed, (Independence,) and the applause with which the proceedings were received by a large and admiring audience, were as fitly calculated to rivet the attention, and make a lasting impression on the memory, as any other prominent and interesting occurrence of the revolution. We now dismiss our remarks to the careful investigation of an impartial public, prepared to await its rightful decision, under whose award the subject can only properly rest in peace.

C. L. H.

August 31, 1839.

THE BACHELOR BESET;

OR, THE RIVAL CANDIDATES.

The house of Mr. Singlesides was situated in one of the pleasantest parts of the city; it was a snug, commodious building, painted white, with a pretty varandah, green venetian blinds, and modestly overtopped by a slate-colored roof. Before the door was a prim looking row of trees, trimmed into proportions exactly corresponding with one another, and the whole fenced in by a white paling, along the top of which ran a cornice, garnished with a formidable array of sharp nails or spikes, which presented a military air of defiance. Besides these defensive appliances, the dwelling was guarded on the sides and in the rear, by a high brick wall, which showed a no less hostile aspect, being surmounted by fragments of bottles that threatened laceration to all who should attempt to reach its height. From the neatness and order of all around, one might readily conjecture this to be the abode of "single blessedness;" and so it was—for Zachariah Singlesides was fast hastening towards his grand climacteric, and from his first verging to manhood up to the present time, love had never sweetened or embittered his draught of life; and it was a source of much self-gratulation, that amid the vicissitudes of our ever whirling sphere, woman had not influenced his destiny. A bachelor, with avowed principles of abhorrence to the matrimonial contract, which principles have been vigorously and consistently sustained through a long series of years, is not often liable to become an object of speculation to the fair sex. In the instance of Mr. Singlesides, his pertinacious resistance on first commencing life, to the advances of the ladies, had established a conviction, that nothing short of a miracle could uproot feelings and prejudices, confirmed and strengthened by time—and, that the thawing of a glacier or an iceberg would be quite as feasible an undertaking as that of attempting to melt the frozen ramparts around his heart.

If in his youth and manhood, therefore, he had been irritated by the arts of the designing, they had long since ceased to ruffle his serenity. He revelled *ad libitum*, in the "funny and free revelries" of a bachelor, and if the din of connubial devilries smote upon his ears in the quiet of his orderly domicile, he would devoutly bless his stars that he was exempt from the evils which distracted his neighbors and acquaintance.

Among other blessings enjoyed by Mr. Singlesides, was that of having his household conducted in the quietest and most methodical manner possible. His domestic arrangements moved onward with that noise-

less precision, so desirable, yet so rare. His servants performed their several offices like the invisible wheels and springs of a time piece, the results of which appear to the eye, without any material interruption to the other senses. His garden was laid out with mathematical skill, and in happy accordance with his conceived opinions of taste. Each walk and bed had its boundary of stiff box wood—and bachelor's hat, with southernwood or old man, were conspicuous embellishments to almost every parterre. In proof, however, that Mr. Singlesides was not so illiberal as to allow his antipathy to the ladies to militate against his professed admiration for plants and flowers, a particular spot in his garden was appropriated to the culture of old maids, whose stiff stems and dusky red petals occupied a small space of earth; and lady slippers, maiden's blush, heart's ease, and even love in a puff, were likewise permitted a place. It must be confessed, however, that he appeared tacitly to consider this portion of his garden as an infected district, for he had caused an intervening row of tall shrubs to be planted, so as to intercept it as much as possible from observation, and when disposed to take a turn in his garden, always carefully avoided that particular spot.

Returning home, sometimes worn and harrassed by every-day cares and professional labors, he never felt the want of those pleasing sympathies of conjugal affection, which numbers have so feelingly depicted. When he closed his door upon the world, it was with very opposite emotions—he had within him a sweet consciousness of quiet and security, unmingled with fearful anticipations of sour looks and squalling notes from wife and children.

On the opposite side of the street, directly facing the house in which Mr. Singlesides lived, stood the mansion of Miss Betsy Bud, an elderly gentlewoman, who had survived the expectation, at least, if not the hope, of matrimony. When the reminiscences of past days were sometimes made the tea-table chat of a group of respectable matrons, whose youth had been cotemporary with that of Miss Bud, many a racy joke relative to her love adventures was recollected and laughed over. But age seemed to have dried up every avenue to the tender passion in the heart of Miss Betsey; it was believed that the fire of her juvenile days had burnt out, and though its violence had been extreme, all now regarded her as an extinct volcano.

Although within a convenient distance for watching the movements of the bachelor, she was never detected in the unbecoming act. Her eyes, those "outlets of the soul," were discreetly confined to her own household, and if Mr. Singlesides proved his liberality by suffering lady slippers and old maids to occupy a corner of his garden, Miss Bud with true feminine pride, had rendered bachelor hats and bachelor buttons contraband plants in her well organized flower knots. This prudent line of conduct sufficiently demonstrated that she not only abstained from evil, but even from its appearance; for though it may be heroic to face and overcome temptation, still that prudence is commendable which guards against objects calculated to awaken desires known from past experience to be fruitful of discontent and disappointment. Whatever, therefore, had been Miss Betsey's juvenile follies, the tongue of malevolence could not now find a single fragment of indiscre-

tion on which to base a tale prejudicial to her character. It is true, she was sometimes peevish and ill-natured; but who, that has the control of several unruly maid servants, would not be the same? And then the equanimity of her temper was frequently interrupted by the midnight revelries of neighboring cats, who, entering her premises, would scratch and scramble over her favorite beds of violets and camomile, root up her catnip with unsparing effrontery, and scare her slumbers with terrific serenades.

The respective positions which Mr. Singlesides and Miss Bud maintained in society, were not only similar as bachelor and maid, but they were, moreover, both governed by the wise principle of discharging diligently their own concerns, without breaking in upon the rights of others. Their views, however, were not extended to the promotion of universal good; for having long lived isolated from all domestic and social ties, they cared little how the machine of civil life worked, provided it did not interfere with themselves. Unfortunately though, for the peace of these two individuals, there occurred an unusual number of marriages. Many elderly young ladies, about to hang their harps upon the willow, unexpectedly found themselves converted into brides. Indeed, one wedding succeeded to another with such startling rapidity, that all trembled, lest their turn should come next. In the midst of this revival, one who had been an intimate of Miss Bud, but who like herself had remained single, moved off the stocks. On learning this news, her ancient associate reddened, and unhesitatingly pronounced her a "fool;" but notwithstanding this harsh and hasty censure, there was soon a visible change in the manners and deportment of Miss Bud. The very next Sunday, succeeding the event, she was seen at church, decked out in a style of unusual juvenility, and her usual sanctimonious air changed for one of unbecoming levity. In one so notoriously circumspect, the gaiety of her attire and obvious inattention to the ceremonies of the day attracted the notice of all, and it was decided without a dissenting voice, that the wonderful metamorphosis of Miss Bud could only proceed from the brisk way in which the matrimonial market was looking up. The favorite meal of Mr. Singlesides was breakfast. It was a repast he loved to linger over, though his table was crowned with the simplest fare—for he was as abstemious as a camel—but with a newspaper, his slippers slipshod, and leisurely nibbling a crust of dry toast, occasionally softened by an appeal to his cup of coffee, his moments flew by on angelic wings. To have interrupted him at such moments, would have occasioned serious annoyance; therefore, his well disciplined attendant, after quietly placing his meal before him, would instantly withdraw, leaving him to the luxury of feeling "never less alone, than when alone."

Now, it happened, while Mr. Singlesides was enjoying his solitary repast, the day after Miss Bud's profanation of her venerable person by youthful gewgaws, and of the Sabbath by indecorous demeanor, that the door of the bachelor's hall was assaulted by a repetition of raps, which quickened the steps of Mr. Singlesides' sedate waiting-man, who was curious to know who demanded admittance at this unseasonable hour. Upon opening the door, a demure looking damsel manifested herself, holding a neat waiter, on which was a covered

saucer overspread with a milk-white napkin. Poor Jacob looked aghast, when "Miss Betsey Bud's compliments, and saucer of marmalade of her own making," were presented to his master, and for a while he remained in a delicate dilemma, at a loss how to proceed—his natural politeness pleading in favor of instantly repairing to Mr. Singlesides with the sweets of Miss Bud—and on the other hand, restrained by habitual respect for peculiarities to which for many years he had been subservient. Our bachelor, at the moment, was poring over one of those long presidential messages, which none but a most inveterate newspaper reader could have finished to an end, when Jacob broke gently, like "the morn on tip-toe," into the apartment, and in a subdued voice disclosed the purport of his errand. To a man who had long considered himself as free from female impertinence, as if an inhabitant of that paradise into which woman is never supposed to enter, the effect was stupifying. Speedily recovering himself, however, and shrinking from the marmalade as if it had been the gum of the deadly upas, he peremptorily ordered it to be returned, and too much discomposed to resume his employment, made a covert retreat from the house by the back door.

From a minute chain of evidence, it was apparent to all that Betsey Bud was getting mischievous. The pointed rebuff her first advances had received, threw her into disorder, and gave a momentary check to her motions, but with the characteristic perseverance of her sex, she quickly rallied her scattered energies and recommenced hostilities, though in rather a more cautious manner.

There was at the back of Mr. Singlesides' dwelling a vacant lot—this, Miss Betsey rented, and presently, from the hitherto barren enclosure, was seen to sprout a flourishing young plantation of the *morus multicaulis*. This bold manœuvre of taking the bachelor in the rear, was concealed under the prevalent silk-worm fever, though some were ill-natured enough to hint that her design was to make a cocoon of Mr. Singlesides, by enveloping him in meshes of her own spinning; yet the more benevolently disposed, considered her as only acting up to the spirit of the times. It requires but one ingenious projector to set afloat a novel design, for thousands of others to imitate it, were it not for the wise and valuable security of a patent; but, unfortunately, there was no legal authority to secure to Miss Betsey an exclusive right to the conquest she meditated. Like the intrepid and enterprising discoverer of our continent, she was doomed to see others press into the new world, which she had vainly hoped would be left for her alone to possess.

It was not long before the bustle of cleansing, white washing, and the removing of furniture, in a fine brick tenement just next door, attracted her notice, and she learned, to her unspeakable dismay, that a young, handsome, and sprightly widow, was to become its tenant. That woman who has been able to secure a first husband, is always suspected of understanding the art of entrapping a second. Pangs of jealousy, and dread of rivalry, began to assail the bosom of the spinster, who resolved to keep an eye on the movements of her new neighbor, in order to ascertain whether there was any solid grounds for apprehension. Alas! for poor Miss Betsey Bud, she never cast a glance in the direc-

tion of the brick tenement, but she saw either the bust of Mrs. Gossamer, prominent from a window, or a full length figure of the same individual, placed in a picturesque attitude on the portico. The widow had a brilliant voice: throughout the evening the street was filled with music, as ever and anon she broke out with a fragment of a popular ditty, or brought to light the memory of some sweet bard, whose numbers deserving immortality, have been swept away among the rubbish of past ages. Though not apt to combine causes with effects, Miss Bud shook in her shoes at the possible emotions that might be created by the melody of this enchantress. In her youth she had read Alexander's feast, and in terror she recalled the different passions inspiring the conqueror by the apposite measures which burst or breathed from the lyre of Timotheus. She, herself, had once enjoyed the reputation of a sweet singer. In an association called the Seraphic Society, whose object was the cultivation of sacred music, she had even acquired the soubriquet of Seraphina. But since her time, music, like almost every thing else, had changed its style and character; and when striving to imitate the light grace, with which the widow run or rather flitted up an octave, Miss Betsey's efforts resembled the gobbling of a turkey, or the more discordant notes of a donkey. With the occupation of watching her rival, setting snares for the bachelor, and attending to her other numerous engagements, the duties of a diplomatist were not more fatiguing and complicated. But Mrs. Gossamer was the sorest evil with which she had to contend; her mind dwelt incessantly on the subject, until the lovely widow became the incubus of her sleeping and waking visions. Penetrating the careless intractability of her disposition, Miss Betsey concluded it best to redouble her efforts to gain access to the good graces of Mr. Singlesides, before weapons from that quarter could affect him. In consequence, she busied herself more than ever with her morus plantation, and even went to the expense of having a neat little coconery erected in the centre of the lot, where she was sure to be found at those hours when Mr. Singlesides was at home, ostensibly engaged in superintending the progress of the building. The lot was not only in the rear of the bachelor, as has already been remarked, but also adjoining his garden, so that often when he was inhaling the evening breath of his flowers, the bony arm of the spinster thrust through the paling, to gather a sprig of verbena, or her long neck stretched over the shrubbery like a camelopard's, would startle and drive him away. Never was a bachelor so beset! If he took a retrospective glance, there was the spectral form of Betsey Bud, standing in grim relief, like the apparition of a disturbed conscience, while a forward view showed the attractive widow, with siren smiles, luring him to his destruction.

There was one stroke of Betsey's policy, which seemed to promise greater success than any she had tried; this was, having gained Jacob, as she believed, over to her interest. But this was not exactly the case. Though no ways anti-matrimonial, this faithful servitor was not particularly desirous of serving under a gynarchy, while on the other hand he was not destitute of feelings of gratitude for services rendered him by Miss Bud, which he endeavored to maintain consistently with his fidelity to his master. When, therefore,

any delicacy arrived, Jacob would secretly receive it, and return a polite message of thanks in the name of Mr. Singlesides. From certain expressions that had reached her ears, Miss Betsey concluded that she was much indebted to her confidant for the gracious manner with which she was led to believe her presents were received, and in consequence looked upon success as more than probable. Coinciding in the opinion, that "the surest way to a man's heart, is down his throat," she continued to attest her tender regard and her housekeeping abilities, by blackberry cordial, squeezed by the magic hand of love, custards, and nuts, picked in unbroken halves from the shell, to give zest to a glass of madeira—with a catalogue of other dainties, like the smaller articles in the stock of a dry-goods merchant—too tedious to enumerate. Nor was this the only way in which her talents and ingenuity were exercised. She had contrived to ascertain, that a mat was wanting for the argean lamp, which stood upon the centre table in the bachelor's parlor. Immediately the requisite materials for working in worsted, were procured, and seated in a becoming attitude at a front window, Miss Bud commenced a bird of paradise. Day and night she toiled, first at the head—then at the tail—till at length, starting from the canvass, appeared the gorgeous inhabitant of the torrid zone, arrayed in even greater splendor than when seen on fluttering pinions, beneath its own fervid suns. This working in *cruel*, was literally *cruel* work both to the person by whom it was executed, and for whom it was designed. When it was handed in to Mr. Singlesides, carefully wrapped in the folds of a perfumed pocket handkerchief, he angrily bade the handmaid to be more particular in future, and not pester him by mistaking one house for another. When the girl returned with this evidently wilful misunderstanding on the part of Mr. Singlesides, Miss Bud retired to her chamber to weep, and to calculate the cost of her mat, which, having regarded frantically for a few seconds, she consigned to the depths of a large trunk, to rest among other woollen articles which her precaution had buried in tobacco, to prevent the incursion of the moths.

It is not uncommon in a concern where matrimony is the subject, that what was at first entered upon merely as a matter of speculation, ends in becoming an affair of the heart. At the commencement of her undertaking, from simply having in view a change of name, Miss Bud now imagined herself deeply and irrevocably in love. Alas! she was indeed a *bud* with a canker concealed within it.

Mrs. Gossamer, the charming widow, was precisely one of those kind of women, who are adored by the gentlemen, and detested by the opposite sex. There was just sufficient freedom in her manners to lead her innocently, and without a suspicion of being at all liable to censure, into those trivial breaches of prudence which the censorious delight to seize upon and magnify into glaring improprieties.

From the number of beaux who daily worshipped at her shrine, Miss Betsey's apprehensions of her as a rival were somewhat allayed, until a circumstance transpired to put in agitation all her former fears and suspicions. Miss Bud was one evening, as usual, stalking among her morus, feigning to be busy in gathering leaves for her voracious pets, the silk worms, when who

should enter Mr. Singlesides' garden, but Mrs. Gossamer! There she was, advancing gaily along the middle walk, without gloves, bonnet or shawl; her hair floating over her face and neck in bewitching negligence. The apparition of one from the nether regions, could not have more astonished Miss Betsey, the sensitive Miss Betsey Bud, who quivering and shivering, remained gazing at her with distended eyeballs. This bold step of the widow was indeed taking the bull by the horns. She ran about, smelling first one flower and then another, when Mr. Singlesides appeared at a window. "Your garden is charming," cried she, to him, in a voice whose cadence lingered delightfully on the ear. "You must excuse my trespass—the temptation is so great"—and her concluding words were accompanied with a "wreathed smile," as she continued waiting in expectation of an answer. Whether it was the powerful spell of beauty, or that the bachelor had not quite forgot himself to stone, yet irritated and perplexed as he was, he certainly made an effort to be gracious. He muttered some words not exactly intelligible, and waved his hand with an action somewhat resembling the motions of a dead body under the effects of a galvanic battery, yet which might admit of the interpretation of a welcome.

Betsey Bud felt as though she could have challenged her to single combat. She surveyed her with the emphatic glare of a dragoness, and would assuredly have spoken, if, at the instant, Mr. Singlesides had not retreated from the window, and Mrs. Gossamer from the garden.

From this time forward, the sole aim of Mrs. Gossamer seemed to be the captivation of the bachelor. Perceiving his partiality for flowers, she never came into the possession of a rare plant, without sending him a cutting; and whenever he was the least indisposed, her inquiries never ceased until the object of them was restored to health.

These soothing attentions, in seasons of indisposition, Miss Bud had been most unaccountably deficient in, for which, on reflection, she sincerely reprehended herself, determining hereafter to repair her fault; and it was not long before an occasion offered for her doing so. The bachelor was seized with an acute attack of rheumatism. Miss Betsey early apprised of it, immediately dispatched a long message of regret and condolence, accompanied by the skirt of an old red flannel petticoat, on which was pinned a certificate, penned by herself, highly commendatory of its virtues from her own personal experience. Whether these virtues were ever put to the test in the instance of the invalid, is uncertain; for although Jacob in his anxiety to relieve his master, tried each recipe that poured in from the widow and maid, yet he might prudently have rejected this, from a fear that Miss Bud meant to intimate by this sanguinary banner, that she intended to give no quarter. During this distressing spell, she was never for one moment off her guard; her voice varied only from piano to pianissimo, and she stepped about as noiselessly as time.

Now the widow was not so circumspect, but, as usual, had had her bevy of beaux paying their evening homage. Though not absolutely vain of her vocal powers, Mrs. Gossamer never enjoyed herself more, than when making melody either with a select knot of amateurs, or warbling to one entranced listener; and it

was difficult at such moments to determine, whether her voice, her harp, or her smile was most bewitching. Betsy Bud enjoyed the thought of what a happy contrast her humane behavior would present, when viewed with the levity of her rival, and enjoyed these concerts, not for their harmony, but for the discord they were likely to produce.

It was a bright beautiful night in July, when all within the vicinity of the pretty widow's residence were awakened by a group of serenaders, who were striving with all their skill to impart to the fair object of their gallantry some idea of the music of the spheres. The weather was intensely warm, the upper windows of every house in the neighborhood were opened to catch any breeze that might stir—and carefully screened within a lace net, from those nocturnal disturbers of repose, the moschetos, lay Mr. Singlesides. It had been a restless night with him until the last half hour, when sleep had kindly visited his pillow; but he was recalled to the miseries of life, by the noise of the musicians. The hour which brought them there, was not only an evil one to the bachelor, but also to his guardian angel, Jacob, who, worn with the fatigues of attending his patient, was most unfaithfully slumbering on his post. Ever since his master had lain quiet, Jacob's head had commenced a bobbing motion, similar to that of a beligerently disposed goat; but his master's voice roused him—and he arose, scratching his head and staggering to the window. "Close in those shutters," cried Mr. Singlesides, loud enough to be heard on the other side of the street. "Gracious goodness," responded Miss Bud, frisking from her couch, "they have waked him up."

Miss Betsey's love had arrived at such a pitch, that she never could, when speaking of Mr. Singlesides, pronounce his name. She generally ran through the whole declension of the pronoun *He*. "Shameful," she continued, elevating her voice so as to be overheard—"such downright barbarity!" "he has not had a wink of sleep"—"it will ruin his health"—"it will be the death of him." Although the dog star was raging, Miss Bud modestly enveloped herself in a large cloak, and advanced towards a window, whence she could indistinctly discover the figure of Mrs. Gossamer, hid behind a curtain, peeping down upon the serenaders. "This ought not to be encouraged," she said, firing at the sight of the widow—"the civil authority should interfere"—"our police regulations are scandalously lax"—"and such a valuable life as his is." Here Mrs. Gossamer gave a faint titter, which was echoed in a corresponding key by one of the party below. "Gentlemen," called Miss Bud, "there is an unfortunate individual in this neighborhood, who is extremely ill—will you please to move further off with your music." A brisk chorus from the serenaders was the only reply; and in an agony of imaginary distress, Miss Bud paced from window to window, wringing her hands, and tearing the border of her night cap. "Mrs. Gossamer," she again began, "though I have not the honor of your acquaintance"—these words were delivered in a tone of mock emphasis—"I take the liberty of speaking, to request you will endeavor to silence this uproar." "Madam," answered an impertinent young fellow of the group, "we shall play and sing as long as we feel inclined;" and he immediately struck up in a comic voice,

"Nobody coming to marry me, nobody coming to woo."

Slam went the widow shutters, crash, down upon the sill came the sash, and flap into bed went Miss Bud, vowing eternal enmity to Mrs. Gossamer and every other widow extant.

Mr. Singlesides now arose and seated himself, with a groan, in the silver rays of the magnificent orb which streamed full into his apartment. It was just such a moon as a lover or poet might have apostrophised,—by turns brightly beaming, or partially overshadowed by drifting fragments of dark clouds. But Mr. Singlesides had no pretensions to either character; he was a thing entirely apart from the romance acting beneath the lattice of the young and gay, and he could only continue to groan and protest against “the intolerable racket.”

“Upon my honor,” whimpered Miss Bud in a sympathetic tone, “this is too bad”—and up again she sprung and rolled herself in the cloak and unclosed the window—“Gentlemen,” she called in a voice of mild expostulation—“there is in this immediate neighborhood a valuable life at stake”—but a voice in which the very soul of the singer seemed embodied, as he stood with uplifted face towards the window of Mrs. Gossamer, drowned her quivering accents; and before Miss Bud could summon resolution to speak again, the serenading party withdrew, as the closing line of the song, “Yes, till death I’m thine,” died upon the air.

It was not long ere Mr. Singlesides was able to resume his ordinary occupations; but the serene delight with which he used to return home from the fatigues of his counting-house, was completely destroyed. His means of ingress and egress were so entirely under the surveillance of his indefatigable persecutors, that he seriously meditated the plan of having a communication cut through the side of the house, leading into the alley, and which at last he triumphantly saw executed. But here the superiority of woman’s wit over man’s ingenuity, was manifested—for Miss Bud, by enlarging the borders of her mulberry domain, rendered this avenue of escape even more exposed to her vigilance than the two others. The poor “beset” one, knew not what to do: he was attached to his house, its location, and every thing about it, but to live in such incessant thralldom was out of the question, and in a fit of spleen and despair, he put an advertisement in the “Morning Herald,” offering it for rent. Miss Bud was congratulating herself on the manner in which she was gradually drawing a line of circumvallation round her prey, when the notice of Mr. Singlesides’ projected removal caught her eye, and perplexed to know what had caused so sudden and unlooked for an event, she determined to find it out.

Mr. Singlesides was usually so very methodical in his movements, that in his hours of going from and returning to his home, there rarely occurred the deviation of a minute, and Betsey, as soon as she saw him leave the door and turn the corner of the street, screened her head in a large dove-colored caleche, threw over her lean shoulders a strip of black lace, and tripping over the way, was soon heard knocking at the highly burnished rapper of the bachelor. Jacob heard and obeyed the summons, but was somewhat reluctant to admit the lady, who came under pretence of examining the house before engaging it for a friend. Recollecting, however, that as his master never returned until half an hour before the hour for dining, there could be no great harm in complying with her request, he at last ushered her in

with true African urbanity. Besides wishing to know Mr. Singlesides’ motive for renting his house, Miss Bud was actuated by another powerful principle of curiosity. She wished to inspect every thing about the bachelor’s establishment; so after putting a few leading questions to Jacob, while she peered into every nook and cranny, she made a feint of retiring; but no sooner had Jacob withdrawn, than slipping off her shoes to prevent being overheard, she stole stealthily upstairs, thinking to have a peep into the bachelor’s bed-room, although her maidenly delicacy strongly argued against the step. But, “when a woman deliberates, she is lost,” and in went Miss Bud in breathless trepidation. She was charmed with every thing she saw—such exquisite order, combined with such solid comfort!—such a display of just taste in the pattern of the bed and window curtains! “not gaudy but neat.” While in this state of delicious excitement, she fancied she heard advancing steps and voices. Poor Betsey Bud flew about the room like a pent up rooster, and quite as red. Once she felt inclined to take a desperate leap from the window, but her courage forsook her, and again she scampered and fluttered about in agony. By some accidental circumstance, Mr. Singlesides had returned to his house very soon after having left it, and the first object that presented itself on entering, was Mrs. Gossamer, seated near the centre table, negligently turning over the leaves of a book she had taken from it. With a slight excuse for her freedom, she named her desire to look at the house, which she proposed renting, as it appeared far preferable to her own. The “beset bachelor” internally groaned, as he perceived how fairly he had rendered himself liable to female impertinence and intrusion; but hoping that his misery, which now seemed to have reached its climax, would soon have an end, he exerted himself to make a show of civility, while he conducted the widow through the rooms on the first story. To preclude any further examination, he remarked that the upper part was precisely on the same plan; but this would not satisfy Mrs. Gossamer, who declared that she never engaged a house without first having made herself intimate with the geography of it. “So come, Mr. Singlesides,” she cried, gaily—“lead the way.” “You will excuse me, madam,” said the bachelor. “Indeed I will not,” said the undaunted widow, running towards the staircase, followed by Mr. Singlesides. “Into every room except *this*,” he said, placing a resolute hand on the lock of his chamber door. “Nay, but I must, sir.” “Impossible, madam.” “I am determined upon it.” “Ma’am, I swear—.” “Come, do not swear, for I am resolved to have a peep into this Blue Beard chamber of yours.” “You cannot enter ma’am; if you choose to overstep the bounds of propriety, I do not.” “Nonsense, Mr. Singlesides, your opposition only inflames my curiosity.”

At this critical juncture, Miss Bud, nearly driven out of her wits, was just in the act of hiding under the bed. She was entirely concealed except one long leg which protruded from beneath the valance, when the door flew open, and in came Mrs. Gossamer. “Gracious Heaven!” exclaimed she, starting back with well feigned surprise—“what do I behold! Really, Mr. Singlesides, had I known—could I possibly have anticipated *this*—pardon me, sir—but I must say, it is the last sight I should have expected to see. O! for shame, Mr. Sin-

glesides—a man of your unblemished reputation; really, I am shocked—amazed—disgusted.” “Madam,” cried Mr. Singlesides, glaring at Betsey’s leg, “I solemnly affirm that I do not know to whom that limb belongs.” “Impossible, sir; I would swear to it among a regiment of legs.” “Your knowledge far surpasses mine, madam,” cried the bachelor, elevating his voice to a higher pitch, and stretching out his clenched fist—“I again solemnly protest that I know not to whom that limb belongs.” “Then I’ll venture to assert you are among the very few men of the city who are unacquainted with the leg.” “That’s a cruel, shameful slander,” screamed Miss Bud, struggling from her hiding place. “Miss Betsey Bud, by all that’s dreadful!” exclaimed Mrs. Gossamer with a theatrical start. “Yes—the woman you would injure in the tenderest point,” said the weeping spinster. “O, Mr. Singlesides,” she continued—“I am placed in an extremely delicate situation—I can scarcely explain myself, my situation is of such a delicate nature—I feel faint—overcome—harts-horn, if you please—drops of any description.” “There is nothing of the kind about this house,” said Mr. Singlesides—“it is not used to be troubled with hysterical females; and I must say, ma’am, that your appearance here gives rise to most unpleasant suspicions against me.” Miss Bud attempted to give an account of herself, frequently interrupting her scarcely coherent narrative, with floods of tears. Mrs. Gossamer regarded the scene with an incredulous smile, when at length she said, “Well, I never saw more spirited acting than is displayed on both sides. Really, Mr. Singlesides, and Miss Bud, you would do well to enrol your names among the first strolling company you meet. But I will intrude no longer, and in future I shall take care how I enter a bachelor’s house.” With these words, she indignantly withdrew.

“I am forever undone,” whimpered Betsey Bud; “she will proclaim it from one end of the town to the other.” “And I shall be slandered and laughed at,” thought Mr. Singlesides, who was peculiarly tenacious of his fair fame. “I never can survive disgrace,” squeaked Miss Bud—“I shall certainly imitate the chaste Lucretia.” “Do not say so, Miss Bud.” “Indeed I shall put an end to myself.” “Oh! Miss Bud.” “Upon my honor, I will commit some dreadful act.” “You talk rashly, madam,” cried the bachelor, who perceived that Betsey would suffer as much from the blasting breath of calumny as himself, and in a fit of unnatural pity he made her an offer of his hand!

Mr. Singlesides had never before been so much excited; his discretion and judgment were completely under the dominion of the contending feelings at work in his breast, or he never could have terminated the scene by such a magnanimous act of self immolation.

Miss Bud returned home with very different emotions from those with which she had left it. She seemed to tread on air, and could scarcely behave herself with due decorum on the occasion. Before his excitement had subsided, Mr. Singlesides wrote a note to Mrs. Gossamer, explanatory of the recent occurrence, and closing with an earnest request that it might “never be made the subject of discussion.” The lovely widow was warbling her sweetest strains to a pale, intellectual looking young man, who was hanging over her entranced, when this was handed in. “Is that a billet-

doux from one of your thousand admirers?” asked he. “It is from your uncle,” replied Mrs. Gossamer. “From my uncle! what can he possibly have to correspond with you about?” “It is in reference to a laughable adventure—I will tell it you;” and she began a relation of the late rencontre.

From her account it appeared, that Mrs. Gossamer had seen Miss Bud in Mr. Singlesides’ bed-room, and believing something ludicrous might result from it, particularly as she had seen the bachelor on his way home, she went to his house on pretence of renting it, and purposely insisted on being admitted to his sleeping apartment.

It furthermore appeared from the conversation that ensued, that a deep and romantic attachment existed between the narrator and the person that listened, who was nephew to Mr. Singlesides, and heir of his fortune, provided he remained single during life. Mrs. Gossamer’s attentions to the uncle, therefore, were intended to propitiate his good opinion and induce him to reverse the order of his will; and Mr. Singlesides being ignorant of the preference entertained by Mrs. Gossamer for his nephew Frederic, naturally appropriated the attentions to himself.

“Then you have done for yourself with my uncle,” said Frederic, laughing. “Not at all—I have a capital plan; it has this moment struck me. Return here in an hour and you shall hear of a way in which you may gain your uncle’s consent to our marriage.” Instead of either a written or verbal message from the widow, as he had imagined, Mr. Singlesides was startled by the unceremonious entrance of that person herself. “There is only one condition, sir,” she abruptly began, “on which I will consent to keep secret what I have seen.” “Name it, madam,” said Mr. Singlesides, apprehensive of some new evil. “That you will make me your wife, sir.” “Impossible, madam; I—I—.” “No apologies, sir—we understand each other I presume—good day.” “Stay, Mrs. Gossamer—I cannot—.” “O well, sir—no compulsion; you may do as you please, you know.” “Really, Mrs. Gossamer, if I could consistently—.” “I repeat, you can do as you please, Mr. Singlesides; but believe me, I shall not keep silent; indeed I shall go to the expense of having caricature cuts engraved of the whole scene—not omitting the memorable leg discovery.” The vision of the bow window of a book-store, stuck full of these execrable prints, was too much for our bachelor, and, just as the widow was making her exit, he recalled her, and in faltering accents assented to the proposed terms of accommodation. “Am I in my senses?” asked the unfortunate bachelor, as soon as the light form of the widow had escaped through the door. “Do I really exist? Yes,” he added, reasoning with Descartes, “I think, therefore, I exist.” Burying his face in his hands, he continued in this attitude many minutes, until aroused by the entrance of a person whom he recognised as his nephew. Frederic gazed at his uncle with an inquiring eye, remarked his haggard appearance and expressed the greatest apprehension about his health. “Something extraordinary must afflict you,” said he; “and I hope you will not refuse me the privilege of sympathising with you.” Mr. Singlesides’ emotions were too violent to be pent up in his own breast. He told his distressing entanglements, and even asked for advice. “I will

not only advise," said Frederic, (being previously instructed by Mrs. Gossamer,) "but also make a proposition. I will myself marry the widow, provided you annul the clause in your will which disinherits me in case of my marrying. As for the maid, you must leave her without explanation or apology. Your secret will be safe, when Mrs. Gossamer is your niece."

Mr. Singlesides had too long appreciated the blessings of liberty, not to seize the first occasion to release himself from shackles, with which the delirious excitement of a moment had encumbered him. Very soon after the interview between the uncle and nephew, the widow and the latter were united under the roof of Mr. Singlesides, who bestowed a substantial benediction on them by settling a liberal annuity upon the bride.

Meanwhile Miss Bud remained immersed in matrimonial preparations—alas! too premature. She did not fail, however, to remind her intended husband of her existence, by repeated messages and presents, which were almost entirely disregarded.

There was an unusual air of bustle and confusion about the quiet and orderly domicile of the bachelor; who himself was busily employed in superintending the packing of several trunks, with a countenance on which was strongly impressed mingled feelings of satisfaction and regret. A gentle tap at the door, drew his attention—it was a maid with a plate of batter-cakes and Miss Betsey's compliments. "D—n Miss Betsey," cried Mr. Singlesides—slamming the door in her face. The following hour he was off to Texas.

Miss Betsey Bud—but we will draw a veil over her sorrows. No, we will leave it for an instant unclosed, and just glance at her as she paces frantically from room to room, calling out in allusion to Texas, "Well, well indeed, may it be called 'rogue's refuge.'"

Macon, Bibb County, Georgia.

M. G. M.

DO YOU REMEMBER?

TO ANNA.

I.

Do you remember how our childhood's hours
Were spent in wandering through the forest shade,
Weaving our garlands of the sweet wild-flowers
That on the air a pleasant fragrance shed?
And how we sat beside the flowing brooks?
Watching the sun-fish glitt'ring in the stream,
While unchecked joy spake in our very looks,
And all was peaceful as an infant's dream,—

Do you remember it?

II.

Do you remember our old favorite tree,
Spreading its boughs of foliage, thick and dark,
And how you clapp'd your little hands to see
The letters of your name carved in its bark?
And all the cares and sport we had at school;—
How long I tarried when you were detain'd;
And when the mistress placed me on the stool,
While others laugh'd and mock'd, how you were
pain'd,—

Do you remember it?

VOL. V.—96

III.

Do you remember, too, how many a time
Through the lone church-yard we together trod,—
And the sweet music of the Sunday chime
That called the village up to worship God?
How near the altar-spot we had our seat,
E'en in the holiest of that holy shrine;
And how we bow'd with awe and reverence meet
Beneath a feeling which we *knew* divine,—
Do you remember it?

IV.

Do you remember, too, our fireside meetings—
The many pleasant faces gathered there,
The words of friendship and the cheerful greetings;
And our "dear grandpa's" high-back'd, cushion'd
chair,
In which he sat, his tender stories telling
To friends that hung upon each moving word,
While in their eyes, the quiet tear-drops welling,
Told of the deep effect of what they heard,—
Do you remember them?

V.

Do you remember, cousin, the warm tears
You shed, while clasp'd so closely to my heart,
And how I tried to soothe your rising fears;
On that sad morning when we had to part?
And how I told you all that I had dream'd,
In young ambition's most propitious hour,
Of untrod heights of fame, whose summits seem'd
Above the common hopes of men to tower,—
Do you remember it?

VI.

Do you remember me, while far away
From all those friends in whom I took delight,
And cherish my remembrance day by day,
And meet me in the visions of the night?
And while I tread temptation's dangerous path,
And see my fond hopes blasted, one by one,
Meeting with scorn and frowns, and slights and wrath,
Will you, sweet cousin, love me fondly on,
And still remember me?

New York, Sept. 17, 1830.

THE GOOD AND THE BAD.

The good generally attribute the actions of persons to better motives than the bad; and this is very natural. For the latter having been often impelled by such motives, can more easily imagine others to act from their influence, than the former can; who must necessarily have but a faint idea of such feelings, never having themselves experienced them. In fact, they both generalize from themselves to others.

If the world be as bad as some assert, I should suppose that a knowledge of human nature would conduce very much to our own fall. For, by habit we may accustom ourselves to any thing; and the constant sight of vice deadens our horror for it; seeing also so many around us doing wrong, we will be apt to consider it not very heinous for us also to act thus.

G.

ADDRESS,

Delivered before the Horticultural Society of Maryland, at its Annual Exhibition, June 6, 1839; by Zac. Collins Lee, Esq.*

LADIES AND GENTLEMEN OF THE

MARYLAND HORTICULTURAL SOCIETY:

At your request I appear this evening to discharge a pleasing duty, and offer with you on this fragrant and pure shrine of Nature, the homage and gratitude which these her gifts of fruit and flower demand.

From the engrossing and dull pursuits of artificial life—from the marts of commerce and the feverish paths of politics and ambition, we here solicit all ages and classes to unite in a festival and taste a cup unmingled and unembittered by selfishness or pride.

Had I consulted my own just estimate of the occasion, and my unfitness to make it interesting or useful, the duty I now perform should have been declined; but there was something so refreshing and beautiful in the associations of your society, that I yielded rather to instinct and feeling than to judgment, and determined to throw myself upon the same kind opinion and indulgence which had called me to its discharge.

The anniversaries of national disenthralment and renown are stirring and patriotic in themselves—but the very achievements they celebrate, have been won by the blood of patriots and the sufferings of a whole people—the laurel and the willow entwine the chaplet on the hero's brow; and many a tear for the gallant dead, saddens the 'flowing bowl' in which their deeds 'are freshly remembered.' In other lands less favored and free than our own, the waving of banners, the falchion's gleam, and the roar of cannon, proclaim too often the sanguinary triumph of power over civil liberty—and the proud pageant is darkened by the retrospect of battles, the sack of cities, the burning of villages, and the flight and massacre of thousands, before the conqueror's sword. Even in the earlier days of chivalry and romance, with the tilt and the tournament, where was sung and commemorated

'Knighthood's dauntless deed,
And beauty's matchless eye'—

there, alas, so servile and degrading a barrier separated the lord from the serf, that it robbed these heroic jubilees of that freshness and attraction which freedom alone bestows.

But this, your anniversary, simple and unostentatious, though it be, is, compared with *those*, the refreshing shower, and the balmy air, after the thunder-cloud has burst, and the summer heat has passed away. It is the union of all that is useful with all that is beautiful—the rainbow of the fields, displaying every color and fraught with every sweet.

Surely then, if the smiles of Heaven ever descend, it must be upon a scene like this—for you have come

*In accordance with our previously expressed determination, not to be restricted altogether to original matter when a good selection is at hand, we take great pleasure in spreading before our readers a rich and delicious repast in the address of Zachæus Collins Lee, Esq., delivered before the Horticultural Society of Maryland, at its annual exhibition in June last. We trust that none of our readers, and especially our fair readers, will think of laying down the Messenger until they have admired with us this beautiful literary gem.—[Editor S. L. C. Mes.]

up here, the young, the beautiful, the aged, to behold and adore the wisdom and benignity of Him, whose wonderful works are now spread out before us, and to whom human pageants are 'as sounding brass and a tinkling cymbal,'—for 'the lilies of the valley are his, and Solomon in all his glory was not arrayed like one of these.'

Upon an occasion of such unalloyed interest and pleasure, it would ill become me to detain you with any labored or scientific dissertation, even had I the ability or the time to do so: I therefore choose rather to dwell on some of the more obvious advantages of your society, and enforce upon the public attention, the claims it so irresistibly presents to more general and zealous support.

The Maryland Horticultural Society was formed in 1832, by a few gentlemen of taste and education, who then determined to give to the long neglected subject their attention; and among its officers and members at that date, will be found several beloved fellow citizens, now no more, associated with many who are still its friends and patrons—they subsequently obtained an act of incorporation, which in its preamble declares the object to be, an association 'for the purpose of improving and encouraging the science and practice of horticulture, and of introducing into the state new species and varieties of trees, fruits, plants, vegetables and flowers.'

The first annual exhibition was held in June, 1833; and at this, its sixth anniversary, it presents to the public the most cheering evidences of its beneficial and successful progress. To an increased list of members, it has added and united by its own attractive pursuits, many of our admired and spirited townswomen, whose zeal and devotion have already imparted a charm and impulse to the society, not to be resisted by the most selfish and obdurate benedict or misanthrope; while, apart from these attractions and resources, it is now giving life and energy to innumerable cultivators of the soil, by awarding weekly and annual premiums to the most enterprising and successful among them, and thereby affording to industry and taste a stimulus, and to horticulture a prominent place among the sister arts. Indeed the present exhibition of flowers alone, might challenge competition in our country, while the rapid improvements manifested in the culture of fruits and vegetables since the society's foundation, will speak its best eulogy: and the regret must now arise, that in this, our Baltimore, distinguished for the beauty and moral loveliness of her daughters, and the valor and public spirit of her sons, so many years should have been suffered to elapse in which the culture of the garden and the husbandry of the field (taught us thirty years ago by the West Indian emigrant) were without this great auxiliary and stimulant, and that more regard and attention is not now given to the society.

Around us, and on every hand, our hills and valleys are blooming with the growth of almost every plant and tree; and we are in our walks and rides enchanted by the rich scenes which open from some adjacent and once barren spot, where, 'emparadised in flowers,' the cottage of the horticulturalist peeps forth to win the heart and gratify the eye.

Our markets too, in the abundance they offer and the returns they make to the industrious and thrifty farmer and gardener, will convince you, that interest as well as pleasure, are moving onward, hand in hand, in the dif-

fusion and enlargement of the society's benefits—while by its direct agency, every foot of ground near our city, and landed property generally in its neighborhood, is rapidly enhanced in value; and by being converted into gardens and rural retreats, afford even to 'the dull edge of sated appetite,' some luscious fruit, or early plant and vegetable, before strangers to our boards—and then the ornamental trees which embosom so many cool sequestered country seats, where the invalid and man of business may repair for renovation and repose—all proclaim, with most 'miraculous organ,' the usefulness and the elegant and refined pleasures of horticulture.

The great Roman orator declared in one of his finest orations—that there was no better pursuit in life, none more full of enjoyment or more worthy a freeman, than agriculture. The same may be said of the kindred art which gave birth to this society: and Lord Bacon, the great master of human learning, has borne testimony to its value, in an essay on this subject, in which he describes gardening and horticultural avocations as the purest of human pleasures as well as the greatest refreshments to the spirits of men; and considers the perfection of this art, as the indication of a nation having attained the highest degree of civilization and refinement. He says, in his quaint language, 'when ages grow to civility and elegance, men come to build stately, sooner than to garden finely, as if gardening were not the greater perfection.'

The sacred volume also breathes throughout its holy pages, the sanction and encouragement of rural and innocent pursuits; and the Creator, by placing our first parents in a garden—a paradise—

* And place of rural charms and various views,
With groves whose rich trees wept odorous gum and balm,
Where flowers of all hues, and without thorn
The rose untended bloomed?—

seemed indeed to indicate the preference and favor which the husbandman and gardener would ever receive at his hand.

Profane history has brought down to us its mythology and civil rites, associated and invested with fruits and flowers; and the song of the Bacchanal and the lute of Pan, tell of the clustering grape and the overhanging bough. But the knowledge of plants was then greatly limited, and few, very few of the wonderful creations which modern botany has since disclosed, were known or regarded.

The revelations of the Creator to the tenants of Eden, doubtless discovered to them such productions of the earth as were necessary to their sustenance; but the Bible only speaks of the three general divisions of the vegetable world, into the *grass*, the *herb* and the *tree*; and Solomon, the most celebrated for his botanical knowledge, enumerates particularly the Mandrake, the Cedar of Lebanon, and the Hyssop that groweth on the wall, as most prominent in his day.

For centuries afterwards, botany was but the humble hand-maiden of medicine and surgery; hence we find the balm of Gilead extolled in Judea as the panacea of all diseases, and of more inestimable value than all our modern panaceas for the assuaging of the ills that 'flesh is heir to.'

The heroic age added little or nothing to the preceding period, unless indeed the fabled gardens of the Hesperides and Aleinous, in which Homer has placed 'the

reddening apple, the luscious fig, the glowing pomegranate, the juicy pear, the verdant olive, and the bending vine, can be regarded as bright exceptions—these being the offspring rather of poetry than mother earth.

From the days of Theophrastus to those of Pliny, during an interval of nearly four hundred years, there had been only enumerated about six hundred plants, regarded more for their medicinal than nourishing qualities, and the account we have of them is very indistinct and unsatisfactory. Following came on the darker ages, in which the few known arts of life shared the sad fate of civil liberty, leaving to the world the discovery, by a few Moorish and Arabian physicians, of one or two herbs—such as Rhubarb and Senna, which are now recognised in our *materia medica*.

The Roman era, deriving, as it did, its taste for gardening from Greece, to the extent it had gone there, opened a wider field to its cultivation. Numerous beautiful passages in the Latin poets, prove the high estimation in which gardening was held among the Romans: Tacitus describes a palace built by Nero, which was on a site laid out on the principles of modern gardening; he says, 'the usual and common luxuries of gold and jewels, which adorned this palace were not so much to be admired, as the fields and lakes and flowers, which here and there opened in prospects before it.' But it is to modern times we must look for the revival and creation of botany as a *science*. Gæssner, Haller, and Linnæus, established for it a system of investigation, by which thousands of new and rare productions were added to the catalogue of Ceres and Flora. These great high-priests of nature, reduced at once, to fixed principles and invariable rules, the study—and by the classification of plants according to their natural affinities, demonstrated, that like man, their domestic life was regulated and sweetened by the presence of the gentler sex, and their being depended upon constitutions and habits peculiar to themselves.

In England, during the reigns of Henry and Elizabeth, much of the taste and natural beauty of the gardens of Rome were lost sight of, and substituted by an artificial and grotesque deformity, which maintained for many years, and which, by torturing the box, the yew, and evergreens, into the shape of beasts and other whimsical forms, degraded the standard of horticulture; so that many of the English gardens of that period are described, as being adorned with yew trees in the shape of giants—Noah's ark cut in holly—St. George and the dragon, in box—cypress lovers, laureline bears, and all the race of root-bound monsters which flourished, and looked tremendous around the edges of every grass plat.*

But a better spirit soon succeeded, and the works and philosophy of Dr. William Turner, the father of English botany and gardening, gave a right direction to its pursuit, and added countless treasures to the researches of his predecessor—and by the innumerable varieties of shrubs and flowers, to which he gave 'a local habitation and a name,' the sea-girt island became the home and nursery for almost every tree and plant; and it is now to the annals of English agriculture and gardening, that we look for the most valuable improvements in the useful and ornamental departments of horticulture.

* See the eloquent address of Mr. Poinsett, in 1836, before the Horticultural Society of South Carolina.

The science of botany, being thus founded solely on the natural affinities and fixed laws of vegetation, the great masters to whom I have referred, raised it at once from being the obscure handmaid of medicine, to be the most enlarged and delightful study to which the head and heart of man could be devoted. The poorest plant and the most unobtrusive flower that 'blushed unseen,' under their hands in a moment unfolded the mysteries of its being and the hidden lore of nature. For, if the flowers on the mountains and in the valleys, are the alphabet of angels, with which they have written secret and divine truths upon the hill-tops, how doubly attractive must become a study, which shall disclose the loves of those angels or the higher destiny of man.

Standing as we do, at an immeasurable distance from the olden time—living in an age and land where all who have the spirit to be free, or the virtue to be just, may become public benefactors—how strong are the calls which duty and interest, in every art and department of life, make on us, to be active and beneficent in our efforts. If we cast our eyes over the world, its past and present condition, how infinitely exalted appears the physical and intellectual resources of our generation.

The face of nature too, is more prolific and interesting, and exhibits ten thousand beauties and benefits, unknown to past ages. The history, therefore, of the vegetable world, written as it now is, in every language and on every green field, developed then but little compared with the present hour, in which we have assembled to celebrate its triumphs, and to behold, by the light of truth and christianity, what was denied to the darker eras of man.

But the great temple of nature, though thus opened, is not explored; beyond us there are many meandering streams and flowery fields to be traced, and hidden treasures to be discovered. The promised land rises in bright perspective, and our children must finish what has been commenced by us—kindling brighter lights, and erecting nobler altars to nature and religion.

What a theatre for horticultural effort does our own country afford? The vegetation of the United States is as various as its climate and soil. In the Floridas grow the majestic palm, the orange, the cotton, the indigo and the sugar-cane. In the Carolinas, the eye of the traveller is charmed with the beauty and grandeur of the forest trees, the evergreen oak, the various species of pine, walnut, and plane tree, the splendid tulip, the curious cypress, and the superb magnolia,—while the oaks, the firs, and the chestnuts of the middle and northern states, afford to the naturalist a rich scene for investigation and study.

Already ten species of the walnut are distinguished for their use and beauty, in the soil and in manufactures; and as many of the maple, the spruce, the hickory, and the larch; most of them, now transplanted to our gardens, and public pleasure grounds, are the objects of daily converse and admiration.

There, too, is the giant sycamore, the king of our western forests, exhibiting in its growth, a fit emblem of the vigorous and hardy race, who people the young but glorious west. It rises, as Mr. Washington Irving has described it, in the most graceful form, with vast spreading lateral branches, covered with bark of a brilliant white. These hundred white arms interlacing

with the other green forest trees, form one of the most striking traits of American scenery. A tree of this kind near Marietta, measured fifteen feet and a half in diameter; and it is said, that Judge Tucker, of Virginia, obtained a section of such a tree, put a roof to it, and furnished it as a study, which contained a stove, bed, and table, making a comfortable apartment.

Horticulture is domesticating the birch, the elm, the acacia, and the poplar, and beautifying our gardens with the magnolia, the holly, the almond, and the Catalpa, and many others, whose existence was almost unknown to us ten years ago.

Some of the most luscious fruits we now prize and cultivate, are strangers to our soil. Modern horticulture, within the last two centuries, has domesticated them. The fig was brought from Syria, the citron from Medea, the peach from Persia, the pomegranate from Africa, apricots from Epirus, apples, pears, and plums from Armenia, and cherries from Pontus—to Rome they first passed, then to Europe; and with our progenitors many of them became the pilgrims of freedom in America.

Public gardens of any note and extent, owe also their establishment to modern times. The first known in Europe, was that of Lorenzo de Medici, in Florence: afterwards the celebrated botanic garden of Padua was planted, and flourished in 1533. That of Bologna was also founded by the liberality of Pope Pius the VI; then followed that of Florence, erected by the Grand Duke; since which period they have steadily increased, and there is now one to be found in almost every city of Italy. The botanic garden of Leyden was established in 1577, forty-four years after that of Padua, which it surpassed in number and variety of plants—in 1663 the catalogue of this garden numbered 1,104 species. And in Boerhaave's time, who, when professor of botany there, neglected nothing to augment its riches, it contained 6,000 plants. Nearly all the beautiful flowers from the Cape of Good Hope, which now adorn our gardens, were first cultivated there. The first botanic garden in France, was established at Montpellier, in 1597; but the Garden of Plants at Paris was afterwards founded, in 1620, by Louis XIII—this noble institution has been greatly enlarged by successive monarchs and is now regarded as the most scientific garden and the best botanic school in Europe.

A taste for flowers is said to have been introduced into England, by the Flemish emigrants, who fled (as did those of St. Domingo to our state,) to that country, to escape the cruelties of the Duke of Alva, in 1567. The first botanic garden in England was afterwards founded at Oxford; and the royal gardens at Kew, were begun about the middle of the eighteenth century, by Frederic, Prince of Wales, father of George the Third, and now contain a rich and extensive collection of exotics, equalled, however, if not surpassed by those in the botanic garden at Liverpool; an institution founded by the influence and efforts of Mr. Roscoe, who established it in 1800.

In our country we know of no extensive establishment of this description. That commenced by Dr. David Hosack, of New York, has been suffered to go to decay by the government of the state, who purchased it from the learned and enterprising proprietor. Here, in Maryland, there is as yet no public garden of the kind—

but our society is we trust awakening public attention to the subject.

A taste is now springing up amongst us—and many private gardens, beautifully represented here to-night, attest the success of individual efforts. The field is before us—laborers are wanted—its limits are the confines of our republic. Look to the south, clothed at this time in a garb of rural splendor, to which its tropical flowers and brilliant evergreens, give a surpassing lustre. There alone flourishes the live oak, that tree, which upon the ocean is the bulwark of our land and the boast of our prowess. How irresistible and magical is the march of improvement, and the triumph of culture and art! Let the rover or naturalist seek some cool sequestered spot by the sources of the Missouri or the Mississippi, and pleased with the bright and lively rill which dances from rock to rock, to the murmuring cadence of its own music, watch and follow it as it steals under the osier and the vine, with gentle wing, till he finds it the majestic river upon whose bank Wealth builds his palace, Science his temple, and Religion her sacred fane; could his wonder be greater or his joy more intense than ours, at the triumphs of art and refinement over the rudeness of uncultured nature? Methinks the progenitors of many who hear me, once sought the fresh breeze of the evening, and plucked the scented wild flower on *this very spot*, now covered and adorned by edifices of taste and splendor, and crowded with monuments of civilization. So rapid and imperceptible, therefore, are the improvements of the great age, that if we would preserve around us at all the pristine charms of hill and dale, of wild flowers and native forests, it must be by horticulture, and in our gardens,—for the hammer and the noise of the busy multitude, and the axe of the emigrant, and the sweep of commerce, and the sister arts, are onward, with the velocity of our rail roads, clearing the way and settling the waste places, for more enduring power and extended wealth than the woods and wilds of our native soil can afford.

Our national resources, too, physical and political, and the giant strides of our people, already proclaim, even beyond the Mississippi, the sway of civil institutions and the glories of freedom. Hurried before their resistless march, the red man, and his once countless tribes, is flying from his hunting grounds and council fires—and his lion heart and eagle eye has cowered before the victorious arm of the white man.

Scarce two hundred years have rolled away, since the rock of Plymouth and the heights of Jamestown were pressed by pilgrims' feet, and consecrated to human rights. Now, twenty-six commonwealths, bounded by the Atlantic and the Gulf of Mexico, are before us, united by a common bond, and flourishing under the same bright banner, and crowded with upwards of fifteen millions of freemen. What a spectacle for the world to admire! what a cause of self-gratulation to us?

The 'May Flower,' laden with the seeds of liberty, touched *then* with drooping sails a savage and inhospitable shore—*now*, from the same strand, the moving palaces of steam and the countless ships of commerce, depart and arrive between cities of astonishing wealth and population. I repeat it, that now is the time for our most active exertions in the noble cause of Agriculture, and its patron, Horticulture, if we desire to

keep pace with the wide-spreading manufactures and commerce of our union.

To the farmer and agriculturist is offered a climate and soil more fertile, varied and healthy, than any under the sun—combining the heat of the tropics with the temperatures of the north and west, and inviting him to cultivate every variety of produce: while the growth of distinct and inexhaustible staples, presents what is no where to be found under the same government, agricultural resources of priceless value, which can in no event compete with and oppose each other in the same foreign or domestic market.

The south, opulent in the mimic snow of the cotton and the golden harvests of the rice fields, binds the planter to his soil by the strong tie of *interest*, and makes his staple the very life's blood of exchange and commerce; while the northern, western and middle states, by their grain and the culture of tobacco, form a vast store-house and granary for domestic and exporting uses, unlike the granaries of Rome, inexhaustable, and not filled from plundered provinces.

I might dilate upon these animating motives to exertion, which our favored position and resources so strongly urge—but I forbear—pausing only to add, that if the cause of agriculture and the claims of this society have no recommendation from considerations like these, there is yet *one precious and irresistible motive* to be found in the opinions and practice of him, the mention of whose name raises a throb of gratitude in every heart that loves liberty. Among the letters preserved and published of the immortal Washington, is one addressed by him in 1782, to Mr. Young, an English horticulturist, in which the father of his country uses the following language:

'Agriculture in the field and garden has ever been among the most favorite of my amusements, though I never have possessed much skill in the art, and nine years total inattention to it, has added nothing to a knowledge which is best understood from practice.' He then desires his correspondent to send him the following horticultural items:

'A little of the best kind of cabbage seed for the field culture—twenty pounds of the best turnip seed—ten bushels of sanfoin seed—eight bushels of winter vetches—two bushels of rye grass seed, and fifty pounds of best clover seed.' What a touching illustration of the simple habits and practical sense of this illustrious man. At the time this letter was penned, he had just returned victorious from the revolutionary struggle to the shades of Mount Vernon;—we there find him turning from the voice of praise and the blaze of military glory, to his *farm and garden*, with the same fondness with which the infant seeks the maternal bosom—and in the unostentatious amusements and healthful exercises of his fields, becoming the first American farmer, as he had proved himself the greatest hero and general on the tented plain.

What a lesson and rebuke should this incident convey to the noisy pride and bustling littleness of some of the miscalled great men of our day. To the *place-man* and demagogue, even the garden of Mount Vernon, blooming under the eye and hand of Washington, could afford no charm or solace for the loss of power or emolument—*these* serve their country but to *serve themselves*. Marius, in his defeated hour, sighed amid the

ruins of Carthage, and the imperial exile wept upon a barren rock. Washington, whether at the head of armies or guiding the destinies of his country, was the same exalted character; simple in his tastes, manly and noble in all the relations of life. In him education found a patron, religion and virtue a model and support, and agriculture its most distinguished benefactor. So happily combined were his sentiments, taste and principles, that in private as in public life, his example will descend to unnumbered generations, as the brightest ever bequeathed by man to man.

Imagination might carry those of us who have visited the hero's tomb, to that sequestered and beautiful garden, with its nursery of rare exotics and tropical fruits, the classic arrangement of its box-wood and hawthorn hedge, and the simple but chaste display of every flower and plant which wealth or fancy could procure. There, upon *this* seat, sat Washington, when the storm of battle was over, and refreshed his spirit and elevated his thoughts by the culture and contemplation of his garden—beside him was her, the chosen and beloved consort and companion of his life—like him in the noble but gentler attributes of her mind, fitted to be the sharer of his glory and repose. Around them bloomed the gifts of every clime, from the rose and fragrant coffee shrub of Java, to the night-budding *Cereus* of Mexico.

The seat still remains, but the patriot sleeps at the foot of that garden by the side of his fond associate and exalted partner—wild flowers and the evergreen are blooming over them, in token of the renewal and immortality of the glorious dead. And when summer comes, there the birds sing sweetly, and like angels' voices, do they tell of happiness, harmony and peace.

The sculptured column and proud mausoleum might (and should) adorn that spot—but in the scene, as Nature's hand has left it—in the murmurs of the breeze, the majestic flow of the Potomac, and the solemn stillness of the grove, broken only by the wild bird's note—above all, in the yet unfaded and unaltered walks of that garden of Washington, there is a memorial, which the 'storied urn or animated bust could never give.' It is the *pathos* and *truth* of nature. This theme is carrying me beyond my purpose—you will pardon the digression—I must pause.

Before us this evening is spread out a rich banquet—the strawberry and cherry,—the more substantial offerings for the kitchen are here, also, presenting a rotundity and condition which an alderman might envy; among them there doubtless is that talisman of fortune, the golden fleece of the vegetable world—I allude to the *moris multicaulis*, for the culture of which, it is feared, all things else may be abandoned. So warm is the fever which its prosperous fortunes have excited, that it is said, "a loving swain in one of the fertile counties on the Eastern Shore, was breathing to his lady-love the most impassioned vows, and had put the solemn and interesting question, upon a favorable answer to which his happiness depended, when she, with much enthusiasm, replied by asking him another question, 'Do you grow the *moris multicaulis*?' 'Oh! no,' he exclaimed, 'only beautiful flowers and roses for you.' Alas! simple youth, this answer was fatal to his hopes, and the *moris multicaulis* prevailed over love. Horticulture, in addition to this, is colonizing trees and

shrubs, for the purposes of shade and ornament for the bowers of love. Should it not then command the affections and aid of the fair?

There are finally to be drawn from the reflections of this anniversary, many lessons and benefits, calculated to warm the heart with gratitude to Him, who is the giver of all things; and above all, there are opened, by the study of this volume of nature, sources of unfailing joy and contentment. So ordered is the economy and wisdom of Heaven, that this lovely season of the year, the precursor of Ceres, and the prophet of abundant harvest, by its *regular return*, teaches 'desultory man, studious as he is of change,' that there is an invariable and immutable law, stamped upon every plant that grows, and every bud that opens, alike incapable of change and deterioration, and instructs the child of adversity, who has been left alone, seathed like the pine upon the mountain's top, by the lightning and the tempest—that there is a recuperative principle in the mind, shadowed forth most beautifully by the reviving tree and the budding flower, which the breath of Heaven shall awaken to *life, beauty and immortality*,—emblems of the christian's hope, which burn brighter as the clouds gather, and his spirit is departing, and his heart becoming cold.

By assiduous efforts and gentle care do we not, when this lovely season is gone, behold how culture and the artificial warmth of the conservatory and the greenhouse keep a perennial spring about us amid the snows of winter, and the window and boudoir of woman become the home of the dahlia and the rose, living and giving out their incense to her tender mercies, when all around is death; or, blooming in unwonted splendor among her soft tresses, telling of the kind, gay girl, the fond and loving mother, whose hand has watered them, and beneath whose smile their buds have expanded into life.

The sentiment and morality of flowers are among the most attractive of their charms. Who does not feel full often the pure power of the teachings which these little moralists declare? The rose is a legend of romance, and its history, whether in the bower of love, or embroidered on the banners of civil war, is a history of the heart. The rose of Sharon, and the lilies of Damascus, were sung by the waters of Israel, while poetry and religion have associated and embalmed it with all the most sacred of their rights.

In the festive hall, where the dance, and song, and music prevail, it is the companion and emblem of the young and joyous. The bridal wreath and the nuptial altar find its purity and fragrance, though but 'the perfume and suppliance of an hour,' a sentiment congenial with the brightness and brevity of the passing scene.

And, oh, with what unsearchable and deep love does the youthful mother place it in the garland of her first born; and should the nursing be too early snatched from her bosom, with what fond but melancholy pleasure will she oft times turn with moistened eye from the memory of the cherished one, to the rose bud or the flower, as the remembrancer of its loveliness and beauty. Think you there is then no truth in all this? To the pensive and uncorrupted mind can there be a pleasure more refined than the culture of these sweet earth-born innocents, amid the shades and serenity of the garden and the groves?

The Prince de Ligné, who was the companion of monarchs, and surrounded by the splendor of courts, derived his chief enjoyment from the cultivation of his garden, and with enthusiasm has said, 'would that I could warm the whole world with my taste for gardening; it appears to me impossible that a *bad man* can possess it; there is no virtue that I do not imagine in him who loves to speak of, and to make gardens; fathers of families, inspire your children with a love of gardening and flowers.' This is the language of a prince, and the testimony of a generous and exalted spirit.

There is, besides, in the culture of the garden, a religion silently but truly taught, to which meditation gives the most consoling tone; the conflict of exclusive and intolerant opinions are there unfelt and unheard; but we hold converse with Nature, and from her flowery lap raise our eyes and hearts in adoration to Him, who,

'Not content with every food of life
To nourish man: by kind illusions
Of the wondering sense, hath made all nature
Beauty to his eye and music to his ear.'

How cooling to the chafed brow and the careworn spirit is the copse-wood shade and the rural walk! What memories of happy days and well-beloved companions crowd upon the garden's contemplative hour, bringing back to age its golden morn, its blithesome boyhood. If a father or a mother hath departed from us, the haunts they loved, the flowers they nursed, the paths they trod, summon us back to all we owe them; and all we have lost in them,

'Soft as the memory of buried love,
Pure as the prayer that childhood wafts above,'

come back to us from these interviews with nature, our best days and our most cherished affections.

The stars have been called the poetry of Heaven; but may we not with equal truth turn to these flowers as the poetry of earth, speaking as they do to us of peace and good will among men?

Rank, power, and wealth, the arm of the warrior, and the tongue of the sage, have seldom blessed their possessors; and we are called too often to deplore in this and other lands, the evils which have resulted from the 'fears of the brave and the follies of the wise.'

How touchingly beautiful and sublime are the pictures of those primitive days, when, under their own vines and fig trees, the babbling brook at their feet, and the bleating and spotless flock around them, the shepherds of Israel poured forth their morning song of praise to Him who made the meadows to nourish and the trees to shade them. With what fervor did they exclaim, 'The Lord is our shepherd; we shall not want; he maketh us to lie down in green pastures and leadeth us beside the still waters.' The altars of christianity never burned with a purer incense than this: and are we not then invoked now to realize from the pursuits of this society the primitive charms and excellence which they impart?

Peace and abundance cover our land—in others, less happy and exalted, some flower or shrub is the household and tutelary emblem and watchword of national honor. The lily of France and the rose of Burgundy, have encountered the thistle and the shamrock on the bloody field, or, interwoven in peace, become the olive branch and pledge of union and friendship—with us as

yet, not one of the many beautiful productions of our soil is the badge of American freedom. And why should it not be, like the song which animates in the fight? Let us also point to some ever present and blooming token of our land, which will meet us in the field, cheer us in absence, and delight us every where, and which to the dying patriot's eye shall revive the recollection of his home and country—

'Sternitur infelix alieno vulnere; cœlumque
Aspicit, et dulces moriens reminiscitur Argos.'

To fix then upon this emblem, is a task I commend to our fair countrywomen, who should indeed present it, as a gift from the beautiful to the brave, with which to return victorious, or return no more.

These are the refined charms of horticulture, and thus is your society recommended. At this celebration it invites men of all conditions in life to come forward here, in Maryland, and devote not their gold and silver, but their leisure and taste to the most interesting cause and the most delightful recreation. The motives, the land we inhabit, the resources of our people, and the innate value and purity of the pursuit itself, have been alluded to, and all call on us to lend our influence to its promotion. The tired and worn down citizen shall be refreshed by it; for to green fields and healthful exercises we introduce him while living; and there is a spot preparing for him, when dead, almost within sight of this hall—a place of repose, a city of silence, which, by the enterprise of many connected with this society, shall ere long realize the prophet's vision that made paradise the home of the dead.

Beneath the fragrant birch and the refreshing evergreen shall there repose the departed, with birds to sing over their graves, and the sweetest wild flowers to bloom in earnest of the spirit's destiny. Horticulture is doing this. Then, by all its pleasures, by its usefulness and innocency, we do again invoke you to become its patrons and friends.

The studies of the closet and the feverish pursuits of life, wear down the body and corrode the spirit; but here is a pursuit full of beauty and freshness—peaceful and lovely are its ways—pure and uncontaminated is the cup of its joys; its study and culture will assuage anger, moderate ambition and sanctify love, and raising the heart from objects of temporary interest, place it on those of eternal hope, keep with us and about us the bloom and fragrance of life's weary journey, and make us wiser and better in our day and generation.

RETROSPECTION.

Selected.

I love—when all the world is still,
At midnight's solemn, silent hour,
When retrospection's magic thrill
Steals o'er the soul with matchless power—
I love to linger o'er the days
Of halcyon childhood, swiftly gone!
When to my heart this "thorny maze"
Seemed but a world of joy alone.

PAULINE BLENLIS;

OR, THE DISAPPOINTED BRIDEGROOM.

Pauline Blenlis—the young and high spirited heroine of my little tale—was a beauty of twenty summers, a brunette with a glowing cheek and a sparkling eye; rich, pouting lips that revealed, when parted, pearly teeth of a marvellous whiteness, and a smile that would make your heart leap, bright, joyous and beautiful as herself—but Pauline's smile was not always radiant, nor was her heart always joyous; for one enemy to her peace, in the shape of an antiquated little lover, made his appearance regularly every afternoon at six o'clock. Monsieur Hericourt, comte de V—, was old, ugly and extremely disagreeable—with a mouth which seemed made for the express purpose of dispatching madame Blenlis' delicious fruit, which hung in tempting clusters above the summer-house, in which he was sure to meet a cordial welcome from madame, and a very reluctant one from mademoiselle. Monsieur was evidently a gentleman of the old school, as might have been observed from the very profound manner in which he replied to madame Blenlis' salutations, and the delicate deference which marked his attention to her daughter. He generally wore a velvet coat of no small dimensions—long, white hose, which displayed his sinewy limbs to advantage, and shoes of the most approved fashion of the time of the sixteenth Louis—large silver buckles ornamented his knees, which slightly inclined outward; and a little cocked hat, doubtless a relic of the last century, covered his well powdered wig, and both together most effectually concealed his shrivelled face.

The age and ludicrous figure of the old count, was sufficient to have created aversion and disgust in the mind of a young, admired, and romantic girl, like Pauline—but there were more powerful arguments against him than those enumerated.

There was, at this time, sojourning in the little village of N., a young American of very prepossessing appearance, who, having made the tour of Europe, was waiting quietly at N., previous to taking his departure for his native land. But opportunities had occurred repeatedly—vessels bearing the star spangled banner had arrived and departed from the neighboring port—still the young republican lingered—charmed with the bright and beautiful scenery around, and the brighter and more beautiful eyes of Pauline Blenlis. Hervey Leslie, was no ordinary youth, with a taste attuned only to the gay frivolities of the metropolis, which he had quitted after a short visit, for the fresh air and simpler manners of the village of N. Light-hearted, bold and reckless of danger, he sought enjoyment in following the chase, wandering among the wild and unfrequented passes of the mountains, or plunging fearlessly in the rushing waters of the noble river that flowed past the little town. But now, there was for him a sweeter, rarer pleasure in holding sweet converse with the bright creature that passed before him like a wood-nymph, in guiding her little skiff over the blue, glad waters, or curbing his mettled charger, to keep pace with the gentle animal she rode. Her voice came over him like a spell, and he started with new and undefinable emotions when her joyous laugh, clear and musical in its merriment, thrilled on his delighted ear.

He, too, was a daily visitor at madame Blenlis' little cottage; but as he never called at the house, which was set apart for the reception of the count, she little dreamt of the progress he was making in her daughter's heart; therefore she had never thought of his being in the way of her darling project, the union of the old noble with the young and delicate Pauline. To be sure, Pauline always declared that she hated the count, that she would not marry him for the world, and invariably preferred the company of the younger beaux of the place; but madame Blenlis was sure she would, some day, prefer the titled and wealthy Hericourt de V—, to all the handsome and penniless lovers who were at her feet. And so the wedding day was named, and grand preparation made for the young bride.

Evening shades were stealing over the gay town of N. By degrees the din of busy life gave way to the hum of cheerful voices, and the careless laugh of the pleasure-loving Frenchman, as he sought a respite from his daily toil; one dim, uncertain light, showed itself from a cottage window; another, and another, bright and cheerful, sprang up, and the whole place soon wore an air of gaiety and happiness, that but little accorded with the feelings of Pauline Blenlis, who wept in bitterness of spirit in the retirement of her chamber. But Lucile, a pretty little soubrette, spent no time in vain lamentations—for two long hours had she waited, with a patience and fortitude worthy of a martyr, at the door of madame Blenlis' boudoir. That a conference was held within, which related to mademoiselle Pauline, she did not doubt, for she had herself shown monsieur le comte into the presence of her lady. Now monsieur le comte was no favorite with Lucile, and she watched his motions with the earnestness peculiar to her sex and country. If the count de V— paid madame Blenlis a morning visit, and Pauline was not sent for, she knew it; and if his cross-eyed little valet presumed to bring a note from him, Lucile always peeped into the open ends, before she delivered it to her mistress, and then flew to acquaint mademoiselle with its contents.

For a long time had the soubrette maintained the attitude of an anxious listener—her body inclined forward, until one knee and one hand rested on the floor; her ear applied to the key-hole, and her face expressive of the most eager curiosity. Suddenly she started to her feet, and retreating into the recess of a window, was concealed from sight,—a step was heard within the room, the door was opened, and the count de V—, in his cocked hat and shining knee buckles, passed through the saloon; soon his carriage rattled from the door, and the next moment Lucile emerged from her hiding place, and gliding through an opposite door passed swiftly down the street. It was quite dark when she entered mademoiselle Blenlis' room with candles. Pauline was sitting with her back to the door, and observed not her entrance,—the maid deposited the lights on the dressing-table, and passing noiselessly around the room, until she came in front of her young lady, stood perfectly still, (a wonderful thing for Lucile,) and contemplated the beautiful picture before her in silence.

Pauline was sitting in a large arm-chair, with her finely-formed head thrown back against it, revealing a full, swelling throat, that vied with the purest marble—one hand, delicate and symmetrical in its form,

lay over the arm of the chair, while its beautiful fellow lay in her lap clasping an ornament of brilliants, that seemed to have been taken from a box which stood near her. It was the bridal present of the count de V—. Lucile observed that her eyes were closed and her cheek extremely pale. The chain of brilliants, disengaged by their own weight, fell, from the slight fingers that held them so carelessly, to the floor. The *soubrette* sprang forward and caught them. "Mon Dieu! mademoiselle, she exclaimed, "you have broken your beautiful necklace; such superb jewels too; but you do not care for these things. You would rather have one pearl, one little pearl from monsieur Leslie, than all of old cocked-hat's jewelry, himself into the bargain."

The delicate lids of the languid beauty suddenly unclosed, and a pair of dark lustrous orbs flashed indignantly on the speaker.

"Silence, Lucile! you are impertinent. What is Hervey Leslie to me?"

"I do not know, mademoiselle," replied the girl meekly, "what he is to you; but you are a great deal to him—for Antoine, his valet, says that your name is on his lips every night, and he has pined away ever since it was rumored that you were going to marry the Count de V—."

"Peace, pratter," returned the blushing Pauline; then starting from her seat, she paced the floor distractedly. Her arms were now clasped tightly over her breast—now flung wildly from her—the rich blood rushed tumultuously to her face, and as quickly receded, leaving the paleness of despair upon her cheek and brow. Suddenly she stopped.

"I will not marry this old dotard. Now hear me swear it, Lucile—I will not marry him. If they drag me to the altar, I will not pronounce the vows!"—and clasping her face with both hands, she sank into a chair.

"Mademoiselle," said the girl tenderly, "here is a billet for you from monsieur Leslie."

Pauline snatched the note from the attendant, and glanced her eyes eagerly over its contents; then followed a sudden transition from a blushing crimson, to a deathly paleness; and then the beautiful rich color came rushing again over neck and brow—and then a smile—one of her own radiant and peculiar smiles, lit up her exquisite features, and Pauline Blenlis was herself again.

That night a long and absorbing conversation was held in a subdued tone, between mademoiselle Blenlis and her humble attendant—and once or twice Lucile was seen passing to and from Pauline's apartment, during the week that followed, with billets in her hand—and Francois, one of madame Blenlis' own servants, was heard to declare, that he saw monsieur Leslie's valet pass him one evening about night-fall, with a couple of travelling trunks in a wheelbarrow—that he went in the direction of his master's residence, and had doubtless come from the cottage. But Francois did not tell this until after an important change took place, which you will learn, gentle reader, in the sequel.

The bridal morning of Pauline Blenlis broke brightly and beautifully, and the sun shone as gloriously as if his presence were to light up the altar of youth and loveliness, instead of witnessing the sacrifice of a delicate and shrinking victim to the demon of riches.

Every one in the village loved Pauline; and more than one shrewdly suspected that mademoiselle would rather give her hand to the handsome American, than sell it to monsieur le compte and his cocked hat—but all knew that she entered into the engagement reluctantly, therefore they prudently forebore any remarks on the occasion.

The chapel was fancifully decorated with flowers; the bells rang a merry peal, and the villagers, in their holiday attire, were gathering around the doors. At length the bridal cavalcade appeared. The count's chariot rattled up to the open portal, and he dismounted as quickly as his rheumatic affections would permit, and turned to assist his bride who followed in a carriage with her mother. Pauline could scarcely repress an expression of loathing as she gave him her hand, while the other was clasped by the elegant and graceful American, who walked by her, in ridiculous contrast to the ancient knight on the other side, until they reached the church door, when dropping it, he fell into the rear, and followed the party slowly up the aisle of the building. And now they were all to witness the celebration of nuptials, which all regarded with horror and some with contempt, as they thought of the youth and beauty on one side, and the age and infirmity on the other.

Pale and trembling, from excessive emotion, the bride leant on the arm of the palsied-stricken count, like a lily-bud reposing its delicate cheek against the gnarled trunk of a decaying tree. The priest, in deep and solemn tones, began the marriage service, when suddenly, a convulsive shudder shook the frame of the lady, and she fell fainting into the arms of the person who stood next her—who happened to be, (accidentally, perhaps,) Hervey Leslie. Then there was confusion and astonishment, and the buzz of many tongues; and amidst all this Leslie made his way through the crowd, and bore the senseless form of the bride to the carriage. Lucile remained behind, considerably urging madame Blenlis to return in the count's carriage, as they were both too much agitated to render any assistance; she would herself run forward, she said, and assist the gentleman who was trying to recover her young lady. Then passing rapidly through the crowd, which made way for her, she sprang into the carriage with Hervey and Pauline. The footman quickly put up the steps; the coachman applied his whip, and before the infirmities of the count would allow him to mount into his vehicle, they had turned the corner and were out of sight. Never travelled horses so fast before. Pauline had recovered from her apparent fainting fit, and in a few hours from their hasty departure from the church, they were on board a gallant merchantman, with her sails spread, and rapidly leaving the blue shores of "la belle France" in the distance.

When monsieur le compte discovered that his lady-love had decamped, he was inconsolable for his loss, and at the end of the week offered himself to the mother of his former attachment, and was accepted.

Six months had flown by on gossamer wings, when one cold autumnal evening a chaise and pair drew up before the city hotel, followed by a coach and four noble prancing grays; from the former establishment, alighted a female, with a lap-dog, a ban-box, and sundry small articles in her arms; and a gentleman of

starched and powdered dignity. In the latter, came monsieur and madame *compte et compresse de V—*. In a few hours after their arrival, madame de V— had the pleasure of clasping her daughter in her arms; and the count, reverently laying aside the identical cocked hat, in which we introduced him to you, reader, declared that monsieur Leslie had stolen the bud from him, but he had received in recompense, the beauty of the full blown rose.

Pardon me, gentle reader, I had nearly forgotten one part of my story. Lucile stood by to offer her congratulations, accompanied by her spouse. She had become mistress Antoine Ruet.

J. H. M.

THE SUBTILTY OF LOVE.

A very old song modernized.

You cannot bar Love out,
 Father, mother, and you all!
 For, mark me! he's a crafty boy
 And his limbs are very small;
 He's lighter than the thistle's down,
 He's fleetier than the dove,
 His voice is like the nightingale's;
 And oh! beware of Love!

For Love can masquerade
 When the wisest do not see;
 He has gone to many a blessed saint
 Like a virgin devotee;
 He has stolen through the convent grate,
 A painted butterfly,
 And I've seen in many a mantle's fold
 His twinkling roguish eye.

He'll come—do what you will;
 The Pope can't keep him out;
 And of late he's learned such evil ways,
 You must hold his oath in doubt:
 From the lawyers he has learned,
 Like Judas, to betray;
 From the monks, to live like martyr'd saints,
 Yet cast their souls away.

He has been at court so long
 That he wears the courtier's smile;
 For every maid he has a lure,
 For every man a wile.
 Philosophers and alchemists,
 Your idle toil give o'er;
 Young Love is wiser than you all,
 And teaches ten times more.

Strong bars and bolts are vain
 To keep the urchin in,
 For while the goaler turned the key
 He'd trap him in his gin.
 You need not hope by mail of proof
 To shun his cruel dart;
 For he'd change himself to a shirt of mail
 And lie next to your heart.

More scatheful than an evil eye,
 Than ghost or gramercy,
 Not seventy times seven holy priests
 Could lay him in the sea.
 Then, father, mother, cease to chide—
 I'll do the best I may,
 And when I see young Love coming
 I'll up and run away!

PETER.

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE VI.

Constructiveness.—This organ is situated at that part of the frontal bone which lies behind and above the superior and outer angle of the eye, immediately above the spheno-temporal suture, and before Acquisitiveness. In the brain it occupies the posterior part of the anterior lobe. Dr. Gall discovered this organ by noticing that in this region men distinguished for mechanical genius are very wide. Some time after becoming satisfied of the function of this organ, some gentlemen of Vienna presented to him a person concerning whose talents they solicited his opinion. He told them that he ought to have a great tendency toward mechanics. They then told Gall that he had been examining the famous painter, Unterbergen, and expressed dissatisfaction at the decision; but the painter acknowledged that Gall was quite correct—that he had always had a passion for mechanics, and painted only for a livelihood. He also took the party to his house, where he showed them many machines and instruments, some of which he had invented and others improved. Besides, Constructiveness is an element in the art of painting.

Dr. Barclay used to exhibit to his pupils the skulls of the lion and other carnivorous animals, and ridiculed the Phrenologists for explaining the narrowness of this region in those animals by their deficiency in Constructiveness. "The lion, gentlemen," he would say, "has very strong temporal muscles, for the purpose of empowering its jaws to masticate flesh and bones: now it is evident that the play of these muscles compresses the head in this region, and causes this remarkable narrowness." This seems plausible, but the Professor did not carry his observations far enough. Had he extended his inquiries, he would have found that the form of head alluded to occurs in the skulls of carnivorous animals, and cannot, therefore, be the effect of the action of their jaws on hard substances. Further, the beaver eats through pretty strong logs of timber with its teeth, and its temporal muscles are strong, yet the head is broad in this region, and the animal is highly constructive. Again, in the human race some have narrow heads and weak constructive talents, though they live on slops; and others broad heads and great mechanical skill, though they live on hard viands. This is the skull of a beaver; you may see the development of this region very distinctly, and on putting my finger within, I find a distinct hollow corresponding with the external protuberance.

I must here repeat the caution I gave when treating of the organ of Acquisitiveness. The temporal muscle differs in different persons. It is therefore necessary to estimate its thickness in the living head, by feeling at the muscle while the individual moves the lower jaw.

To construct, means to put detached materials together so as to make a single object. Thus, we construct a house or a ship. This faculty, however, goes farther than this; it seems to be a tendency to fashion in general, and this may be done by putting materials together, or by chipping off fragments, or by moulding, or by drawing lines and laying on colors. This faculty does not invent: that is the act of the understanding; it merely fashions or configures. Though when large it stimulates the understanding to invent what will employ it agreeably in constructing.

Constructiveness takes its direction from the other faculties. Combined with large Weight, it leads to machine-making; with Ideality and Form, to statuary; with these and Color, to painting. Compare these heads; in this, of Franklin, it is small; in this, of Canova, very large. The development is greater in the European than in the Malay or Negro, and he is well known to have more constructive talent than either. It is very small, as you see, in the New-Hollander, and of all mankind they are the least constructive. When visited by Capt. Cook, they were naked; built no houses, and had no implements of agriculture, fishing or hunting. They were destitute, in short, of every art which can add comfort or decency to life, depending for subsistence on spontaneous vegetation, and the fishes which are left by the tide among the rocks. Compare this skull with that of an Italian; how enormous the difference in favor of the latter! This Italian skull, known to be at least two hundred years old, was supposed to be that of Raphael, and was preserved as such in St. Luke's academy at Rome; but as Raphael's skull has been recently discovered, objectors say that this mistake refutes Phrenology. All that they can make of the case, however, is, that it did not belong to Raphael, but to somebody else remarkable for Constructiveness, Ideality, Form, Comparison and Causality; and that Raphael's skull, remarkable also for these, is in conformity with his well known character. Compare this, the head of Napoleon, in whom Constructiveness was small, with this, the head of Brunel, the celebrated engineer of the Thames Tunnel, and the inventor of machinery for making blocks for the rigging of ships by means of steam. Here the organ is very large, and this is in other respects a very superior head. The organ is very large, too, in Haydon, the great historical painter of England. Contrast the development in his head to the east of Hogg, the Eurick Shepherd. Contrast it again in Wilkie and Wm. Pitt. Here is the head of Sir Wm. Herschell, in whom it is very large, and the construction of a superior telescope was the principal foundation of his fame.

This organ is of great service to operative surgeons, to engravers, to cabinet makers, to tailors and dress-makers. We find some men who for want of it cannot mend a pen nor sharpen a razor. This was the case with a friend of mine in Edinburgh. You perceive it small in the Rev. Mr. Martin, who was bred a watch-maker, but finding no interest in the employment, he gave it up and turned preacher. Lucian and Socrates renounced sculpture. On the other hand, we often find men whom circumstances have prevented from following their natural inclination, and whose occupations do not lead them to its exercise, occupying themselves with mechanics as a pastime and amusement. An eminent Scotch barrister told me that in the very act of composing a pleading on the most abstruse question of law, vivid conceptions of mechanical improvements would dart into his mind, and that he often had to leave his employment to embody them in a diagram in order to get rid of the intruders. Leopold I, Peter the Great, and Louis XVI constructed locks. The late Lord President Blair had this organ large, and he had a private workshop in which he constructed pieces of mechanism.

This organ is very differently developed in different nations. I before showed you the skull of a New-Hollander. This is the skull of an ancient Greek, in which it is very large; and this is the case with almost all I have seen. The organ is larger in the Italians and the French than in the Scotch and English, and they manifest greater constructive ingenuity.

Constructiveness is sometimes large when Intellect is deficient. Thus, some of the cretins of Switzerland are employed in making watches. Dr. Rush mentions two cases in which a talent for design had unfolded itself during a fit of insanity. And he adds, that there is no insane hospital in which examples are not found of constructive talent suddenly developing itself during their insane condition.

The natural language of Constructiveness is to turn the head sidewise, in the direction of the organ. Dr. Spurzheim remarked that women in whom it is large, when entering a milliner's shop turn their heads on one side toward the article they are examining. I have observed that children with it large, in learning to write, move their heads with their pens, and delight in flourishes; while those with it small will hold their heads still and upright, and write stiff, plain hands. This is a hint to writing-masters to let the heads of their pupils alone, for their instinctive movement or position will best aid the mind and the hand.

Sentiments.—We now come to that genus of the faculties called Sentiments. Some of these are common to man and the

lower animals; others are peculiar to man. The former are styled the Inferior Sentiments; of them I shall treat first. I shall begin with

Self-Esteem.—This organ lies at the crown of the head just above the sagittal angle of the parietal bones. When large, the head runs upward and backward from the ear in this direction. It can be readily found by noticing that it lies on the middle line, and in the superior part of the back of the head, and never occupies any portion of the head which looks directly upward.

But for this organ, man, placed as he is in a universe of worlds, surrounded by objects vast and magnificent, would be apt to have an overwhelming idea of his own insignificance, and exclaim, despondingly, 'What is man, O Lord, that thou art mindful of him?' This organ was necessary to give him due importance in his own eyes, to impart that degree of satisfaction with self which leaves the mind open to the enjoyment of the bounties of Providence and the amenities of life; it inspires us with that confidence in our own powers which is essential to every great achievement, and even to the proper application of our faculties in the every-day business of life. Some have expressed their surprise that there should be an organ for esteeming one's self, seeing that humility is a virtue; but they forget that humility is the opposite of arrogance, not of proper self-esteem.

Gall discovered this organ by noticing the head of a beggar of extraordinary manners. This beggar was the son of a rich merchant from whom he had inherited a considerable fortune, but was so proud that he thought it beneath him to apply to business, either for the preservation of his paternal fortune or the acquisition of a new one. Gall moulded his head, and on examining it with attention found the organ of Cautiousness small, with a small head in general, but this part much developed. He pursued his inquiries and finally established the organ.

The organ is very large in this cast, which was given to me at Boston. The head, you perceive, is very long upward and backward from the ear. I was told that the gentleman whose head it represents manifests the feeling to a most ridiculous extent. Love of Approbation lies on the sides of Self-Esteem. When large it gives remarkable fullness and breadth to the upper and back part of the head. I will present some heads to you in which these two organs are in various states of development. This is the Boston head, in which Self-Esteem is large and Love of Approbation small. This is the head of Mrs. Aldin, in which Self-Esteem is small and Love of Approbation large. This is the head of the Rev. Mr. Martin, in which both organs are large. Here are three others: this is the head of an Irish soldier who shot three men; in it Self-Esteem is very large and Love of Approbation very small. This is the head of Francois Gordonnier, the French poet, in which Self-Esteem is small and Love of Approbation very large. This is the head of Sheridan, in which both organs are large. This is the head of Pope Alexander VI, in which Self-Esteem is very large: contrast it with the development in this, the head of Melancthon, in which it is small; here you perceive, too, splendid moral and intellectual regions.

The proper development of Self-Esteem is an essential element in a great character; but when too large it produces arrogance, superciliousness and selfishness, and in children petulances and wilfulness of temper. The man of inordinate Self-Esteem sees every thing through the medium of self. He is a world unto himself, to which all things must concentrate. He is a standard to which the manners, morals and opinions of others ought, he thinks, to conform. This feeling in predominance leads to a great extent the fountain of that intolerant zeal so frequently manifested by professing Christians on behalf of their sectarian views. "There is no grace," says Cowper, "that the spirit of self can counterfeit with more success than a religious zeal. A man thinks he is fighting for his own notions. He thinks he is skilfully searching the hearts of others, when he is only gratifying the malignity of his own, and charitably supposes his hearers destitute of all grace, that he may shine the more in his own eyes by comparison. When he has performed this notable task, he wonders that they are not converted: he has given it to them soundly, and if they do not tremble, and confess that God is in him of a truth, he gives them up as reprobate, incorrigible, and lost forever." This is a fine description of a minister who depresses his hearers that he may himself be exalted.

There is at this time a great war going on in my own country between two religious parties, one of which has certain endowments which the other thinks it ought not to have. A minister of the established church, making a speech at one of their meetings, maintained that the true religion should be endowed; "But," said he, "it is asked, which is the true religion? I answer, ours is the true religion." This assertion, which was merely an amusing manifestation of Self-Esteem, was received with loud applause.

The person in whom this organ is too small, lacks proper self-confidence. He is often unable to pursue even a virtuous course, through diffidence of his own judgment. Inferior talents, combined with a strong endowment of Self-Esteem, are often crowned with far higher success than more splendid abilities joined with this sentiment feebly developed. Dr. Adam Smith remarks that it is better to have too much than too little of this feeling; because, if we pretend to more than we are entitled to, the world will give us credit for at least what we possess; whereas, if we pretend to less, we shall be taken at our word, and mankind will rarely have the justice to raise us to our true merit.

Self-Esteem is an essential element in *conscientiousness*. Persons in whom it is large are often found discussing the characters of others, and degrading them. It is the fancied superiority of self which produces the enjoyment of detraction. They take their neighbors down a peg that themselves may appear a peg higher. Envy is the result of Self-Esteem and Destructiveness. The one is offended at the superior happiness, excellence, wealth or station of others, and Destructiveness hates them for it. It is this organ which renders true the saying, 'that we always find something to console us for the misfortunes of our neighbors.' This organ is extremely active in society. In my own country the learned professions look down upon and despise the merchants as a plodding set, and the merchants look down upon the doctors and despise them for their poverty. The wholesale dealers look down upon the retail dealers, and these look down upon the handicrafts—and the men of title look down upon and despise all. These are strange fantastic tricks, from the spirit of which this country is by no means free.

Predominant Self-Esteem is a foe to advancement, rendering men quite satisfied with themselves, and with whatever belongs to them. An eminent phrenologist called as a passenger from the Clyde to a foreign port. In the captain of the vessel Self-Esteem was very large, and Reflection and Conscientiousness deficient. He said that when he first saw this vessel he estimated her very lightly, but that after commanding her a while he thought her the best ship belonging to the Clyde. This was evidently because she had become his vessel. Madame de Staël describes the effect of inordinate Self-Esteem on even a powerful mind. 'He spent his time,' she remarks, 'in admiring the astonishing magnificence of his own abilities and attainments.' This organ and Benevolence large, give a solemn, good-natured, patronizing air. Men possessing this combination are apt to address others with the epithets, 'My good sir,' 'My good fellow,' and the like.

Self-Esteem is large in the North American Indians, who are remarkable for pride and personal dignity. It is large in the English and Americans, and is the foundation of that love of liberty which characterizes this arrogant and turbulent race. It is large in the Hindoos, who think themselves the wisest people in the world, but have no other quality that inspires love of liberty. It produces that egotism, that proneness to use the emphatic *I*—'*I* did this; *I* said that'—which characterizes the discourse of some people. During the wars of the French revolution, when the British nation were struggling for existence against all Europe, excluded from the continent, and mostly confined to their island, their patriotism was invoked in all modes, and their Self-Esteem continually stimulated. They thus learned to consider themselves the only civilized people in the world, and were greatly astonished on visiting the continent after the peace, to find any great, good and amiable quality as abundant elsewhere as at home.

Self-Esteem often restrains men from forming improper connections; it inspires with the dislike of every thing mean and contemptible in behavior. Combined with Acquisitiveness and small Benevolence, it produces a disposition to acquire and keep property, and make misers; with Acquisitiveness, Love of Approbation, Ideality and Form, it leads people to collect and exhibit statues; with these and Color, to collections of paintings; with Acquisitiveness, Love of Approbation, and Eventuality,

with a passion for unities. It has been said that but three farthings were coined during Queen Ann's reign. This combination would prompt its possessor to give one hundred pounds for one of these farthings, and one thousand if the other two were destroyed.

Self-Esteem is the foundation of that love of distinction and of titles which is so common in my own country, and from which this country is by no means free.

When diseased, the organ leads the patients to consider themselves great personages, as kings, queens, generals, great poets, or even as God himself. It is larger in men than women; and the former are more liable than the latter to insanity from pride. Its natural language is a strut in the gait, a lofty carriage of the head, and a repulsive manner and tone of voice. When much excited, it draws the head back. You see the natural language expressed in the most striking manner in this caricature of Louis XVIII. It was printed at the time that there was a contention between this king and the people about a charter. The French, very reasonably in my opinion, thought that France belonged to them, and that they had a right to form their own charter. Louis thought that France belonged to him, and he out of the plenitude of his condescension would bestow a charter upon them. They revenged themselves by drawing him in this attitude with about as much contempt in his face and manner as if he were giving to a dog a bone. I mentioned, that before the Rev. Edward Irving became distinguished, in fact while he was yet a student, I examined his head and found very large Self-Esteem and Wonder. This represents him in the pulpit: you see he is drawn back in the attitude of self-importance. It is easy to perceive that he is winding up a period in which he tells his hearers that he has done his duty, and that if they will go to perdition, their blood will be on their own head. Here is the full-length portrait of a lady: her erect and composed attitude indicates the presence of this organ. At the close of a battle between two cocks, you see the abasement and exaltation of this organ. The one slinks away with his head down, and the other stretches up his head and proudly struts while issuing a victorious crow. Self-abasement bows the head into a direction contrary to that of Self-Esteem, as in this beautiful representation of our Saviour, who is supposed to be saying: 'Thy will be done.'

Love of Approbation.—I have pointed out the direction of this organ, and presented to you a number of specimens. Dr. Gall met with a woman in a lunatic asylum who fancied herself the Queen of France. He expected to find the region of Self-Esteem largely developed, but instead there was a distinct hollow and a large round protuberance on each side. This at first caused him much embarrassment. But he soon perceived that this woman's insanity differed much from that of men alienated through pride. The latter affected a masculine majesty, and were grave, calm, imperious, elevated, arrogant. This woman, on the contrary, manifested a restless frivolity, an inexhaustible talkativeness, affected forwardness, eagerness to announce high birth and boundless riches, promises of favor and honor. She solicited attention, and strove by every means to obtain admiration. From that time he perceived the difference between Self-Esteem and Love of Approbation.

Love of Approbation is the drill-sergeant of society, and admonishes us when we depart too widely from the line of march of our fellows. It is the butt, too, on which wit strikes, and which enables ridicule to shame us out of faults and improprieties. When excessive, it craves for compliments, and is the enemy to Independence. It is led by fashion, and ever asks, before adopting a course of conduct, what will the world think of it? A person in whom it is excessive, gives openly, that he may receive praise. He feels rebuffs keenly, and a thousand things occasion excessive pain which pass over one in whom Self-Esteem is large without exciting attention. In the French, Love of Approbation is predominant, and they think the English cold, haughty and arrogant. In the English, Self-Esteem is predominant, and they think the French low-spirited, savoring and trifling.

Love of Approbation combined with Benevolence, produces politeness and desire to please; with Self-Esteem, love of fame; with Alimentiveness, it leads men to boast of feats in eating and drinking, producing the *four-bottle* men, whom Lord Chesterfield in *charity* calls *liars*, because, if he believed them, he should call them beasts. Combined with Ideality without large intellect, it produces love of dress and ornament, and ambition to lead the fashions; with Ideality and Constructiveness, love of

works of art. Combined with Language, it produces a fondness for composition, for love of fame as an author; with Acquisitiveness, it produces admiration of wealth; with Combativeness, and an otherwise low organization, it forms the *bully*, who loves to be considered the best fighter in his neighborhood. The organ is very large in the American Indians; and the love of decorations and ornaments, whether these consist of stars, garters and medals, or of tattooed faces, bored noses and eagles' feathers, springs from it. We find some men who are apt to captivate us very quickly by their attentive and respectful manner, but we often find in a while that all is not gold that glitters. We learn that all their attentions are bestowed for the purpose of obtaining approbation and praise for themselves.

Dr. Gall draws with great accuracy the distinction between Pride, which is an abuse of Self-Esteem, and Vanity, which is an abuse of the organ of which we are now treating. "The *proud* man," says he, "is imbued with a sentiment of his own superior merit, and from the summit of his grandeur, treats with contempt or indifference all other mortals; the *vain* man attaches the utmost importance to the opinions entertained of him by others, and seeks with eagerness to gain their approbation. The *proud* man expects the world will come to him and acknowledge his merit; the *vain* man knocks at every door to draw attention toward him, and supplicates for the smallest portion of honor. The *proud* man despises those marks of distinction which on the *vain* confer the most perfect delight. The *proud* man is disgusted by indiscreet eulogiums; the *vain* man inhales with ecstasy the incense of flattery, although profusely offered, and with no very skilful hand."

The diversified forms in which its activity appears are well exposed in the following lines of Young's 'Love of Fame:'

'The love of praise, however concealed by art,
Reigns more or less in every human heart;
The proud, to gain it, toil on toil endure;
The modest shun it but to make it sure.
O'er globes and sceptres, now on thrones it swells—
Now trims the midnight lamp in college-cells;
'Tis Tory, Whig; it plots, prays, preaches, pleads;
Harangues in senates, squeaks in masquerades;
It aids the dancer's heel, the writer's head—
And heaps the plain with mountains of the dead—
Nor ends with life, but nods in sable plumes,
Adorns our hearse, and flutters on our tombs.'

This passage is imbued with the very soul and spirit of the faculty.

This faculty is too much cultivated in education, by being almost universally appealed to as the chief stimulus to exertion and good behavior. It is only where improper subjects are taught, or proper ones are taught improperly, that such an appeal is required. In excessive activity it prompts to the equivocation, 'not at home,' when the person is otherwise engaged. It, as well as Self-Esteem, prompts to the use of the first person; but its tone is that of courteous solicitation, while that of Self-Esteem is arrogant and presumptuous.

When this organ is deficient, the individual cares little for the opinion of others; and if the selfish propensities predominate, the combination produces what are called 'impracticable' men, whose whole feelings are concentrated on self. Rebuffs and indignities never affect them. Free from restraints of delicacy, they practise upon the benevolence, the friendship, the interest of others, and often achieve their ends in spite of obstacles which to a sensitive mind would have been insurmountable.

We have in our country an interesting class, called dandies, which I perceive you are not without. In these, Love of Approbation is, in general, predominant; and I have almost always found them, at bottom, to be polite, obliging, and good-natured. This faculty is, however, more active in women than in men, and a greater number of them become insane from this feeling.

The *natural language* of this feeling is to carry the head backward, and a little to the side; it imparts to the voice a soft, soliciting tone, clothes the countenance in smiles, and produces in the lips that elegant line of beauty which resembles Apollo's bow. You see the natural language well manifested in this drawing. A lady, after I had delivered this lecture on one occasion, told me that she was surprised at my considering women more vain than men, when the latter might be seen with long, curled hair, their heads turned to one side, and a little cocked upward, walking about in the most affected manner. I mention this, that both sides may be heard.

A young lady, a relative of my own, went to a boarding-school, the governess of which was very particular about the manners of her pupils; and among other things, she taught the young ladies that they were to lean their heads over the left shoulder. In my young relative, Self-Esteem and Firmness were rather large, and consequently it was natural for her to hold her head erect. She did her best, however, to follow directions; but after sitting for some time with her head on one side, she took a kink in her neck, and had to resume her natural position. She would then get a scolding, would again try to hold her head in the required position, but the kink would again come; and finally the governess gave up the attempt, remarking that she got on very well in every thing else, but that she was excessively awkward and incorrigibly vulgar. I subsequently saw this lady, and remarked that in her head Love of Approbation was enormous, and that she naturally threw her head in this position; and because it was natural to her, she conceived it to be the beau idéal of graceful position.

Cautiousness.—This organ is situated near the middle of the parietal bone, where ossification generally commences, beneath what are called the parietal protuberances. Compare these skulls: This was picked up on the plain of Waterloo; you see that it seems truncated. This is a common Scotch female skull, in which it is very large. In this, the skull of a Cingalese boy, the size is immense.

This organ is the fountain of fear, or the instinct of self-preservation. Gall was struck by the extreme irresolution of a clergyman of Vienna, who could never decide upon any thing. A few days afterward, at an examination of a public school, this clergyman sat beside a Counsellor of State, of the same irresolute character, and so proverbial for his indecision as to have received the nick-name of *Cocadubio*. Dr. Gall sat immediately behind them, and observed the great projection of their heads in this region. Conceiving that Indecision and Circumspection might be connected with this particular part of the brain, he pursued his investigations, and soon verified his conjecture.

Fear appears to me to be the primitive feeling of this organ. Fear cannot be the absence of courage, as it is a positive emotion, which the negation of a quality cannot produce. The tendency of this sentiment is to make the individual apprehend danger, to make him keep a constant look-out, to hesitate before he acts, and to look to consequences, that he may be assured of safety. A full development is essential to a prudent character.

When the organ is too large, it produces a wavering, doubting, undecided disposition, and may occasion an absolute incapacity for vigorous and decided conduct. A great and involuntary activity of it constitutes *panic*, in which the mind is hurried away by an irresistible emotion of fear. I have noticed that it is almost invariably large in children, and we must all admire this providential arrangement. It is a guardian better than fifty nurses, and the place of which no external care can supply. A boy of six years of age, in whom it was very small, took off his clothes, and was about to jump into an old quarry full of water after his cap, which had been blown into it, when he was stopped by a passer-by. His mother was continually in alarm about him; danger he seemed incapable of comprehending. The boy subsequently died; and the mother, after the first emotions of grief were over, expressed her thankfulness that he had passed away.

When this organ is small, and Hope large, the future seems full of joy and gladness; there is a confident looking forward for brilliant success, with, too often, a neglect of the means of success. A person so organized seems to think that all desirable things will come unsought. He is subject, however, to keen visitations of disappointment; Hope does not fulfil her promises, and a pang follows. Elasticity is, however, soon regained, another alluring object presents itself, which, in its turn, eludes the grasp.

When Cautiousness is large and Hope small, the present cannot be enjoyed, on account of fearful forebodings. The future seems dark and cheerless, and evils are suffered by anticipation which are never realized in fact.

It may be diseased; in fact, in the old country it is more often diseased than any other organ. When it is so, it gives most fearful apprehensions. A lady, in whom it was morbidly affected, rose thirteen times in one night to see if her children were alive. In this case, Philoprogenitiveness also was large. When the

organ is in this diseased condition, people often try to laugh the patient out of the notion. They might as well try to laugh them out of the tooth-ache. The rational way is to subject him to a course of moral and physical treatment adapted to the peculiarities of his case.

In Dr. Dodd, who was executed for forgery, this organ, as you perceive, is very small. Compare it with this of the Rev. Mr. Martin, or this of King Robert Bruce. Dr. Dodd committed forgery on the Earl of Chesterfield. He was brought up for examination privately, and his case excited very painful sensations. All the persons got up and went out of the room, in which there was a fire, leaving Dr. Dodd with the papers by which alone he could be convicted, hoping that he would destroy them; but on their return they found, with horror and surprise, that he had not done so.

In many animals, this region is found in a state of high activity, and is always larger in the female than in the male. This was noticed by Gall, and is corroborated by Captain Franklin and others. This organ is large in the Hindoos, who, with Combativeness small, are remarkably timid; and in the North American Indians, who, with large Destructiveness and small Combativeness, make war by stratagem. It was small in the skull of the soldier in New Holland who killed and ate seven men. When combined with large Vitaliveness, it produces habitual fear of death. Combined with large Acquisitiveness and Self-Esteem, it produces general caution and slowness in business; the individual saves, and is content with small and secure profits. If Cautiousness be small and Acquisitiveness large, the consequence is rash speculation. When large in children, it is, as I before remarked, better than fifty keepers. A lady was very apprehensive for her little son, who had a disposition to climb and perform other feats of activity. Perceiving his Love of Approbation and Cautiousness large, I told her that the boy performed his feats to gratify the first, and would not undertake them unless observed. Therefore her remedy was to let him alone, for his Cautiousness would guard him from danger.

This organ is larger in the English than the Turkish head. Mr. Forster, who was travelling in disguise through Turkey, was detected by a Georgian merchant, by the superior development of this part in Mr. Forster's head to that of the Turkish. Dr. Brown speaks of *Melancholy* as a primitive emotion. This is an abuse of the faculty.

Suicides have generally this organ and Destructiveness large, and Hope small. Cautiousness, when stimulated to excess, gives rise to intense melancholy, anguish and anxiety; and by thus rendering life extremely miserable, it indirectly prompts to this result. Let no one suppose suicide to result from mere error of judgment. It proceeds from internal and involuntary feelings of a diseased nature, the misery and torment of which, he who has never felt them cannot accurately conceive. I once knew a case from this combination: large Self-Esteem, Combativeness, Destructiveness, and Firmness. The suicide was a boy of thirteen years of age, whose brother, after trying various other modes of reclaiming him from vicious conduct, had severely beaten him. The boy, seeing no other mode of revenge, hanged himself; and so firm was his resolve, that he kept his legs drawn up to the body, lest they might touch the floor.

This faculty gives a tendency to open the eyes wide, to roll the eye-balls sideways, and to turn the head from side to side. From this arises the term *Circumspection*. A hare surprised in the field, setting on its hind legs, its eyes open, and its head moving to and fro, is a fine emblem of this expression. The language of Destructiveness, Secretiveness and Cautiousness, is well expressed by Sir Walter Scott, in his *Lord of the Isles*:

"For evil seemed that old man's eye—
Dark and designing, fierce, yet shy;
Still, he avoided forward look,
But slow and circumspectly took
A circling, never-ceasing glance,
By doubt and cunning marked at once,
Which shot a mischief-boding ray
From under eye-brows shagged and gray."

HINTS.

Study ease of accent, attitude, gesture; and it will at length become what is called second nature.

Politeness is the shadow of kindness, but the shadow is worth nothing without the substance. C.

NATIONAL MELODIES OF AMERICA;

The poetry by George P. Morris, Esq., adapted and arranged by

Chas. E. Horn. Part I. New York, Davis & Horn: 1839.

Men whose energies have been successfully directed to the development of our mental or physical resources, to bring into action the elements of prosperity, and in advancing their country in the scale of nations,—seldom fail to receive their reward. Fame and emolument are the certain fruit of exertions, the results of which are seen in national greatness and individual wealth. But labors, the tendency of which is to elevate and refine, to add to our domestic enjoyments and cheer our solitude, are often treated with contempt while they awaken our sympathies, and held up as frivolous while they excite our admiration. The accumulation of wealth and its attendant honors, hold out the greatest incentive to the exertion of our powers. The quiet and unobtrusive student glides unnoticed through the crowd, and the satisfaction which arises from his success is too often the only reward for years of great exertion and weary solicitude. The influence which he exercises is unseen in its operation and silent and slow in its progress. He rears no imposing monument to perpetuate his fame, his only road to distinction lies through the intricate mazes of popular favor, and he often passes through life unrewarded and neglected, leaving to his heirs the fruits of his labors, and to posterity the vindication of his name.

When we consider how little we know of the origin of many of the sublimest productions which the genius of the past has bequeathed us, and of those gifted minds whose inspiration has opened for us a path into the regions of fancy, it is natural to inquire how far we are indebted to contemporary writers for those sources of pure and elevated enjoyment, and to award to them the full measure of our admiration and homage. Many productions, the result of humorous whim or fitful inspiration, have served their purpose when they have been read, laughed at or admired, and then are numbered with "the things that were." But the works of true genius bear within themselves the elements of perpetuity, they become incorporated with the national mind, and give a tone to its exercise, whether for utility or amusement.

It is such works as address themselves to our finer feelings, like the songs before us, that possess this distinguished preëminence. They are touching and pathetic, and strike the chord of our dearest sympathies. Possessed of no exotic grandeur or dazzling brilliancy, they are simple flowers scattered by the waysides of life, whose modest and unassuming beauty charm and variegate the paths of our existence. On that account they are, as they ought to be, treasured and admired. Some of them are already familiar to the lovers of sweet poetry; the airs to which they are adapted, are purely national. It is as a national work that they appear before us, and in that light they demand an extended notice.

In his preface to these melodies, Mr. Horn has so happily illustrated their origin and progress, that we cannot do better than lay it before our readers. He says:

"In the spring of 1837, my professional engagements induced me to visit the enterprising and hospitable city of Natchez on the Mississippi, where first I heard the melodies of the South, sung, danced and accompanied on the banjo and violin by the negroes of the different plantations; and in this section of the country alone, can they be heard with their own peculiar expression of joyousness and melancholy, unaffected by the amalgamation of what is termed science and taste, which, if too lavishly introduced, destroys all national music; *feeling* being its only requisite. Simple national feeling constitutes its sole charm."

"Here first I heard *'As I was go'en down Shinbone Alley,'* sung by one of the negro boys with its native simplicity. He was called in to give a specimen of this kind of song; he had an interesting voice, was about nine years of age, and when the line occurred *'He took his gun and shot de nigger,'* he gave such a melancholy turn, in place of the comic humor I had usually heard thrown into it, that I felt assured, a pathetic and mournful song might not only be made of *this*, but also of many other airs I had heard in the course of my journey. I had often set to music, words selected from the newspapers, but without any knowledge of their authors; amongst these were some written by General Morris, with whom, circumstances at a more recent period made me acquainted, and established a friendship between us of which I am proud, and which has given me more pleasure than it is proper for me here to express; suffice it to say, I described to him the impression these songs had made upon me, and also stated that my esteemed friend, Dr. Robinson, of Petersburg, Virginia, (a true lover of native melody) coincided with me on this subject, namely, as to the effect which might be produced by adapting pathetic words to these melodies. I requested General Morris to assist me in redeeming these beautiful refrains from neglect, particularly the one entitled *'Long time ago.'* The proposition to transform *this* into a plaintive song and still retain the burthen, at first startled him; he had little confidence in his subject, fearing it would never command a serious listener after Mr. Rice's *'Shinbone Alley,'* but, with his usual kindness and good nature, he cheerfully commenced his task—with what success, the thousands of copies sold, and the number of editions it has gone through, can best testify. His predictions to a certain extent were true; for some time after its introduction to the public by Mrs. Horn, (for whom it was written and adapted,) when she arrived at the line *'Long time ago,'* it elicited a general smile, but at the conclusion of her song, she left her auditors with tears in their eyes, and a universal demand for a repetition, arising purely from the expression of the words and music. This was the result of the first experiment, *The Southern Refrain.*

"*The Northern Refrain,* (the second number of the series) has nothing national in it except the words and burthen. It is the wild and singular cry, or carol, of the sweeps about the city of New York. The national anthem of "God save the King," had its origin from as humble a source, and although it has now as many claimants as *Junius*, it was originally sung about the streets of London in a similar way. *'De Tanti Palpiti,'* it is said, was suggested to Rossini, by hearing a fisher-woman in the market carol the subject, or refrain, while attending her stall.

"With these examples before me, I shall offer no apology for introducing the untutored strains of the lowly, into the drawing-rooms of the accomplished and fashionable. It is a curious fact, that the airs of the South partake greatly of the Scotch character, particularly one called *'Natchez under the Hill.'* This is not to be wondered at, however, when it is remembered that every second or third planter in that section of the United States, is either a *Mac* or a *Dunbar*. I cannot here omit to remark, that from these gentlemen generally, I received much hospitality, and derived a great deal of information.

"My present object is to bring into notice these melodies, which have long been neglected by others more capable perhaps, than myself, of doing them justice. In publishing this part of the series I look forward with confidence to that degree of encouragement which may enable me to continue them. I have endeavored to add something of value to the lyrical stores of this country; if I have succeeded (with the assistance of General Morris, who has so obligingly aided me in the cause) I have attained my object.

"Should the rigid critic complain that I have, in one or two instances, taken liberties with the originality of the melody, a little

examination will convince him that I have done so with scrupulous care, and in no case where it could possibly be avoided.

"With these remarks this *First Part* of the series of *'National Melodies of America,'* is respectfully submitted to the public, by theirs, obediently,

CHARLES EDWARD HORN."

"*Long time ago,*" the first of the series, has been some time before the public. Its popularity has ceased to be a matter of question, if any doubt of its excellence ever existed. As a poetical gem, it is the purest and most perfect that we have ever read, if we except *"Woodman, spare that tree!"* by the same author. Its pathos and tenderness are in exquisite keeping with its plaintive burthen, and the sensibilities awakened by the melody, chime harmoniously with the tale of sorrow which the words unfold.

Near the lake where droop'd the willow,
Long time ago!
Where the rock threw back the billow,
Brighter than snow;
Dwelt a maid, beloved and cherish'd,
By high and low;
But with autumn's leaf she perish'd,
Long time ago!

Rock and tree and flowing water,
Long time ago!
Bee and bird and blossom taught her
Love's spell to know!
While to my fond words she listen'd,
Murmuring low,
Tenderly her dove-eyes glisten'd,
Long time ago!

Mingled were our hearts forever!
Long time ago!
Can I now forget her?—Never!—
No, lost one, no!
To her grave these tears are given,
Ever to flow;
She's the star I miss'd from heaven,
Long time ago!

The characteristics of General Morris's poetry are chastened fervor and natural pathos, without the meretricious sweetness which surfeits and sickens. He lays the lowliest and loveliest feelings of our nature open before us in unadorned beauty, and therein lies the charm of his writings. His muse delights to portray the silent and unseen workings of the heart, and those emotions "that lie too deep for tears."

Of the *"Northern Refrain,"* we are told that "Mrs. Horn, on her arrival in this country, was delighted with the originality and touching simplicity of the morning carol of the New York sweeps. This she committed to memory, when it occurred to her that a new melody might be so arranged as to terminate each verse with that curious musical gem. To her husband she committed the task, and the result is a production of exquisite delicacy and sweetness. General Morris furnished the words, which were written in strict accordance with the lady's wishes; and the composer and writer have done their utmost to embody *her thought*. This little *bijou* is sung by Mrs. Horn in a manner peculiarly her own. On one occasion it elicited a *triple* encore, and produced a sensation seldom witnessed in a concert-room. The song has since become fashionable, and the carol that we had been accustomed to disregard when sung from the chimney-tops by the poor sweeps, is now warbled to admiring listeners, by fair

and gentle ladies in the drawing-room! None but a man of genius like Horn could have wrought this change, or have so managed his subject as not to render it nonsensical, considering that there is but one step from the sublime to the ridiculous. In the present instance, Mr. Horn has produced a musical novelty that cannot fail to be universally popular, at least among the good inhabitants of Gotham, whose fancy he certainly has hit."

We subjoin the words of this song; but it would be impossible for us by any combination or arrangement of letters to convey any adequate idea of the carol. We request such of our readers as have not heard a New York sweep, to draw upon their imagination for the melody.

Through the streets of New York city,
Blithely every morn,
I carol'd o'er my artless ditty;
Cheerily though forlorn!
Before the rosy light, my lay
Was to the maids begun,
Ere winter snows had pass'd away,
Or smiled the summer sun.
In summer months, I'd fondly woo
Those merry, dark-eyed girls
With faces of the ebon hue,
And teeth like eastern pearls!
One vow'd my love she would repay—
Her heart my song had won—
When winter snows had pass'd away,
And smiled the summer sun.
A year, alas! had scarcely flown—
Hope beam'd but to deceive—
Ere I was left to weep alone
From morn till dewy eve.
She died one dreary break of day!—
Grief weighs my heart upon!—
In vain the snows may pass away,
Or smile the summer sun.

We now come to "MEETA," one of the most exquisite gems that has ever graced the tiara of the muse. Independent of the thrilling music to which it is adapted, it is a beautiful poem, rich in appropriate imagery, graceful, flowing and melodious. Nothing can be finer than the sentiment, or more chaste and delicate than the manner in which it is conveyed.

Where the ivy-vine is creeping
Green and strong;
In a cot sat Meeta weeping
All night long!
False the vows her lover plighted
As the changing moon;
And that fair one mourn'd—a blighted
Rose of June!
Heaven crush the wretch inhuman
Could betray
Faithful, fond, confiding woman,
Lured away
By the star of her affection,
By love's winning tone;
Leaving her without protection,
Lost and lone!
Swift the lightnings flash above her!
Thunders roll!
In the tempest flies her lover,
Light of soul!
Like the fern in frosty weather
Droop'd that faded fern!—
Her heart and morning broke together
In the storm!

The "*Western Refrain*" is a song of altogether a different character from those already noticed. The writer has described a band of emigrants travelling over the Alleghany mountains to the "far west," in pursuit of happiness and independence. He had a difficult task to perform, trammelled as he was by the imperative requisites of the composer, but he has acquitted himself ingenuously and with his accustomed ability. The music to the following words is spirited and life-inspiring. It has been sung at the principal theatres of the north with marked success.

Droop not, brothers!
As we go
O'er the mountains,
Westward, ho!
Under boughs of mistletoe,
Log-huts we'll rear,
While herds of deer and buffalo
Furnish the cheer!
Fife o'er the mountains—steady, boys!
For game afar
We have our rifles ready, boys!
Aha!
Throw care to the winds,
Like chaff, boys!—ha!
And join in the laugh, boys!
Hah—hah—hah!
Cheer up, brothers!
As we go
O'er the mountains,
Westward, ho!
When we've wood and prairie-land,
Won by our toil,
We'll reign like kings in fairy-land,
Lords of the soil!
Then westward, ho! in legions, boys!
Fair freedom's star
Points to her sunset regions, boys!
Aha!
Throw care to the winds,
Like chaff, boys!—ha!
And join in the laugh, boys!
Hah—hah—hah!

"*Love, honor and obey*," is in the General's best vein. This song is of the same class as "*Rosabel*," "*O would that she were here*," and the numerous other sentimental effusions to which his prolific muse has already given birth. We do not know of any thing that would come with greater sweetness from the rosy lips of a lovely maiden than the words of this song.

When Love in myrtle shades reposed—
His bow and darts behind him slung—
As dewy twilight round him closed,
Lisette these numbers sung:
"Oh, Love! thy sylvan bower
"I'll fly, while I've the power;
"Thy primrose way leads maids where they
"Love, honor and obey!"
"Escape," the boy-god said, "is vain!"
And shook the diamonds from his wings:
"I'll bind thee captive in my train,
"Fairest of earthly things!"
"Oo, lovely archer, go!
"I freedom's value know:
"Thou hence away, to none I'll say
"Love, honor and obey!"
"Speed, arrow, to thy mark!" he cried—
Swift as a ray of light it flew!—
Love spread his purple pinions wide,
And faded from her view!

Joy filled that maiden's eyes—
Twin load-stars from the skies!—
And one bright day, her lips did say
"Love, honor and obey!"

The last song of the series is a tale of every day occurrence in fashionable life, beautifully told! We shall not anticipate the effect of its perusal by any further remark, but lay it before our readers, leaving its intrinsic merits to speak its praise.

The moon and all her starry train,
Were fading from the morning sky,
When home the ball-room belle again
Return'd, with throbbing pulse and brain,
Flush'd cheek and tearful eye.

The plumes that danced above her brow,
The gems that sparkled in her zone,
The scarf of gold-wove myrtle bough,
Were laid aside—they mock'd her now,
When desolate and lone.

That night, how many hearts she won,—
The reigning belle, she could not stir,
But, like the planets round the sun,
Her lovers followed—all but one—
One all the world to her!

And she had lost him—marvel not
That lady's eyes with tears were wet:
Tho' love by man is soon forgot,
It never yet was woman's lot
To love and to forget!

We sat down to review these melodies, fully impressed with their importance as a national work, and with every disposition to judge impartially, how far the poet and composer had accomplished their task. Both these gentlemen are well known. We were justified from the popularity they enjoy, to expect much from their united labors, and we have not been disappointed. The neglect from which these melodies have been rescued, could not have been greater, than the discrimination, judgment and taste necessary to strip them of their crudity and grossness, and render them fitted for the exalted station in which they have been placed. But the task of the poet was of a still more difficult nature. Some, indeed the most, of our original airs, have been sung in words of an absurd character, and we all know how difficult it is to retain any influence on the mind divested of its original association, and still more to replace that association by another of a higher and altogether different description. With these remarks, we close this notice of the first part of the national melodies, trusting, that public patronage will be so far extended, as to induce the authors to persevere in their good work.

PERE LACHAISE.

Let's talk of graves, of worms, and epitaphs.—*Richard II.*

Curatio funeris, conditio sepulturæ, pompa exequiarum, magis vivorum solatia quam subsidia mortuorum.—*St. Augustine.*

It is not my intention to present the reader with a description of this famous cemetery. It has been already the too hackneyed theme of the tourist. I would as soon think of describing Cheltenham or Saratoga. The subject has been exhausted, and there is nothing left to refresh interest or reward curiosity. Besides, the French model has already found copyists at home, and both Boston and Philadelphia can now boast of their transatlantic imitations of the celebrated spot which bears the name of the confessor of Louis the Fourteenth. The cities of the puritan and the quaker have entered the lists with the carnival metropolis of France. With the prejudices of our English stock,

heightened by the national self-complacency for which we are proverbial, we are yet an imitative people, and ransack the earth for fashions and inventions which we sometimes exaggerate with the zeal of the neophyte.

That familiarity breeds contempt, is a saying as true as it is trite. Daily use is a sad foe to sentiment and romance; and custom soon strips off those beautiful illusions which invest certain objects with a poetical charm. Such things will not bear close or frequent inspection, much less to be handled or analysed. The experience of every one must have taught him, that time, distance, novelty, rarity, contribute more than intrinsic qualities to that mysterious interest which captivates the imagination. Who has not felt his enthusiasm for a favorite author, impaired by the admiration, real or affected, of the indiscriminating crowd, which sullies his beauties, as the delicate bloom of flowers is soiled by coarse and clumsy familiarity? What were beauty itself without the protecting veil of a chaste reserve?

The modest charm of not too much,
Part seen, imagined part.

It is stated that an omnibus now plies between Athens and the Piræus. Doubtless, this utilitarian innovation contributes much to the public convenience, and it would be hard to deprive the subjects of Bavarian Otho, whom the Bæotians themselves would have styled a barbarian, whatever his personal qualities may be: it would be cruel, I repeat, to deny the worthy denizens of the city of Minerva the hourly convenience of this popular vehicle, even *Minervâ invitâ*. Yet no scholar can think, without repugnance, of the intrusion upon such classic ground of the cockney locomotive, which must contrast so strangely with the recollections and monuments of the place; the shade of Pericles and shadow of the Parthenon. Through a dreary summer's day did I toil, on foot, along the weary road, which, traversing the *campagna di Roma*, leads from the mouth of the Tiber to the city of the Cæsars. Yet I confess, it was not without a feeling of repugnance, I afterwards learned from an enterprising American that he had corresponded with the late Cardinal Gonzalvi on the subject of establishing steamboats on the Tiber. Certainly *la route vaut bien les souvenirs*, as the Frenchman observed in a similar case, yet the feeling described is natural to every refined or cultivated mind. I should not then have selected so hackneyed a topic, had I not an object in view, which may be gathered from the following discursive remarks.

I repeat, then, I am not about to describe Père Lachaise, but to set down the impressions which it has left on the mind, after a lapse of some years. And first, I shall observe, that it is not a place which I admire, or rather, which corresponds with my taste and sentiments. It has not the soothing, contemplative tranquillity, which should hallow a spot sacred to the repose of the dead. It is not far enough removed from life; it touches the very confines of tumultuous existence; it echoes the voice of the great city, and vibrates with the pulsations of its mighty heart. It speaks too much of the world and its vanities. It savors more of the region on this side the grave, than of the awful realm, the shadowy kingdom beyond. Dust and ashes it clothes in purple and fine linen; and builds palaces

for corruption and the worm. It is a spacious necropolis—a wide city of the dead—gay, gorgeous, and glaring. With the same pomp of worldly ostentation, it has not the solemn grandeur, the dread magnificence, of the pyramid and the catacomb—gloomy memorials of “kings and counsellors of the earth, who built desolate places for themselves.”* The soothing lines of Gray, suppressed, or rather excluded from his inimitable elegy, cannot be applied to Père Lachaise:

Lo, how the solemn calm that breathes around
Bids every fierce, tumultuous passion cease,
In still small accents whispering from the ground
A grateful earnest of eternal peace.

It is crowded with columns, obelisks, pyramids, vases, monuments of every form and design, from the splendid mausoleum to the humble cross. Ranged in successive ranks, and constructed generally of white marble, or light-colored stone, and adorned with gay flowers and gaudy chaplets, the tombs of Père Lachaise seem rather tricked out for show, than cherished from affectionate reverence. Not that I would imply, while disapproving of the taste displayed, that its mourners are not sincere, for in spite of the common prejudice, the French are a people of strong and enduring affections. We are told that the ancients were in the habit of adorning their sepulchral monuments with gay devices and festal processions, in order to take from death that horror which their religion could neither dispel nor soothe. Pictures of beauty and images of grace withdrew the contemplation from the melancholy realities within and beneath. The French have been compared to the Greeks in temperament, and hence, perhaps, their recourse to expedients, which, if less graceful and refined, are still designed to cheat the heart with fond illusion:—vain effort to strip the grave of its terrors; for still

Keeps Death his court; and here the antle sits
Scoffing his state, and grinning at his pomp.

With some exceptions, the most conspicuous monuments in Père Lachaise are those of the marshals and other dignitaries of a glorious but fleeting empire. The heroes of a hundred fields have here pitched their marble tents for an enduring sleep; the relics of uncounted conflicts are gathered in this common receptacle. The champions of Marengo, of Austerlitz, and of Waterloo; of the Pyramids, the Alps, and the Moskova, repose side by side, in that profound slumber, which a voice louder than that of the clarion or the battlefield shall break on the last day. The most costly, if not magnificent monument, is that of a Russian lady of quality, and bespeaks the “love or pride” of her surviving lord, whom I saw in Florence, the impotent possessor of untold riches. He has since been deposited at her side.

Hoc quod premis **** habeto
De tot agris torrie.

There are but few memorials of the *ancien régime* in Père Lachaise. It speaks more of the Chaussee d'Antin,† than of the Faubourg St. Germain.‡ Its splendor is that of the *parvenu*, the *novus homo*. It has usurped the aristocratic domain of the high priest of Louis the Grand, the monarch who built the Louvre and planted Versailles. Your banker is now lord if not noble; and the sceptre has passed from the Thuilleries to the

* Job.

† The new quarter where the principal bankers reside.

‡ The quarter of the old noblesse.

Bourse. Among the anti-revolutionary relics are the tombs of Molière and Lafontaine—the latter appropriately surmounted by the image of a fox, sly reynard having been from time immemorial, the principal personage and hero of the apologue.

But the monument which the eye of the stranger visits with the greatest interest is the old tomb, where side by side, beneath a gothic canopy of stone, repose upon a mouldered sarcophagus, the sculptured images of Abolard and Eloisa. Rigid in attitude, in the uncouth but solemn style of the middle ages, like the mailed knights stretched at full length in the venerable church of the Templars in London, they contrast as strangely with the objects which surround them as though they were to rise from their graves, and in the habiliments of ancient days, stalk sternly through the streets of Paris. The tomb was removed from the church of the Paraclete, where their relics had reposed undisturbed for centuries, and deposited within the precincts of Père Lachaise. If not indispensable to its preservation, this was a violation of their time-honored sanctuary, which neither the heart can approve nor the taste justify. Their spirits must have been saddened by the spectacle, even though a voice came not forth from their ashes, uttering with plaintive deprecation, “Leave us, ah! leave us to repose!” Distinguished as one of the ablest polemical disputants and writers of his day, Abolard is now remembered only as the unhappy lover of the repentant though still fond Eloisa. So strong is the sympathy of human affections, that love has preserved the fame which genius could not embalm. It is consoling to know that their errors were redeemed by long years of contrition, and that breathing their last sighs in the bosom of the church, they died in the “odor of sanctity.”

But while I commemorate the great, the rich, and the famous, let me not forget the humble poor. A solitary *corbillard* approaches, with no attendant, save the sullen driver, in dark, dingy livery, and perhaps a half-famished dog, which follows with stealthy pace, the very picture of destitute fidelity. The covering is removed from a vault, or rather pit, the common receptacle of all who are interred during the day, without the means of purchasing a separate grave. Into this dreary dungeon of the dead, the miserable shell is unceremoniously cast, there to mingle and moulder with its fellows. Though sad and desolate such doom appear to the spectator, yet of how little moment to the disenthralled spirit! Death, it has been truly said, is a sad leveller, and there is no aristocracy in the grave, whatever pyramid and obelisk, storied urn or animated bust, may proclaim. “The rich and the poor meet together—the Lord is the maker of them all.”

Père Lachaise is a favorite resort of the lively population of Paris. It is without the walls, what the Thuilleries and the Luxembourg are within. It is not uncommonly the rendezvous of lovers, of some I fear who “love not wisely but too well,” an association which calls to my mind the continuous records of Cupid and Death in the newspapers. Married—Died. I have sometimes inclined to the belief, that by stripping the grave of its visible terrors and clothing it with an almost winning aspect, suicide is rendered less formidable to the mind. In no capital is this crime so common as it is in Paris, notwithstanding the popular sarcasm

upon the climate of England. If indifference to death constitute courage, then are the French the bravest of civilized people. Not to speak of the philosophy and sang froid with which they meet dissolution, in bed, in battle, or on the scaffold; nor of the fortitude or indifference displayed by the numerous victims of every age, sex and condition, in their sanguinary revolution; the frequency and mode of their suicides, show that they part lightly and readily with existence, for which they have, nevertheless, a keen relish. The dreadful act is often performed with a sort of dramatic preparation or romantic incident, which can only be intended for effect. Sentimental epistles are carefully prepared for posthumous publication, and some mode of exit selected which is considered distinguished or picturesque. The most approved and fashionable, is to obtain the company of a lady for the last journey, who must, by no means, however, be the wife of the gentleman, as that would be considered in very bad taste. The party then cast themselves down from an upper story, or take prussic acid, or inhale carbonic gas, or perhaps stab themselves or each other with a poniard, borrowed for the occasion from the theatre. I have now a Paris paper before me, which states, that on the day before, a well dressed gentleman threw himself headlong from the lofty *Arc de l'Etoile*, and his body was taken up and carried to the Morgue. The son of an eminent French *savant* shut himself up in his chamber and inhaled the fumes of charcoal, recording his sensations until the pen dropped from his hand, leaving the last word unfinished. A story is told of two genteel looking young men, who called at a fashionable restaurateur's in Paris, and very deliberately ordered a sumptuous repast, to be served up in a private apartment. After they had eaten and drunk of the best, with great appetite and apparent glee, they requested to be left alone. Curiosity was at last excited by their long silence, when upon entering the room they were both found dying or dead, having taken poison. The bill was settled by paying the debt of nature.

These are a few examples out of many which might be cited. A curious book, would be a history of modern French suicides. Morbid vanity, a spurious philosophy, disappointed or criminal love, thwarted ambition, losses at play—these are among the principal inducements to self-immolation in France. In England, both the motive and manner are widely different. There, melancholy, *tædium vitæ*, reverses of fortune, &c., are the chief inducements. The Englishman too, selects a less poetical mode of destroying himself. He is intent upon the act alone, and not upon the impression which it is to make upon the public. He takes ratapane, or fires a pistol into his mouth, or hangs himself to the bedpost, or drowns himself in a horsepond. He dies because he is tired of life, or has not the means of living, or because it is his humor, but not for effect—to get into the newspapers.

There is one day in the year, called from that circumstance *le jour des morts*, when crowds visit Père Lachaise, for the ostensible purpose of doing honor to the departed, whose tombs are then freshly adorned with chaplets of flowers and wreaths of *immortelles*. There is something in such a custom too public, artificial and dramatic, for a purpose so sacred and solemn. Genuine grief does not obtrude itself upon the public

gaze, but covets solitude, or, at most, the sympathy of tried friendship. It does not, as has, I think, been observed, bargain at the public gate, for a garland of artificial flowers, and then hang it perhaps, by proxy, upon the tomb of parent, wife or child. On such occasions, however, I suppose, the real mourners are not found among the crowd, or at least form but a small number. Hundreds are attracted to the place by curiosity, custom, or the thirst for pleasure or excitement. The day is regarded as a fête, and is celebrated by many with the thoughtless gaiety which characterizes that of Versailles or St. Cloud. All is motion, bustle and glare. Groups of gaily dressed people, chiefly of the middle classes, *les badauds de Paris*, throng the vast cemetery, which does not present an aspect either mournful or solemn. Venders of refreshments and other trifling objects, line the outside of the wall and the narrow street inhabited by the lapidary artists, vexing the air with their shrill, discordant cries. There is a harsh, grating sound of the world, and its vulgarest vanities, which harmonizes ill with the valley of the shadow of death. The scene may be fair to the eye, but it is not soothing to the heart. It brings to mind Holbein's Dance of Death, or the cholera *galoppades*. "*Carpe diem!*" "Let us eat, drink and be merry, for to-morrow we die," seems to be the prevailing sentiment. It is a hollow, thoughtless, aching gaiety.* It recalls the last carouse of the suicide, the sardonic grin of death, the Egyptian banquet in the presence of a skeleton. The apparent absence, too, of religious feeling, is chilling to a mind not trained in the schools of a skeptical philosophy. You feel, as though, for the gay, thoughtless multitude assembled here, life and immortality had not been brought to light. Notwithstanding the chapel which crowns the hill, the *ora pro nobis* and *requiem* often inscribed upon the humbler monuments, the hope of a future life, is not the sentiment which predominates in Père Lachaise. "This is the place of eternal sleep," though no longer written upon its portals, is still, it is to be feared, inscribed upon the hearts of many who enter its gates. Turn we from the gorgeous trappings and gay masquerade of this carnival of death, to the consoling faith expressed in these simple lines of a religious poet:

Sin-blighted though we are, we too,
The reasoning sons of men,
From one oblivious winter called,
Shall rise and breathe again;
And in eternal summer lose
Our threescore years and ten.

From such a scene the heart reverts with melancholy pleasure to the holy calm, the soothing tranquillity of the village churchyard, where the yew, the cypress and the holly, planted by the hand of nature or well-initiating art, overshadow the humble dwellings of mortality, moistened by the tears and decked by the care of silent, unobtrusive affection; where stillness abides as in a sanctuary, and the air is fragrant with the pure breath of the rose, the violet, and the eglantine. Such a one is now pictured to me by memory, where, a visionary boy, I often sauntered with pensive meditation. It is seated upon the brow of a gentle eminence, gra-

*These remarks are not intended to apply to the French generally, for whom the writer entertains a high respect; but are simply expressive of the impressions left by Père Lachaise.

dually declining on one side, while on the other it descends abruptly to a wood-fringed rivulet, whose presence is revealed by one unvaried sound of plaintive murmur, that seems the natural voice of solitude—where sleep the forefathers, simple but not rude, of the hamlet,—their modest tombs almost hid by tufted grass and creeping wild-flower, are scattered in graceful disorder to the edge of a dense grove of cedars, whose solemn foliage harmonizes well with the scene and the emotions which it awakens.

A pillar'd shade,
Upon whose grassless floor of red-brown hue,
By sheddings from the pining umbrage tinged
Perennially, beneath whose sable roof
Of boughs ***** ghostly shapes
Might meet at noontide; Fear and trembling Hope,
Silence and Foresight—Death the skeleton
And Time the shadow—there to celebrate
As in a natural temple, scattered o'er
With altars undisturbed of mossy stone,
United worship.

As an interesting incident illustrative of French enthusiasm, connected with my recollections of Père Lachaise, it may not be inappropriate to introduce a short account of the obsequies of the celebrated Talma, which I witnessed. The great tragedian had refused, during his last illness, to receive the visits of the archbishop of Paris, who was anxious that he should die reconciled with the church—and, with that view, made the most strenuous and persevering efforts. In explanation, however, it must be observed, that it was necessary Talma should make a solemn renunciation of a profession which is without the pale of catholic communion. Talma refused, as he declared, to stigmatize, by the last act of his life, his professional brethren and the art which had bestowed upon him fortune and renown. This courageous resolution, at a moment when fortitude is most difficult, endeared him the more to a people who were at that time animated against the church with all the fervor of political zeal. The rites of religion being withheld from his obsequies, it was accordingly determined to indemnify his memory, by a splendid popular pageant. Thousands followed, with uncovered heads and in solemn silence, the nodding plumes of the magnificent hearse, as it wended slowly along the extended line of the boulevards. The coffin was covered by a rich pall, upon which were placed, as emblems of his art and fame, the toga, the poniard and the laurel crown. Never did I witness in a crowd such solemnity and reverence. Had the air been rent by thousand acclamations, they could not have equalled the enthusiasm of the profound stillness which prevailed. It was like the march of an army without banner, trumpet or drum. As the procession advanced, its numbers constantly augmented, until, far as the eye could reach, stretched one dense, moving mass. Upon reaching the gate of the cemetery, the coffin was taken from the car, and borne, as in triumph, to the spot prepared for its reception. The spectacle resembled an apotheosis rather than a funeral. The contiguous ground was occupied by a multitude anxious to do reverence to the remains of the great tragedian, the pride of France, who was mourned as a national loss. Talma had been the friend and the favorite of Napoleon, and the recollections of the glories of the empire were associated with the scene. Orations were delivered at the grave by

several authors and professional brethren, who all bore high and touching testimony to his genius and merits. The spectacle was truly French, yet it was imposing, and I confess that I caught no small portion of the common enthusiasm. It was, indeed, a solemn scenic representation, and was an appropriate termination of the career of this unrivalled master of the tragic art.

I must now exercise my rambling privilege, by taking the reader, if he will accompany me, to Rome, where I witnessed a funeral ceremony equally curious, though very different from the one which has just been described. Strolling one afternoon through the streets of the ancient capital of the world, without any object save the gratification of a vague curiosity, the shades of evening began to fall while I was yet distant from the quarter where I lodged. Just as I was about to turn my steps homeward, my ear was saluted by a strange, wailing sound, which seemed to proceed from afar. It approached, however, rapidly, and I had not waited long before a singular procession emerged from an adjoining street. A coffin, borne on the shoulders of men who had advanced with a rapid step, was followed by a long train of monks, cowed to the chin, with apertures for breath and sight. Each held aloft a torch, which flared wildly as they went, uttering a muffled, melancholy chant. Their dark livery, masked visages, hurried gait, glaring torches, and wailing, lugubrious tones, combined to impress me with a feeling bordering on fear. It was a scene worthy of the pen of Gæthe, or the pencil of Reitsch. The witches in Macbeth could not have presented a more fiendish aspect upon their barren heath, or dancing around their cauldron of hell-broth. I almost imagined, that a troop of howling demons were dragging some miserable victim to the black abyss. Impelled, however, by a feeling stronger than mere curiosity, I followed the ghostly procession until we entered together an old church in the neighborhood of the *Parts del Popolo*. Here the monks performed a brief service, in the same hurried manner and muttering tones. They then retired, leaving the coffin in the hands of the officers of the church, who, carrying it into an adjoining apartment, lifted a stone trap from the floor, and plunged it headlong into the yawning vault. A loud crash, followed by a hollow, rumbling sound, was scarcely heard when the stone was replaced, and I came away with feelings which I shall not attempt to describe.

The summit of Père Lachaise affords, perhaps, the finest prospect of Paris, and the surrounding country. Far as the eye can reach, it wanders over a spacious plain, covered with towns and villages, crowned by the towers of St. Denis, and the battlements of Vincennes, and presenting a distant view of the ancient castle and forest of St. Germain, with other objects almost equally striking. At intervals, the winding Seine is beheld, like a silver band stretched loosely across the landscape. The prospect is pregnant with life, beauty and interest, yet calm and subdued. Immediately below spreads the mighty city, with its lofty domes, crowning towers, piercing spires, splendid palaces, dense streets and spacious gardens. Its discordant sounds and multitudinous voices are all lost in one low muffled cadence, heard remote like the murmur of a distant ocean. There stands the living, here the dead city. What an epitome of human fortune is comprised within those ample walls! What a mass of being,

what a current of life, what a stream of passion, is ever pouring through those populous streets! What a fever of existence, what a ferment of vitality! Opulence and misery, splendor and deformity, virtue and crime, innocence and corruption, age and infancy, strength and weakness, all mingle in discordant harmony.⁴ There the loud laugh drowns the aching sigh; here imprecations mingle with the voice of benediction; there the rich man riots in superfluous wealth; here the squalid child of poverty perishes with hunger. The monarch sits enthroned in his palace; the magistrate takes his place on the judgment seat; the criminal, crouching in his dungeon, awaits the hour of his doom; the bride arrays herself for the altar; the poverty-stricken mother sheds bitter tears over her pining little ones; vice spreads lures for the destruction of innocence; the gamester stakes his life upon a cast of the die. Love glows, avarice watches, ambition fires, revenge burns, labor toils, luxury riots. Soon the fever will subside, the tumult be hushed, the eventful drama be brought to a close. The myriads that crowd those thronged streets shall, one by one, be brought hither and laid in the dust, whose every particle will, ere long, be a fragment of mortality. The river of life which flows through those countless channels, is slowly and silently uniting its agitated currents, to lose itself forever in this vast reservoir of death! Such were the solemn reflections which stirred my spirit while gazing upon the magnificent prospect that stretches beneath and around Père Lachaise—

Speaking of death alone, beneath a clime
Where life and rapture flow in plenitude sublime.

Washington, D. C.

J. L. M.

TO ———.

Being lines written in her Album, the title page of which was inscribed "A book of Flowers and Poetry."

And such thy graceful idleness!—Since last
We met, this book of varied flowers hath grown
Beneath thy magic pencil. Nature's gems,
In many a tasteful wreath, are imaged forth
With all their brilliant loveliness;—I gaze
Upon the rare and bright conceptions which
Have vied in doing justice to their types,
And see in all the beauties glowing there
Fit emblems of thy gentleness and truth.
I seek no strained analogies;—I take
No definitions from the hackneyed books
That youthful misses dream on dotingly,
And say, that this means Hope—the other, Love—
A third bud Constancy—Beauty a fourth—
And so, till all the floral jewelry
Of nature be exhausted. Such task for those
Who deal in trite, unmeaning common-places!—
Yet if you wish to have an emblem here,
Be it of thee;—and view in all the rare
Similitudes of beauty pictured forth—
Grace unadorned, and native modesty—
That as by spring showers and the sunbeams bright,

* *Discors Concordia.*—Ovid.

These denizens of nature have had birth,
In fragrance and in simple elegance,
So have the virtues of thy guileless mind
Been trained in grace by gentle influences;—
See in their purity and sweet adornment
A proper emblem of thy beauteous self!—
Ever as this thy recreations be!
Let the bland lessons from the natural world
Be teachers of your heart! Let music's spell
Waken the tender chords of sympathy,
And elevate the mind to noble thoughts!
And when you thus transcribe the living flowers,
Making them glow in freshness on your page,
Forget not Him, who gave the Lily grace,
The Violet perfume, and the Rose its charms;
Forget not Him who formed thy gentle heart
To understand—to feel—to love—to praise;—
And should, amid the throng of holier thoughts,
Some earthly memories steal upon your sense,
I would you think of him who penned these simple lines.

NEW WORKS.

Viator; or a Peep into my Note Book. By the author of *A Grumbler's 'Miscellaneous Thoughts,'* &c. New York; S. Colman—1839.

It is with extreme pleasure that we notice another literary work, from the pen of the gifted author of Hoffman's "Legal Outlines," and "Course of Legal Study."

It is already well known, that this gentleman has made his bow to the literary public, by the issue of "*A Grumbler's Miscellaneous Thoughts*;" a work which it is not our present purpose to speak of; but which, it may be said in passing, has made morality lovely—drawn knowledge from her hiding place, and reduced wisdom to apophthegms.

Viator, or a Peep into my Note Book, is a volume which is vastly more meritorious in its pages, than pretending in its title. It consists of notes on miscellaneous subjects, and deals sometimes in fact, sometimes in fiction—sometimes in didactic reflection, sometimes in fanciful conceit—has here a touching incident, and there a reminiscence of *verfu*—a graceful description in this chapter, and a metaphysical disquisition in that. It is one of the few books which, touching on many subjects, is successful in all. For in the hands of Mr. Hoffman, whatever the theme,

"Whether reason or fancy, the gay or the grave,"

the interest is undivided, and the charm unbroken; and so much are we delighted with its perusal, that not until it is laid aside, do we discover how greatly we have been instructed. The inexhaustible fullness of Mr. Hoffman's mind, his stores of knowledge, and "wisdom hived with many a studious year"—are here familiarly and beautifully seen, and gem his teeming page, with sparkling thoughts, instructive allusions, and felicitous illustrations.

The world is becoming more liberal, as it becomes more enlightened, and is manifesting every day, a greater willingness to admit, what hitherto has with jealousy and reluctance been conceded—that to possess rare qualities of one kind, is no bar to the possession of qualities equally rare, of a different kind.

To the meed of this praise, no one can lay higher

claim than the distinguished subject of the present notice. For almost in the midst of his legal lucubrations, and at a time when the reputation of the jurist seems at its height, the public is presented with the present, and former volume, from which it appears that, whilst learning is still faithful to her favorite, the muses also have wooed his acquaintance. The mantle of the poet is cast gracefully upon the shoulders of the sage; and erudition, relieved of its nakedness, is warmed into new and glowing life, by the soul-giving fervor of imagination. Who to read the following highly wrought and poetical passage, would ever suppose that its author had been as devotedly affianced to the "Lady Common Law," as was ever Sir Edward Coke himself, the solemn godfather, and apostolical propounder of her doctrines! p. 168.

"How many latent and refined beauties—discoverable alone to the eye of taste—are spread over this land [Italy] of the clear blue empyrean; over this land of mountain snows and flowery vales; this land of the vine, the orange, the fig, and the olive! How much is the soul excited in this dominion of lavas and of subterranean fires, in this land of ancient ruins and of modern luxury, of priestly superstitions, and of classical and moral associations—the land of painters, of poets, of musicians, of architects, and of sculptors; the land of the witcheries of fancy, and the sublimities of varied genius; a land full of cascades, of grottoes, of the reminiscences of sybils, of dryads, and of nymphs; the region of the 'fell Charybdis and the howling Scylla'; a land where the sunbeams repose on the distant hills, reflecting their varied and gorgeous lights from the windows of a thousand habitations, fantastically perched on almost inaccessible cliffs, and where the twilight lingers on among the green valleys, as if reluctant to part with so much beauty, or to cloud them in the shades of night!

'Fair Italy,

Thou art the garden of the world, the home
Of all Art-yields, and Nature can decree,
Even in thy desert what is like to thee?
Thy very weeds are beautiful, thy waste
More rich than other clime's fertility;
Thy wreck of glory, and thy ruin graced
With an immaculate charm which cannot be defaced.'"

Or the following upon the same subject, to which the author clings with all the affectionate admiration and sorrowing sympathy of a poet. p. 41.

"All who have visited that country must, I think, have experienced the like alternations of feeling—for beauty and deformity; wealth and poverty; magnificence and meanness; adoration and profanity; piety and superstition; ignorance and learning; cleanliness and beastiality; genial sunny skies and gloomy chilling blasts; lovely women and loathsome hags, are all more strangely blended, and more frequently witnessed there, than, perhaps, in any other land!

"Italy is truly a country greatly blessed of God, and cursed of man; one to be loved and hated; sought and avoided; praised and blamed; a country that all must desire to visit, few to live and die in; a land of numerous reminiscences, quite as full of pain, as of pleasure; a land where civilized man was never greater, and yet where civilized man was never more debased; a land, in fine, where may be culled all that ennobles, and all that dishonors our species!"

But to the fine taste, and graceful fancy, thus beautifully disclosed, is superadded, whenever the subject admits of it, a fullness, a faithfulness, and a warmth, in his descriptions of material nature, which make it plainly apparent that only the attempt is wanting, to enable him to rival with his own, the productions of even the immortal Sir Walter himself.

Where one is disposed to quote a great deal, it is a hard thing to select a little; but we will not refuse our readers a partial gratification, because the space allot-

ted to us interferes with our kind wishes in his behalf to make it complete. The description and reflections which follow, are taken from the note entitled "Public Cemeteries," the result of a visit by the author to Laurel Hill Cemetery, in the vicinity of Philadelphia. p. 184.

"Not all the marble magnificence of the proud city in whose environs it is situate—her Banks and her Exchanges, nor yet the splendor of her ornate Churches, nor yet those monuments of her benevolence, her Colleges, and her Hospitals, nor her far-famed Water-works, could fill my mind with half the admiration, or enlarge my soul with a tythe of the salutary train of thoughts, as the moral beauty, the classic embellishments, and the sacred purposes of this delightful Repository of the Dead! This spot is forever dedicated to the uses of a public Cemetery, in which are to repose the wise, the good and the powerful—and possibly the simple-headed, the mere worldling, the recluse, and the half-forgotten, who are living—to be born; and to die in this now powerful and growing metropolis. It consists of an enclosed space of about thirty acres, comprising every variety of scenery, elevated in situation, and, in all respects of a proper soil. It is distant some three miles from the city, upon a wide avenue, known as the Ridge road; and in approaching it the visitor passes the Girard College, and, by a slight deflection may stop at Fairmount, the Prison, &c. &c.

"The entrance to the cemetery is by an arched portal, passing through a building of great architectural beauty, and which at once strikes the beholder as peculiarly appropriate in style and embellishment. In the front it presents an imposing colonnade of eight columns of the Roman Doric order, surmounted by a correspondent entablature; this, again, supports a balustrade, and the whole is finished by placing immediately over the gateway a funeral urn, appropriate in its design, and beautiful as an ornament. In the portico, upon each side of the gateway, is a niche for the reception of emblematic statuary, and the whole effect of the entrance-building is made still more grand and imposing, by a continuation upon each flank of a series of lesser columns, forming a colonnade in the same general style as the building itself, and which apparently much magnifies its extent. Once inducted through this chaste and imposing portal, and pursuing his walk but a few steps, the visitor finds himself in the midst of a scene of surpassing natural beauty. Lawns of velvet turf, gravel walks stretching off every where, seemingly into the entanglements of a labyrinth; deep and impenetrable shades from lofty oaks; the tristful grace of bending willows; the perfumes of many flowers; and the melody of birds, all unite in forming a scene as truly delightful to the senses, as it is genial to those sweet tempers of the mind, which are so apt to manifest themselves in these abodes of the lamented and honored dead.

"Upon the west side of the enclosure the scene becomes indescribably beautiful. The spectator approaches over grounds nearly level, until he stands upon a bank whose precipitous sides are covered with massive rocks, time worn and moss-grown; whilst, here and there, are seen some hardy evergreens which have thrust their roots within the clefts, and drawing thence their slender sustenance, expand above in shady trees, or in more humble shrubs. Here the kalmia delights to expand its showy blossoms, and the hemlocks, pines and spruces blend their foliages with the broader leaves of numerous other trees—whilst every little tuft of earth hanging loosely on the rocks, is garnished with flowers of various hues.

"At the foot of the precipice glides the placid Schuylkill, here widened to the dimensions of a lake, whose unruffled bosom sends back to the eye of the beholder, the reflected image of the beauties which encompass him. The whole is expressive of deep repose, rather heightened than dispoiled, by the distant view of commercial activity on the opposite banks, where the passage to and fro of the canal boats gives animation to the landscapes, whilst intervening distance lends enchantment to the view, by taking from the busy stir its noise and grossness. It is this rocky hill side with its trees, its shubbery, its numerous flowers, vines and tendrils—all of nature's own planting, that to me was the most enchanting—there, on a tiny peninsula, jutting somewhat into the river, I mused for a while, and thought that even a grave, nestled in so recluse a spot, had many charms: this, of all the rest, seemed to me the most attractive for a burial place; and indeed the whole hill-side seems

destined, at no remote day, to be the favorite spot—and, like the banks of the Nile, will spread its monuments and tombs from the water's edge to the very summits of these rocks."

But it is the rare and peculiar merit of the observant and philosophical author of *Viator*, to have adapted his writings with singular felicity to the taste of the reading public; for, the rage for novelty, so characteristic of the age, has affected the reading world in common with others. And with this trait Mr. Hoffman shows himself to be well aware. For whilst it is plain that he is determined to instruct, it is at the same time equally apparent that, he is constantly and carefully conscious, how important, and even necessary, it is that he should please. The result is that his volume abounds with such a judicious and wholesome variety, that the interest is maintained even about subtle points of criticism, or cunning speculation; and the reader pursues his employment with pleasure, and is made wiser without being weary.

Commending *Viator* once more to the reader, and hoping that the present brief introduction may induce him to prosecute further the acquaintance of its author, we respectfully give him good bye.

The Poets of America, illustrated by one of her Painters. New York: S. Colman. 1839.

We commend the custom, which is prevailing to some extent, of republishing productions of merit in the form of gift-books or annuals. It is a splendid mode of enshrining the works of genius and of giving them a circulation which, in many instances perhaps, despite their intrinsic excellence, they never would have obtained. There should be something beside tinsel and beauty and articles "got up" for the occasion, to recommend the Tokens and Souvenirs of the season. The *utile* should be blended with the "*dulci*;" at least, the elegance of binding, and the splendor of paper, print and engraving, should be combined with productions really meritorious and worthy of preservation. While we are willing to acknowledge that our annuals probably contain many pieces of this kind, and while we have no particular objection to seeing them, from year to year, issuing from the press, yet we think that standard and well-known works will afford a more ample and suitable opportunity for the display of taste and talent in the style, binding, illustrations, &c., than any that can be framed and moulded expressly for that purpose.

We have before us a combination of this kind—a union of taste and genius—a cluster of rich *intellectual* gems set in a splendid *material* casket. "*The Poets of America*," is a book beautiful and unique enough to be an importation from fairy land. Nay, were it not for its name, we should be uncertain now, whether it has not come to cheer an idle hour of dark November days, or amid the bleak winter, from the realm of bright winged genii, where the dreams of poesy are embodied, where the waters gush out beneath blue skies from fountains of crystal, and the trees drop pearls entwined with "dark and glossy leaves." But it is enstamped with our country's own proud armorial bearings, and is lettered with a title which thrills a peculiar nerve of the heart. "*The Poets of America*!" She has her poets. There blooms many a flower in her green free woodlands, and many a gem sparkles by her rushing waters. And what land is there, on all this broad earth, where

the spirit of poetry should kindle so naturally as in our own

"Land of the forest and the rock,
Of dark blue lake and mighty river"?

The lyre hangs shattered amid the desolate temples of Greece, and gray ruin has defaced column, shaft and architrave, in Rome; and where now, we ask, should poetry so naturally flow forth and become classic, as in this land where *mind is free*—where the shrines of her inspiration are the unpolluted and majestic monuments of nature, the streams that mirror heaven and its stars, the sweet, fair vallies, the eternal mountains and the rainbow-girdled cataracts? And we have produced poetry, if not of the highest order, yet of so much excellence in a brief lapse of time, that we are proud of it, and will if we go on thus, anon, have green trophies won in the fields of literature, to hang beside "the bruised arms" and the memorial marbles that are piled above the bones of our ancestors.

But we have touched upon a lofty theme, and have thus been led to indulge in a strain of remark upon which we cannot dwell, and to which, perhaps, we should not in this place have diverged. We commend the book before us to the patronage of our countrymen. In point of elegance it is well fitted to adorn a centre table, or grace a boudoir; while, containing specimens of the productions of Drake, Halleck, Sprague, Bryant, Percival, Benjamin, Sigourney, Gould, and a host of others, each in himself a host, it will form a noble addition to the library of taste and intellect. It, by no means, contains all the flowers of American poesy. We assure the reader, in the words of the editor, that "ample materials, untouched in the present work, are at hand," and we sincerely hope, with him, that "an opportunity of presenting specimens from the pens of many writers not represented in the present collection," will soon occur. He promises us, "should the reception of this volume be such as may reasonably be anticipated," "to issue another similar in character and style." We trust that his reasonable anticipations will not be disappointed.

It would be superfluous for us to enter into special criticisms here. At least whether it would be so or not, we do not intend to do so. The poems are generally, we presume, well known and well liked. Well known and well liked as they are, however, we must transfer one or two to our columns, and we wish that we could transfer, with those we select, the beautiful etchings with which they are intermingled and surrounded in the work from which we copy them.

Here is Willis's Annoyer; or Love's "*jottings*" up and down in ocean, earth and air.

Love knoweth every form of air,
And every shape of earth,
And comes, unbidden, everywhere,
Like thought's mysterious birth.
The moonlit sea and the sunset sky
Are written with Love's words,
And you hear his voice unceasingly,
Like song in the time of birds.

He peeps into the warrior's heart,
From the tip of a stooping plume,
And the serried spears and the many men
May not deny him room.
He'll come to his tent in the weary night,
And be busy in his dream;

And he'll float to his eye in the morning light,
Like a fay on a silver beam.
He hears the sound of the hunter's gun,
And rides on the echo back,
And sighs, in his ear like a stirring leaf,
And flits in his woodland track.
The shade of the wood and the sheen of the river,
The cloud, and the open sky—
He will haunt them all with his subtle quiver,
Like the light of your very eye.
The fisher hangs over the leaning boat,
And ponders the silver sea,
For Love is under the surface hid,
And a spell of thoughts has he.
He heaves the wave like a bosom sweet,
And speaks in the ripple low,
Till the bait is gone from the crafty line,
And the hook hangs bare below.
He blurs the print of the scholar's book,
And intrudes in the maiden's prayer:
And profanes the cell of the holy man,
In the shape of a lady fair.
In the darkest night, and the bright day-light,
In earth, and sea, and sky,
In every home of the human thought,
Will Love be lurking nigh.

Here is one by Pierpont, sweet, indeed, as "the silvery tones of a fairy's shell."

PASSING AWAY—A DREAM.

Was it the chime of a tiny bell,
That came so sweet to my dreaming ear,—
Like the silvery tones of a fairy's shell
That he winds on the beech, so mellow and clear,
When the winds and the waves lie together asleep,
And the Moon and the Fairy are watching the deep,
She dispensing her silvery light,
And he, his notes as silvery quite,
While the boatman listens and ships his oar,
To catch the music that comes from the shore?—
Hark! the notes on my ear that play,
Are set to words:—as they float, they say,
"Passing away! passing away!"

But no; it was not a fairy's shell,
Blown on the beach, so mellow and clear;
Nor was it the tongue of a silver bell,
Striking the hour, that filled my ear,
As I lay in my dream; yet was it a chime
That told of the flow of the stream of time,
For a beautiful clock from the ceiling hung,
And a plump little girl for a pendulum swung,
(As you've sometimes seen, in a little ring
That hangs in his cage, a Canary bird swing,)
And she held to her bosom a budding bouquet,
And, as she enjoyed it, she seemed to say,
"Passing away! passing away!"

O, how bright were the wheels, that told
Of the lapse of time as they moved round slow!
And the hands, as they swept o'er the dial of gold,
Seemed to point to the girl below.
And lo! she had changed:—in a few short hours,
Her bouquet had become a garland of flowers,
That she held in her outstretched hands and flung
This way and that, as she, dancing, swung
In the fulness of grace and of womanly pride,
That told me she soon was to be a bride;
Yet then, when expecting her happiest day,
In the same sweet voice I heard her say,
"Passing away! passing away!"

While I gazed at that fair one's cheek, a shade
Of thought, or care, stole softly over,
Like that by a cloud in a summer's day made,
Looking down on a field of blossoming clover.
The rose yet lay on her cheek, but its flush

Had something lost of its brilliant blush;
And the light in her eye, and the light on the wheels
That marched so calmly round above her,
Was a little dimmed,—as when evening steals
Upon Noon's hot face. Yet one could but love her,
For she looked like a mother whose first babe lay,
Rocked on her breast, as she swung all day;—
And she seemed, in the same silver tone to say,
"Passing away! passing away!"

While yet I looked, what a change there came!
Her eye was quenched, and her cheek was wan:
Stooping and staffed was her withered frame,
Yet, just as busily, swung she on;
The garland beneath her had fallen to dust;
The wheels above her were eaten with rust.
The hands, that over the dial swept,
Grew crooked and tarnished, but on they kept,
And still there came that silver tone
From the shrivelled lips of the toothless crone,—
(Let me never forget till my dying day
The tone or the burden of her lay,—)
"Passing away! passing away!"

The Literary Souvenir—A Christmas and New Year's Present
for 1840—Philadelphia; E. L. Carey & A. Hart.

This annual is, we believe, composed entirely of articles from the pens of W. E. Burton and Charles West Thompson, Esq's. We have read a portion of its contents and glanced at the engravings. Some of the latter are old acquaintances. "The Water Nymph," by Forrest, from Sully, forms the beautiful vignette of the work. The poetical department is supplied by Mr. Thompson, the prose by the editor. "The old Dutchman and his Long Box," is a humorous description of the adventures of an old Hollander in this new world in search of "Aamsdertaam," which he finally discovers on the banks of the Erie Canal.

"A Rummage in my Old Bureau," is an interesting article, containing the reminiscences of a Nonogeanian.

"The Canal Boat," gives a ludicrous representation of the varied scenes and manifold miseries incident to one of those almost obsolete modes of conveyance.

"A Peep at Midnight from a College Window," presents us with a group of the ghosts of some of earth's illustrious, who "revisit the glimpses of the moon," and meet, in a curious medley, in their old retreats on the banks of the classic Cam.

The longest tale in the book—"The Aeronaut's Revenge"—we have not read; and, indeed, this is intended and will be received as a hurried and passing notice, not entitled to the name or consideration of a critique.

Phantasmion—two vols. New York—S. Colman--1839.

We have received a copy of this work. It is a tale of *faery*, said to have been written by Mrs. Henry Nelson Coleridge, only daughter of the poet. The introduction to the American edition, is by Grenville Mellen. We have read but a portion of *Phantasmion*, and are not prepared to criticise; but we presume that those who like, occasionally, to leave the dusty and beaten track of every-day life and to forget, for a while, the evils of "pressure" and "suspension," by roaming through the dominions of Oberon and Titania and communing with bright and airy fancies, will be gratified by a perusal.

It comes from the press in a neat style, and forms a part of Colman's Library of Romance.

VOL. V.

RICHMOND, DECEMBER, 1839.

NO. XII.

TO A FRIEND ON HIS MARRIAGE.

BY PARK BENJAMIN.

'Tis said that marriage is a lottery—
And if the simile be true as wise,
My friend, how happy must that lover be,
Who, ere the drawing, knows he'll win a prize!

A prize indeed! richer than Ophir's gold!
A virtuous woman of more real worth
Than rubies—or the hidden wealth untold
In ocean caverns or deep mines of Earth.

Oh, guard the treasure with a miser's care,
And lock it safely in your inmost heart;
Then will it keep its present lustre fair,
And of your very soul become a part.

Like vine and tree, may you together grow,
Close intertwined—unheeding of the blast,
While your affections unestranged shall glow,
And Truth, and Faith, and Constancy shall last!

A LEGEND OF THE MOUNTAIN OF THE BURNING STONE;

A STORY OF THE FIRST MONTEZUMA.

By the author of "Lafue," "Captain Kid," &c.

IN TWO PARTS.

PART THE FIRST.

I.

In the centre of the present empire of Mexico, and within the borders of the beautiful country once inhabited by the ancestors of those wild and splendid savages, the Comanches, lies a chain of elevated mountains whose snowy peaks pierce the skies, leaving the vast fields of clouds floating midway between them and the plains. Towards the south, they make a majestic curve and enclose within their embrace a circle twelve leagues in diameter, in the midst of which sleeps like a fair garden the valley of Alcolo (itself enclosed by a lake) and the loveliest gem on the breast of earth. One of these mountains is loftier than the rest, and on its summit burns a star-like blaze, which is said to be a single diamond, but inaccessible to human reach. This peak is hence called the 'Mountain of the Burning Stone.' By day, the shining apex glows with all the dyes of the rainbow; at night its light is like pale moonshine.

At the time of our story this valley was the centre of an empire now no more. Here was the palace and throne of the emperors, and the centre of wealth, power and magnificence. In its midst rose a proud city, gorgeous with swelling domes, needle-like pinnacles and

majestic towers, through which, dividing it into two parts, flowed a stately river which, for more than a league, reflected from either shore, on its silver bosom, two continuous lines of temples, palaces and edifices of costly grandeur.

On the throne of this glorious empire sat ULYD, the last monarch of his race. He was haughty, imperious and cruel. His foot rested upon the necks of his subjects, and his sceptre was converted into a sword, which hourly drank human blood. But Eylla, the only daughter of Ulyd, was gentle as the dove in spirit; as beautiful as Lyn, the Angel of the Flowers, and graceful as the antelope that runs upon the mountains. The tyrant loved his daughter, and that love was all that humanized his nature.

II.

In one of the lesser streets of this gorgeous capital lived a poor net-maker, whose sole merit was his honesty, and whose only income was the daily pittance earned by the toil of his hands. He was a widower; but Heaven had tempered its judgments with mercy, and left him a son to share his labors and solace his old age. Montezuma, the name of this youth, was now twenty years of age. His stature was lofty and his port noble; while grace and beauty were stamped upon his face and person. His dignity was that of virtue; his beauty that of a gentle temper and cheerful heart. He was beloved and idolised by all of his rank, doated on by his father, and despised, so closely had nature allied him to them, by the nobles. Such was Montezuma, at the period of our story.

III.

"Stand aside, serf!" were the stern tones of an officer, addressed to a youth who, with a thousand others was watching the procession of the emperor, his nobles and the priests of the Sun on their way to offer sacrifices at each gate of the city, to propitiate the wrath of their deity—for, rain had not fallen on the earth in the space of four months, and the fierce sun had burned up the harvests. The eyes of this youth seemed to be fixed more particularly on the princess Eylla, than on the spectacle.

"Stand aside, serf!" and a glittering spear-point at the same instant pricked the breast of the youth, who caught it in his hand, and ere it could penetrate, wrested it from the noble's grasp, broke it in twain, and cast the pieces disdainfully at his feet.

"Ha! 'tis the slave Montezuma!" cried the infuriated officer. "He has mocked us full long. Cut him down!"

But ere the guard which were about the emperor and his daughter, and which the officer commanded, could obey this command, the crowd opened to the right and left and received the destined victim into their bosom.

"How your way to him!" cried the noble. "Cut the slaves in pieces!"

"Nay, my sire, will you let blood be spilled on this sacred time?" plead the sweet and earnest voice of the

princess Eylla, who, riding in the chariot beside the emperor, had witnessed this scene.

"They are my slaves, and 'tis in their blood that I float above their heads," was the stern reply of the tyrant.

"Nay, father!"

"Let them die! saw you not that the serf rebelled?"

"Nay, he did but protect his life."

"And wherefore should he dare save his life, when my officer of the guard was pleased to take it?"

"Nay—father! see how the poor people fall before the weapons of the fierce guards. And look! they press up to fill the gap, and with their hearts place a barrier between thy vengeance and its victim!"

"Therefore should they die!"

"Spare him—spare them—father, for my sake bid them hold! Shall Eylla plead in vain?"

"Azcala, call off your guards. Their insolence is enough punished."

The lovely princess fell upon his neck and gratefully kissed him, and with strange affection he returned it, and then sternly bade the procession move on. But Eylla—for, curiosity to gaze on a man for whom so many had given their lives, had led her to seek him out in the crowd—did not pass on, ere she received from the dark eyes of the handsome youth a look of grateful homage and acknowledgment—for, the gentleness of the princess drew her as near to the hearts of her subjects as the sternness of her father removed him from them—so Montezuma felt it was no insult for his gaze, low as he was, to meet that of the princess, and to thank her for her interposition. But the mischief that glance did is incalculable. The princess rode on, but from that moment forgot the procession—her father—every thing but the face of the youth for whom she had interposed. Her bosom at first was filled with curiosity to know who he could be for whom men cast away their lives; and then her thoughts ran upon his lofty aspect and noble bearing—dwelt upon his fine eyes and beautiful features. But the more she thought, the more bewildered she grew, till at length recalled to herself by the approach of the procession at the temple, she hung her head in confusion, and concealed the blush of shame that crimsoned her cheek within the silken folds of her vesture.

IV.

That night the lovely princess Eylla sat in her gorgeous chamber. Her slaves, in rich dresses, kneeled at a distance with their folded hands laid across their bosoms, silently watching the least sign of her will or gesture of command. It was moonlight, and the silvery flood poured in at the open lattice by which she sat, and falling upon her fair forehead gave it the whiteness of Parian marble, with the soft lustre of the pearl. One snowy hand, half in the moonlight, half in shade, sustained her cheek. She was buried in deep thought, and ever and anon, her snowy bosom would heave and fall, and from her just parted lips a low sigh escape. All at once, she rose to her feet, and at the same instant her slaves flew and prostrated themselves around her.

"Ophiël, remain with me; the rest of you retire to your couches. I need your attendance no longer, till the dawn."

Slowly, with their faces turned towards her, the sub-

missive slaves retired—and the princess was left alone with her confidante.

"Ophiël!"

"Your highness," answered the lovely Peruvian slave, still kneeling at the feet of her mistress.

"You have heard that several men were slain to day, as we passed through the city towards the temple?"

"Nay, your highness, I did not. But as scarce a day goes by without bloodshed, I doubt not this day has had its share," replied the slave, with a mixture of irony and sorrow in her manner.

"Hist, minion. It is my father's unhappy disposition. Yet he loves me."

"So does the lion of Peru; yes, the tiger of the Yucatan loves his whelp."

"Have done, Ophiël," said the princess, with some sternness. She then added with kindness, "I have detained thee to serve me with thy ready wits and well-tried faithfulness. Listen!"

The slave bent her head reverently and gratefully upon her bosom, and silently awaited the communication of the will of her mistress.

"There was some commotion to-day among the populace, caused by an attempt of the officer of the emperor's guard to seize a youth who inadvertently, and from too eager curiosity to witness the procession, thrust himself forward before the others. I heard him called Montezuma. Know you such a one by name in the city, and his degree?"

"Was he tall and kingly in his port, your highness?"

"He looked majesty himself. Such, methinks, as a prince of the sun should appear!"

"Was he youthful withal?"

"Scarce the dawn had darkened his lip, and the scissors had never yet touched his flowing locks of jet."

"Did he smile like the sun in May; and was his eye like a diamond set in jet upon a ground of pearl, flashing fire and speaking intelligence?"

"The same, Ophiël. Thou hast seen him, maiden!"

"Was he haughty, yet his haughtiness blent with the modesty, lessening his degree, and while he looked, if he looked on thee, did his eyes, while they gazed, seem to plead thy forgiveness for the deed as they committed it?"

"Thou hast painted him to the very semblance, chit," said the princess, laughing and blushing, as she detected a smile lurking in the dimpled mouth of her confidante.

After taking one or two turns through the apartment, she stopped and turned to the fair Peruvian, in whose cast down, yet knowing look, she detected the knowledge of what she had not yet dared to confess to herself. "Ophiël," said she, "be faithful and secret. Seek out this Montezuma. I would see a youth for whom men so freely cast away their lives, as I have this day seen them do."

"Your highness, he is a net-maker's son."

"The better still. If he be not princely born, it were better he were at the other end of the degree. Go—I would see him. Use what other instruments thou wilt to aid thee. But be speedy, discreet, and both cunning and wise as the fabled Anaconda of thy own land!"

The slave prostrated herself at the feet of her mistress; then rising, reverently kissed her hand and glided from the chamber; while the lovely Eylla, her virgin bosom

tortured and bewildered by a thousand new and strange thoughts, yet all pleasing, re-seated herself in the window and gazed vacantly upon a range of gardens, villas, fountains, towers and domes, all mingled in gorgeous confusion, and lying like a magic scene beneath the radiance of the moon, which flooded all with a light so mellow that the whole seemed to be seen through a sea of transparent silver.

V.

In the door of a lowly hut of reeds and mats, in a remote quarter of the capital, sat an aged man mending nets by the light of the moon; the beams of which rested like snow-flakes on his white head. Suddenly a shadow passed between him and his light, and he looked up.

"Welcome, Montezuma, my child. I have beguiled the hours waiting thy coming, by putting a stitch, as well as my old eyes will let me, here and there in the net. You are pale."

"I have need to be pale, sir," said the youth, casting himself upon a settle beside the door. "He who carries the ruddy cheek of a careless heart, at this time, loves not his country, and has no manhood. We are a nation of slaves, father—but light has broke in upon us. The tyrant shall die, and man's blood shall no longer be counted water!"

"Hush, boy," said the old man, lifting his shaking finger.

"There has blood been spilled this day, and were it not that the tyrant was the father of the fair princess Eylla, I would slay the slayer with my own hand."

"Hush, son—my child, silence! Speak not such words! speak not so loud! Ere this thy words have been caught up, and swift wings are bearing them to the emperor's ears. What aileth thee?"

"I have whispered rebellion," continued the young man, heedless of his father's words, "in the willing ears of thirty thousand of my fellow slaves—"

"Son, son—see, we are not alone—He wears the emperor's livery. Thou art lost—lost—lost! Did I not bid thee keep silence?" And the parent flung himself distractedly on the neck of his son.

The young man rose quickly, as he saw a stranger approach the hovel, and placed his hand in his bosom. But without making further demonstrations of preparation for a hostile meeting, he proudly and calmly awaited him.

"Is this the abode of Melef, the net-maker?" demanded the stranger, haughtily addressing the old man.

"It is; what would you with my father?" replied the young man.

"Then thou art Montezuma, his son. I have an order to guide thee to the palace."

"Lead on. I am ready to die—for my blood will turn to fire and kindle a flame that the tyrant's blood can alone extinguish!"

"Ha, this is language!"

"Plain enough for a courtier's ear. Farewell, father."

"Nay, thou shalt not die—stay—stay—oh, my son—my—my son!"

"Farewell, old man!" he said feelingly as he laid the fainting form of his parent on the settle he had himself just occupied. "Now sir, lead on to the emperor!"

VI.

The moon rode high towards midnight, scarce touching with its nearly vertical beams the outer verge of the window in the apartment of the princess, when the door opened, and the slave Ophiël softly entered and stole to the feet of her mistress.

"Well, Ophiël!"

"He is without."

"Who went for him?"

"Ical."

"Thy lover."

The slave blushed and hung her head.

"What said he when bidden?"

"That he would obey the emperor's commands, and spoke some other words of fearful import."

"Tis well. I would that he, as well as the messenger, should think 'tis by my father's commands. Admit him."

The princess arranged her robes in more graceful folds, and with an air of mingled majesty and condescension, prepared to receive the young man, as the slave ushered him into her presence. As he entered, his port was haughty, and his eye flashed round defiance, as he seemed to seek out the person of the emperor. But the lovely form of the princess meeting, instead, his glance, his whole bearing changed; the eye lost its fire, and assumed a softer light; the lip its curl; and the aspect and port of defiance was converted into one of devotion and gentleness; and he kneeled reverently before her, with his hands on his breast. The princess marked the instant change, and a blush of pleasure increased her loveliness.

"Thou art called Montezuma, the son of Melef the net-maker?"

"I am the low-born slave thou hast named, lovely princess," he answered, with as much of proud scorn as the presence of his royal mistress would permit him to assume. This expression of feeling did not escape her notice.

"Methinks, thou wert the cause of a certain tumult in the streets to day?"

"Noble princess, in as much as you judge me to have done wrong, I confess my error. But neither I, nor they who died to protect my poor life, have done wrong against the tyrant. Forgive me, lady—I had forgotten, looking on thy gentle face, thou wert his daughter. But if I offend, thou hast only to order me to the block—and death from thy hand were better than life, with thy father's foot upon my neck."

"You are over-hasty, Montezuma. I would ask thee, how thou, so young, and of your degree, hast gained such influence over the souls of men? Who would die thus for the emperor? None."

"It is because I am a man."

"Ha! this to the daughter."

"Pardon. It should have been said to the sire."

"Thy spirit is too quick. It becomes not thy station. If my father has injured thee, let me atone. What can I do for thee?"

"Nay, speak not to me so gently—I cannot bear it;" and burying his face in his hands, he was for a moment overcome with emotion. The princess was affected and was also silent.

"Forgive my weakness, your highness—but it is past now. Your gentleness to me, has saved your father's kingdom, and perhaps his life."

"Speak, quickly—what mean you?"

"I will confess all, and then die, knowing that I have not struck the blow that should make you wretched."

He looked inquiringly at the slave, and then at the princess, and was silent.

"Ophiël, wait in the ante-room." The princess and the young conspirator were left alone. He then unfolded to her the whole conspiracy, which has been hinted at, and explained minutely its past progress and present state, and its ultimate aim. She listened with mingled surprise, terror and admiration.

The moon began to pour its fading light into the western window of the room, ere the princess called the wondering Ophiël, and bade her see that the young man was reconducted in safety and secrecy to his abode.

In this interview, the princess detected her love for the youth, and to her pleased surprise discovered his for herself. Cupid is a true democrat. He knows no rank. The youth encouraged by the princess, and ready to stake all upon a cast, at length did boldly confess his daring passion, and then prepared his mind for death. But to his surprise and joy, the gentle and lovely woman, not only listened to him, but in her turn confessed her love. Here was a singular and wonderful spectacle to human eyes! a princess and a peasant vowing to each other, love undying, love unchanging, love eternal. Here had Love fully established the axiom, that "two extremes meet." He had magically brought together two noble spirits that Nature and Fortune had sundered widely. Well hath Maria del Occidente sung,

"Nature never formed a soul
Without its own peculiar mate."

PART THE SECOND.

I.

Three months passed away, and in the interim the lovers met frequently, and as the violets that grow in couples are sweetest scented, so sweeter and deeper grew their love by frequent mingling of their young hearts. In a politic female it would have been policy to have cherished the love of a handsome youth, whose word could arm fifty thousand men within the capital's walls; and in case of her coming to the throne, the most refined diplomacy, to have secured the safety of her empire by permitting so dangerous a person to share it. But Eylla was no politician, and knew nothing of diplomacy but that of the heart. At length a rumor reached the ears of the emperor, that at night the princess received stolen visits from a man in disguise, who seemed to have free ingress and egress from the palace at all hours between twilight and dawn. Montezuma was watched, and followed, and seen to enter the wing containing the apartments of the princess. Word was conveyed to the emperor, who soon after attended by his guards, unannounced, entered suddenly her room. The lovers were discovered—Montezuma, seated at the feet of his lovely mistress, attentively listening with upward gaze, while she was relating some interesting tale, her snowy fingers the while half hidden among his raven locks.

"Seize the traitorous slave!"

Eylla shrieked at the sound of his terrible voice, which gave the first intimation of his presence, and the

next instant, true to her love and her womanhood, threw herself between the soldiers and her lover.

"Back! Touch him not!"

"Seize him!" shouted the monarch, with vehemence.

"No—no—hold, I command!"

"Spear the hound!"

"Through my heart, then seek his."

The guards hesitated. She caught this moment to address the enraged emperor. "Father! listen. Bid the guards wait without the door. He cannot escape them, and hear me one word!"

The emperor gazed on her penetratingly a moment, and then waved his hand for the soldiers to withdraw. The three were left together. The monarch, restless as a caged tiger, pacing near the door—the young man standing silent, proud and calm before him.

"Now, traitress!"

"Nay, I am wanting nothing in my love or loyalty to my king and sire," she said, approaching and kneeling before him;—"Hear me, my father! You have once loved your Eylla! Have you forgotten how in infancy I sat upon your knee—and how, as I grew older, each morning I laid upon your pillow the sweetest flowers, nor left your couch until you had kissed me. And when I got to be a maiden grown, and thou wert sick, nigh unto death, how I watched thy couch and cooled thy brow, and did you not say I was a blessing to thee, and that you owed your life to my tender nursing?"

"My child—Eylla!"

"Thou art moved. I see returning love for thy only daughter in the gentler beaming of thy eye. Father, I know you love your own Eylla." As she spoke she softly rose, and like a child climbing its parent's knee, slid upwards into his arms, and laid her head confidently upon his breast.

"What would you, Eylla?" and his voice was affectionate, and he looked tenderly down upon her, and for the moment forgot the presence of the object of his late wrath.

"His life, father, and thy forgiveness!"

Her words recalled the emperor to himself. He flung her from him, yet still she clung to him as he strode up to the young man.

"Ha! methinks I have seen that face!"

"Thou hast, emperor."

"Who art thou?"

"Montezuma, the net-maker's son."

"Eylla, is it so? This slave—this serf, thy paramour?"

"My betrothed husband!"

"Princess Eylla, thou liest with thy false tongue!"

"I have spoken truth, father."

"Then your fates are linked. The deepest dungeon of the prison shall be your abode, till you get the better of this madness. But, by the bright sun, if I had a doubt, (yet I see not why I should not) of thy honor, I would slay thee, with my own hand, ere thy bosom heaved twice more."

"Father, for my life I care not—the dungeon does not terrify me. It is thy displeasure I feel. I am innocent!"

"I believe thee, for mine own honor's sake; for after this thy word hath little weight with me. Yet thou shalt not go unpunished. Ho! without there. Soldiers, two of you guard this woman to the keeper of my

palace prison. Entreat her gently, mind you, and bid the jailer on his life see that she suffer no roughness: for, if she be a prisoner, she is no less the daughter of your emperor. For you, sir, for whose crime I cannot find a name—I will invent for thee a death that shall in some degree measure it. Bear him off to the farthest-most dungeon beneath the river. If he escape, the lives of every soldier of my guard shall pay for his."

Without a word, calmly and dignified, with only sorrow at the princess' fate shading his countenance, the young man was led from the apartment to become the occupant of the dungeon.

II.

The imprisonment of the princess lasted but a few hours. The emperor, after the first excitement was past, felt the father return to his bosom, and sent for her to his presence. The result of this interview—to judge from the expression of the face of the princess when she met Ophiël—did not leave her quite destitute of hope.

"You are pardoned!" exclaimed the joyful slave, flying and throwing herself at her feet.

"He has forgiven me. I have told him all—the conspiracy and all."

"And what said he?"

"It made him more thoughtful than angry, and he asked many questions about him, then shook his head, walked the room and muttered. I could only hear by piece-meal, '*Of policy—no heir myself—the security of the empire—a noble bearing—better for my successor than a noble—I will think of it—she loves him too—his influence among the people—consolidate the empire.*' I could hear nothing consecutively."

"Mark me, my noble mistress—you will yet be happy!"

"I cannot tell you, Ophiël. He kissed me—"

"Who?"

"My father, minion—when I left him—but I trembled when I looked in his face and saw how dark his eyes were. He dares not slay him, for he knows he will slay his daughter with the same blow."

"What do you think will be done with him—that is, provided the emperor does not give him to you for a husband?"

"Silence, Ophiël, child! He *shall not die.*"

"And if they keep him in prison, woman's wits can get him out."

"As I left him, my father bade me meet him in council early on the morrow."

"I augur something from this."

"May it be of good," was the foreboding reply.

Thus speaking, the unhappy princess, accompanied by her attendants, retired to her apartment for the night.

III.

The ensuing day, in the imperial hall of justice, sat the emperor, sole judge and arbiter of every cause brought before this fearful tribunal. His word was the law—with him lay the power of life and death. He was enthroned in grandeur, commensurate with his high station, surrounded by his stately nobles and glittering court. A jewel of great size, of mingled hues, and dazzling as the sun, blazed on his crown. Before him, on a marble slab, elevated above the floor, stood his executioner, holding in his hand and resting upon it, a

gigantic sword, gleaming in every beam. On the right of the emperor and a step below him, on a throne of pearl inlaid with gold, sat the princess Eylla, pale and drooping, yet observant of all that passed. She was attended by a brilliant galaxy of the ladies of her court. The emperor was stern and silent, and though from time to time his daughter cast a glance furtively upwards to read his face, its expression foiled her interpretation. It afforded neither hope nor despair. The emperor now waved his hand—a trumpet sounded—and, loaded to the earth with chains, the youthful prisoner was brought into the presence of his judge. Without trial—without even naming the offence with which he was charged—the emperor, after gazing on him a moment, gave a parchment to one who stood at the foot of the throne, and bade him read it aloud. Instantly the trumpets sounded thrice—thrice a herald cried "Long live the emperor, the brother of the sun and governor of the universe!"—and thrice again the trumpets resounded.

"It is known to all the world that the present dazzling stone which adorns the imperial crown, was found more than one thousand years ago in the throat of a condor, which fell dead in the court of the palace. From the variety of its hues and its brilliancy, there remains no doubt that it was brought from the glittering peak of the Mountain of the Burning Stone. Every diamond having its mate, it has been the ambition of numerous emperors to obtain the mate to this; and it is estimated that more than a million of states' prisoners have perished in the course of ages, in endeavoring to purchase their forfeited lives, by reaching the summit. As yet no human foot has trod it, and the diamond is yet unobtained.

"Now, inasmuch as Montezuma, son of Melef the net-maker, has been adjudged a traitor, he is hereby condemned to be conveyed from hence, closely guarded and in chains, to the foot of the Mountain of the Burning Stone, and there released. If he ascend the mountain and return with the mate to this stone or a stone of its like, he shall not only be pardoned for his treason, but shall receive in marriage the princess Eylla, and succeed the emperor in the empire. If he refuse to go up or fail in the attempt, he shall die an ignominious death, by the axe of the executioner. Long live the emperor, just and wise."

Thrice the trumpets sounded, and amid the acclamations, murmurs of surprise and adulating shouts of the enslaved people, high above which rose the wild shriek of the princess, the emperor dissolved the assembled court and retired within the inner chambers of the palace.

IV.

Night had scarcely begun to veil the streets of the capital in gloom, ere the private postern that gave access to the quarter of the palace occupied by the princess Eylla was cautiously opened, and a female figure came forth with her mantilla closely drawn about her form and covering all her face, save one lively eye. But with all her care, each passer-by knew her to be Ophiël, the favorite slave of the princess. After surveying the ground about her, to see that she was unobserved, she hastily darted across the street into the shadow of a temple, and swiftly pursued her way through many windings and across many squares, until

she came to a dilapidated building, which had formerly been the abode of a minister of state, who, with his whole family, had been beheaded within its chambers for treason. It was now the abode of a sorceress, who, to many other marvellous sciences, added the knowledge of the secret virtues of all herbs, so that by her art and skill she could both convey death through the eye and restore life by a breath.

At the sunken portal of this dread abode, the female paused to look about her, and then with a hesitating, yet onward step, she entered beneath the arch, and crossed the deserted hall. At its extremity she came to a low door, at which, after hesitating an instant, she knocked. A stern voice bade her enter. Before her sat the woman she sought. In a few words Ophiël told her of the loves of the princess and of Montezuma, and of his sentence.

"Why do ye come hither, maiden?" demanded the sorceress sternly, after the slave had ended.

"For the aid of your art and wonderful knowledge. For, the princess Eylla, who has sent me hither, has heard that thou wert skilled in all the mysteries of creation, and that to thee are unfolded the hidden springs of life. She now asks the exercise of this power in her favor and that of the poor youth who will assuredly perish else. Canst thou do nothing for him, mother?"

"The princess Eylla is gentle, fair, and virtuous. She shall be obeyed. Wait my return."

The sorceress left the room by a door hitherto unseen, and Ophiël remained with her heart throbbing between hope and fear. In a few minutes the woman returned and placed in her hand a small sealed package, with these words:

"Place this in his hands, and leave the rest for his manhood and his lofty love to accomplish. Depart speedily as thou earnest."

Ere Ophiël could thank her or question her of the contents of the package, she was gone.

V.

The succeeding morning a band of a thousand soldiers marched out of the northern gate of the city; their numbers serving rather to add dignity to their mission, than as necessary to guard the chained prisoner, who moved with a proud step and unbroken bearing in their centre. The first night they encamped within a league of the mountain. The youth slept in his guarded tent, and his dreams were of love and ambition: for a stout heart like his and one that loved so truly did not despair of success, even where his path was over the footsteps of a million who had gone before him, and left their bones bleaching on the mountain side. At midnight his dreams of Eylla were disturbed by a slight touch on his shoulder. He started, opened his eyes, and beheld an indistinct figure gliding from the tent, without waking the tired and sleeping guards, who, doubtless, thought their prisoner's safety sufficiently secured by his heavy chains—he at the same moment discovered that something had been left in his hand. Instinctively he hastily concealed it in his bosom, and turning over with clanking chains, which roused his guardians, once more sank to slumber.

With the rising sun the camp was in motion, and under a select guard of one hundred men, the prisoner

was led to the foot of the mountain and divested of his chains. The captain of the guard then embraced him, for he had compassion on his youth and gentleness, and wishing him success, accompanied him a few paces on his way, and bade him farewell.

For the first two miles the ascent was comparatively easy. But at length the young man, of whom the soldiers never lost sight, reached the region of eternal snow, against which his dark form was but just relieved, appearing like a speck, which, save that they had continued to keep it in their eye, could not have been detected.

When the young Montezuma, after great hardship gained the region of eternal winter, the verge of which, far down the mountain, was artificially whitened with myriads of bleaching bones of those who had perished before him, but which made him no fainter hearted, he paused to survey the icy pyramid that pierced nearly a league higher into the skies, presenting to the eyes of those below one polished cone of glittering snow, crowned by the starry gem that had burned on its crest from the first day of creation. Notwithstanding the probable fatal end of the attempt, Montezuma, after gazing upward awhile and seeing many fissures in the sides of the glacier invisible to those below, resolved to make it. Lying down on the last spot of verdure to rest his weary limbs, he reposed for an hour, and then with a bold spirit and inspiring himself with the thought of Eylla he began to scale the icy steep. He had toiled two hours and won but a twentieth part of his way, when, as overcome by the cold and exertion, he was about to admit into his mind despairing doubts of success, a small package fell from his bosom, and after sliding down a hundred feet, lodged in a deep cleft of the glacier. It recalled to his recollection the mysterious visit of the preceding night, which, until now, had not entered his mind; and he rapidly descended to recover it. On opening it he found a transparent substance like gum, of a delightful fragrance, enclosed in parchment, on which was written these words:

"The gum of the herb that containeth the principle of life. Eat sparingly at morning, noon and eve, and thy strength shall be as the sun, and neither the four elements nor the two great principles of heat and cold shall have power over thee. Child of the sun, run thy race, and rejoice in thy strength."

The weary young man, ready to sink under fatigue and cold, and hitherto just about to give up the further ascent in despair, placed a small particle of the gum between his lips. It instantly dissolved, and suddenly he felt a new principle of life. The stagnant blood warmed and glowed in his stiffening veins; his heart leaped; his sinews became strong; his spirits cheerful and full of elasticity; and hope and anticipated victory once more filled his soul. He was a new being. He felt the strength of an immortal, and the enduring power of the tireless sun. His first impulse was to spread his hands in gratitude to this visible dispenser of life and heat, who was at that moment descending the western horizon to light unknown realms beyond its verge. Then carefully placing the remainder of the gum in his vesture, he sprang up the icy cone with the strength and fleetness of a chamois. Upward and onward, and still upward, unwearied and unceasing, he kept his skyward way,

till the astonished troops below, who had followed him until he appeared like a minute speck on a snow-white spire, could scarcely see him, and soon the mountain mists and twilight veiled him from their view.

Three days and nights they remained encamped at the foot of the mountain, and he did not re-appear. His death was then considered certain. The camp was ordered to be struck, and the soldiers returned to the capital. The emperor received the news of the failure and death of the bold aspirant for his crown, with undisguised delight. For, in sending him thither, he had only sent him to a more lingering species of death than he could have received from the axe of the headsman. The princess, though struck with deep grief, gave not away to despair, for there was an anchor of hope in her soul to which she secretly clung.

VI.

The day following the return of the troops, an embassy from the Inca of Peru arrived at the court of the emperor, to negotiate a marriage between the heir apparent to his throne and the princess Eylla. This proposition at once met with the approbation of the emperor, who was desirous to secure his daughter against farther attachments of a like nature with that from which he had just rescued her. The princess Eylla, therefore, was commanded to prepare herself for the nuptials, by proxy, to take place on the third day after the arrival of the embassy. The limits of a story will not permit us to enter into the feelings of the princess on this announcement. She consented and obeyed, because she looked for a diversion in her favor ere the fatal hour arrived—for she had not yet given up Montezuma.

The bridal hour arrived; and the proudest hall of the imperial palace was gorgeously decked with banners, hangings of gold and crimson, and innumerable suns composed of diamonds and precious stones. The pride and pomp and magnificence of the nobles was displayed in a degree hitherto unapproached. The emperor, arrayed in his imperial robes, was surrounded by his court—the princess Eylla, in robes of snowy white, shining with pearls, and her bright hair glittering with jewels, stood on his right, her hand in his—while the proxy of the prince of Peru stood on his left. The first words of the ceremony had begun to be spoken by the high priest of the sun, when a sudden commotion at the entrance of the hall drew all eyes and interrupted the rites. The color came like a flash of sun-light to the pale cheek of the princess, as she looked up at the sound. The next moment a noble youth, magnificently attired in cloth of gold, silk and velvet, with a dazzling coronet on his brows, in which blazed a crescent of diamonds, each of which rivalled in size and splendor that on the imperial crown, strode through the throng of courtiers, who made way for him as he advanced, and coming within the circle about the monarch, knelt before him, holding extended in his right hand a single diamond of wonderful size and beauty. Instantly every eye acknowledged it to be the counterpart of that on the imperial diadem.

"MONTEZUMA! It is Montezuma!" cried a hundred voices.

"I am Montezuma," was the reply of the young

man, rising from his knee and looking proudly around; but his eye softened as his glance fell on the lovely princess, who, between surprise and joy, was near fainting in the arms of her attendants. "I am Montezuma, and have come, emperor, to claim the reward of my success. Behold the twin-diamond to that in the regal crown!"

As he spoke, he elevated it aloft, in juxtaposition with that on the crown, and placed it to every eye in full comparison. A loud shout acknowledged the likeness, and then Montezuma placed it in the hands of the surprised monarch.

Without speaking, the emperor took the hand of the trembling, joyful Eylla, and placed it in that of the proud youth; and as thus together the beauteous pair stood before the throne, the heart of every one present, not excepting that of the imperial parent himself, confessed that Nature had formed them for each other, though, hitherto, fortune had placed them widely apart. The loud acclamations that hailed them ceased with a wave of the emperor's hand, and he thus addressed the bridegroom:

"Take her, MONTEZUMA THE FIRST. The word of an emperor was pledged and is redeemed. The great Sun hath destined thee to become the progenitor of a new race of emperors. Long may thy race live and peacefully reign. But the spirit of prophecy tells me that a thousand years will be the end of thy empire, and that the last of thy name shall become the slave of a chief, whose coming shall be from the rising of the sun, and from a world unknown to ours."

The emperor then removed the crown from his head, and placed it upon the brow of the happy princess. The rites were once more renewed, and the voice of the high priest, once more lifted up, made the noble Montezuma and lovely Eylla one. The hand of the emperor then placed them on the throne, which their descendants filled for many centuries, until the last bearer of the proud name of Montezuma lost his empire, his power and his life, by the hands of invaders, whose coming was from the rising of the sun, and whose pathway was deluged with blood.

IMPROMPTU TO A LADY BLUSHING.

BY C. F. HOFFMAN.

The lilies faintly to the roses yield,

As on thy lovely cheek they struggling vie,
(Who would not strive upon so sweet a field
To win the mastery?)

And thoughts are in thy speaking eyes revealed,
Pure as the fount the prophet's rod unsealed.

I could not wish that in thy bosom aught

Should e'er one moment's transient pain awaken,
Yet can't regret that thou—forgive the thought—
As flowers when shaken

Will yield their sweetest fragrance to the wind,
Should, ruffled thus, betray thy heavenly mind.

December, 1839.

THE HISTORY OF VIRGINIA.

Dedicated to Mrs. M. B. C. of S., Charles City County, Virginia.

The history of our own Commonwealth merits our peculiar study. We are, however, so accustomed from our childhood to admire the grandeur of ancient kingdoms and republics, looming to a false magnitude through the mists of time and distance, that our own country has come to be looked upon as rather tame and common-place. We have been so occupied with that series of stupendous events that agitated Europe during the last age, whose echoes have hardly yet died away on the ear, that we have wanted leisure to bestow on our own more simple and homely annals, and thus, amid these 'towering gogs and magogs,' the history of this old Commonwealth appears to be forgotten. As no man is a hero to his *valet de chambre*, so it would seem as if it were impossible for our own country to look heroic to us. Added to this, the lava of party continually vomited up from a thousand volcanic craters, pours incessantly over the land, withering in its track the lovely flowers of taste and patriotism; and in the excitements of the present, we forget the lessons of the past. Let us retire from the din of this party warfare, which is the stigma and threatens to be the ruin of the republic; let us quit the arena of strife and repair to the sequestered haunt of the muses; let us fly the poisoned chalice of rancor and animosity and hatred, and taste that purer banquet of nectar and ambrosia that lies neglected around us.

It has been supposed by some of our philosophers, that the population of the world before the flood was more numerous than at the present day; and from the extraordinary longevity of the antediluvians, it has been inferred that they were advanced to a far higher pitch of perfection in science and the arts, in agriculture, commerce, architecture, navigation, and the like, than has ever been attained since the abridgment of the period of human life. Will geology allow us to suppose that this Virginia of 1839, which we inhabit, was peopled before the flood? Perhaps the colossal mammoth once trod her soil. Primeval giants may have feasted on Back River oysters and canvass-backed ducks of the Potomac—here some 'Jubal may have struck his chorded shell,' and some patriarchal Methusaleh, with a snowy beard of centuries, may have pastured his flocks and herds on the verdant declivities of the Blue Ridge.

The beds of marine shells found deposited on the highest ranges of the Alleghanies, confirm the Mosaic account of a universal deluge, and indicate that this portion of the globe has been buried a thousand fathoms under water. The antediluvian Virginians (if there were any such,) who dwelt within reach of the mountains, doubtless at that appalling conjuncture, betook themselves to their summits for safety; where, mingling their shrieks with the cries of wild beasts, and the roar of waters, and the wailings of the tempest, and the last thunders of a dissolving universe, they perished of starvation, or were at length overtaken by the inevitable surges of destruction.

It is now well established, that the Indians of the present day are either degenerated from some more civilized race, or were preceded by a distinct and superior peo-

ple. This fact is attested by numerous monumental evidences—such as cromlechs, altar-stones, circles of memorial, rocking-stones, and *tumuli*, (a) or barrows. Whether the antecedent race were Celts, or Jews, or Egyptians, or Huns, or Canaanites, or Hindoos, or Japanese, (as has been variously contended by our philosophers) is a question, the solution of which, like that of the Gordian knot, is more mysterious than important. However that may be, the dark hair and eyes universal among the natives of the cis-atlantic hemisphere indicate an Asiatic origin. The first pioneers of America, probably passed over from Asia, at Bhering's straits—where, perhaps, the two continents were once connected together by an isthmus, as Virgil supposes was the case with Italy and Sicily at the straits of Messina. Like a herd of buffalo, by chance straying among the flowers and verdure of some sequestered prairie, they snuff with rapture the fragrant and unaccustomed gales, and speedily darken the entire plain with their forms. The current of migration, then setting from west to east, the tawny Asiatic advanced to the barriers of the Atlantic; while now the fair-haired, blue-eyed Anglo-Saxon is moving onward from the east to the west, like a steady conflagration, destined to be checked only by the waves of the Pacific.

An ancient chronicle of Wales records, "that a civil war having occurred in that kingdom, upon the death of the king Owen Gwinneth, between his two sons, respecting the succession to the crown, the unsuccessful one, in a fit of disgust and chagrin, put to sea on new discoveries, and sailing from some port in Spain, he discovered a new world of singular beauty and fertility, and uninhabited. Upon his return, he transported from his native mountains a large number of people thither with him in three several voyages. The name of this adventurous young prince was Madoc-ap-Owen-Gwinneth, and among the places he discovered was Virginia." Modern travellers are said to have met with British words in North America, and an old author informs us that the people of Virginia and Guatemala were accustomed to celebrate the memory of one Madoc, an illustrious and ancient hero.

In the year 1727, Colonel William Byrd, a man of note in the colony of Virginia, visited the Tuscarora (he calls them Tuskeruda) Indians of Carolina, and among them he heard this tradition concerning Madoc. He records in his journal, with apparent confidence in its truth, the account of one Morgan Jones, a Welch minister, who, at New York, in the year 1685, certifies, that in the year 1660, he accompanied in capacity of chaplain, Major General Bennet of Nandsemund county, Virginia, in an expedition to Carolina, where by chance he fell prisoner into the hands of a tribe of Indians called the Doegs, who, he avers, spoke the Welch language, and he had the satisfaction to preach to them three times a week for four months, in the same tongue. They were seated on the Pontigo (now Pamlico) river, not far from Cape Hatteras. This deponent further offers to conduct any person who might doubt his statement to the place, and there convince his incredulity by ocular or rather auricular demonstration. (Burk's Hist. of Virginia, vol 3, p. 84.)

Such is the testimony. We may be permitted to de-

(a) An extensive and remarkable mound has lately been excavated in the vicinity of the town of Wheeling in this State.

cline yielding it implicit credit; because, first, there was a tribe of these Dogs in Virginia proper, and it doth not appear that they spoke the Welch tongue—a fact so extraordinary, that (had it existed) it could hardly have escaped notice; and, secondly, because no vestiges of these Cambrian savages have since been detected.

Virginia was discovered in the golden reign of queen Elizabeth, the age of Sidney, Spenser, Bacon, and Shakspeare; when England, like Amphitrite in her car of pearl, armed with a trident, rode over the seas, unfolding the red-cross of St. George in distant climes, and laying the foundations of her extensive empire. The early colonial adventures to Virginia were patronized by Sir Walter Raleigh, in spite of repeated failures and disappointments, and at a serious sacrifice of his private fortune. His life was a series of illustrious achievements, and his death has left a stain on the memory of Lord Coke, his vindictive prosecutor, and James the first, his heartless monarch, which the stream of time can never efface. The life of Smith, the father of the colony, is like some fabulous story of romance; the child of fortune, he is at one time, like the prophet of Nineveh, cast into the sea to propitiate the winds of Heaven; at another, he is thrice victorious over the chosen champions of the crescent, Turbishaw, Crualgro, and Bonnymulgro; the distinguished protégé of “the beauteous Tragabigzanda, the charitable lady Callumata, and the blessed Pocahontas, the great king’s daughter of Virginia, who so oft saved his life.” He encounters the ferocious Indian in his native haunts; in an open boat with a handful of men, explores the Apamatuck, Powhatan, Pamunkee, Rappahannock, and Patawomeke; endures privation, toil, peril and persecution; sustains the colony by his discipline, guides it by his wisdom, and protects it by his valor.

Captain Smith has been reproached for not marrying Pocahontas, who had rescued him from impending death, fulfilling for him the words of the familiar song:

“Through the furnace, unshrinking, thy steps I’ll pursue,
And shield thee and save thee or perish there too.”

But it ought to be observed, that at the time when that dramatic incident took place, Pocahontas was a girl of only about twelve years of age, and Smith about twenty-eight; accordingly, she herself seems rather to have regarded him in the light of a father, and it was by that appellation, that she was in the habit of addressing him. In fine, her passionate attachment to Rolfe, proves that at the period of her union with him, she was ‘in maiden meditation fancy-free.’

Captain Smith’s ‘Generall Historie,’ vol. 1, p. 120, gives an account of a prodigious giant tribe of Indians, the Sasquesahanocks, whom he met with at the head of Chesapeake bay. This relation has been rejected as incredible, and considered as on a footing with the stories of Baron Munchausen or Sinbad the Sailor. Monumental evidences have, however, within the last age, come to light, which would seem to confirm the existence of such a race of giants. Human bones of extraordinary size, thigh bones three feet in length, and skeletons seven feet in length, have been discovered on Flint run in the county of Shenandoah, on Hawkbill creek, Tuscarora creek, and on the South Branch of the Potomac. (Kercheval’s Hist. of the Valley, pp. 55 and 59.)

“There are more things in Heaven and Earth, Horatio,
Than are dreamed of in your philosophy.”

On the rivers of lower Virginia, Captain Smith found thirty tribes of Indians, twenty-five hundred warriors, and an aggregate population of about twelve thousand—not more than are now contained within the limits of a single county. It is supposed that Virginia was inhabited by three nations, each speaking a distinct language—these were the Mannahoacks, the Monacans, and the Powhatans—the two former being allied against the latter, as in the present day. The Tuckahoes and Cohees are somewhat antagonistical. The Powhatans extended from the sea-shore to the falls of the rivers, and were a powerful nation, consisting of twelve tribes, seven on the western and five on the eastern shore of the Chesapeake bay; each of these tribes was subdivided into towns, families, and clans. (Jefferson’s Notes in App. p. 214.) Some of the Powhatan tribes refused allegiance to Powhatan. They appear to have been a species of Nullifiers.

These all ‘groped in the dim twilight of nature,’ their souls ‘cabin’d, cribb’d, confined’ within a narrow circle of animal instincts, and the necessities of a precarious subsistence; strangers to that Arcadian paradise, those Elysian scenes, of which youthful poets have fondly dreamed. Yet here and there a solitary gleam of light shoots across the surrounding gloom. In Opechancanough we perceive perfidy blended with heroism; in Powhatan the cruelty of a savage despot, and the tenderness of a doating father; and in Pocahontas the graces of some guardian angel descended from the heavens. Opechancanough was brother of Powhatan, and king of Pamunkee. His place of habitation was on the angle of land included between the Pamunkee and Mattaponi rivers at their junction, now West Point. He was the author of the great massacre of 1622, the ‘Sicilian Vespers’ of the colony. When very old and infirm, and nearly blind, he headed his people in battle, borne on a litter; he was at length captured by Governor Berkeley with a party of horse, and finally assassinated by a private hand while a prisoner at Jamestown, displaying to the last moment the fortitude of a ‘stoic of the woods,’ unimpaired by age, and unshaken by calamity.

“Powhatan caused certain male-factors to be bound hand and foot, then gathering the live coals from a great many fires, and raking them together in the form of a cockpit, they were thrown in the midst to be burnt to death.” (Smith’s Hist. of Virginia, book 2, p. p. 144-5.)

Master Ralph Hamor, in an interview with Powhatan, at Matchot, on the Pamunkee, told him that Sir Thomas Dale, the governor, ‘hearing of the fame of his youngest daughter, desired in any case, he would send her by me unto him, in testimony of his love, as well for that he intended to marry her, as the desire her sister (Pocahontas) had to see her.’ He answered, ‘for my daughter, I have sold her within this few days, to a great Werowance, (b) for two bushels of Rawrenoke, (c) three days journey from me. * * That he loved his daughter as his life, and though he had many children, he delighted in none so much as she, whom if he should not often behold he could not possibly live; * * and he held it not a brotherly part to desire to

(b) Captain.

(c) Indian shell-money.

bereave him of his two children at once.' (Smith, book 4, pp. 19 and 20.)

The private name of the celebrated princess was Matoaca; Pocahontas was her titular name, in the same way as Powhatan was the title of her father, and his individual name Wahunsonacock. Pocahontas, after her capture and conversion to christianity, was christened Rebecca, and was commonly styled the lady Rebecca. She had a brother, Nautiquaus or Nautiquoud, who showed Captain Smith 'exceeding great courtesy,' strenuously interceding with his father in behalf of the captive, and was the 'manliest, comeliest, boldest spirit he ever saw in a savage.' Pocahontas had a sister named Cleopatre, and another named Matachanno, whose husband, Tomocomo, or Uttamacco-mack, accompanied Rolfe to England. Being charged by Powhatan to inquire and ascertain how many people there were in England, on his arrival at Plymouth, he began to take the census by keeping tally on a stick, cutting a notch for every one he saw in the streets. On his return to Virginia, when Powhatan interrogated him as to the number of the English, he replied, 'count the stars in the heavens, the leaves on the trees, and the sand on the sea-shore.' 'Pocahontas with her wild train, visited Jamestown as freely as her father's habitation,' and 'was of a great spirit however her stature.' She was chaperoned to court (by lady De-la-warre, (d) attended by Rolfe her husband, lord De-la-warre, and other distinguished persons) in an English dress, and with her raven hair in curls, if we may rely upon the old portrait at Cobbs'. The lady De-la-warre, and other persons of quality, also waited on her to the masquerades, balls, and other public entertainments, with which she was wonderfully pleased. She was also eagerly sought, and kindly entertained every where, many courtiers and others daily flocking to Captain Smith to be introduced to her. She died at Gravesend, England, on the eve of her return to Virginia, aged twenty-two, 'causing not more sorrow for her unexpected death, than joy to hear and see her make so religious and godly an end.' Her infant son, Thomas, was left for a time at Plymouth, under the care of Sir Lewis Stenkley, and afterwards educated by his uncle, Henry Rolfe, of London. He left an only daughter, who married Colonel Robert Bolling, by whom she left an only son, Major John Bolling, father to Colonel John Bolling, and several daughters, who married Colonel Richard Randolph, Colonel John Fleming, Dr. William Gay, Mr. Thomas Eldridge, and Mr. James Murray.—(Stith's Hist. of Virginia, book 3, pp. 144 and 146.)

The Indian summer, that lovely portion of the year when nature is veiled in dreamy, poetic mists, was to our early ancestors a period of apprehension and alarm; it was then that the savage, taking advantage of the smoky haze that enshrouded the earth,

'Came down like a wolf on the fold,'

stealing like a panther through the shade of the forest, with the noiseless tread of his mockasin, hardly stirring a leaf in his insidious approach; he comes, 'and the darkness of midnight glitters with the blaze of their dwellings, and the warwhoop awakes the sleep of the cradle.'

(d) Delaware.

The Indian is gone; the howl of his dog no longer echoes in the woods, nor is the dip of his paddle heard on the water. He is gone—the wave of extermination urges him onward—onward to the setting sun; and as we behold their tribes fading one after another forever from the map of existence, in the contemplation of the injuries they have suffered, we are almost constrained to justify the cruelties they have perpetrated.

Lord Bacon says, "It is a shameful and unblessed thing to take the scum of people, and wicked condemned men to be the people with whom you plant." This maxim seems not to have been regarded in the early colony at Jamestown, which appears to have been considerably encumbered with 'decayed tapsters and ostlers trade-fallen; the cankers of a calm world, and long peace,' 'starveling gallants, poor gentlemen, younger sons of younger brothers,' 'tuffassety humorists,' mere drones, '*fruges consumere nati*.' When the colony, however, had weathered the vicissitudes of infancy, and began to lift its head from the storm, Virginia received continual accessions from the honest yeomanry, and the gentle blood of the mother country. A curious feature of the commerce of that day, was the importation of wives. The price of a wife was one hundred pounds of tobacco, worth then (when but little was made) perhaps sixty dollars; but now in 1839, worth, if they would take lugs, eight dollars; if they insisted on leaf, say twelve. Single gentlemen in this day, oppressed with the difficulties of effecting a matrimonial arrangement, will sigh to think how much better they managed this thing in the good old times; and that although the 'schoolmaster is abroad,' and steam power reduced to such perfection, that it will not be long before every man may ride to market on his own tea-kettle, and the old women in the country go to meeting on their coffee-pots, yet the world has decidedly retrograded in several important particulars. However that may be, an importation of an assorted cargo of young ladies, is an affair now quite out of the question, for it is certain Mr. Clay would put 'em in the tariff, and tax 'em under the head of superfluities.

In the settlement of the Atlantic coast, we see the puritan stand on the rock of Plymouth,

'With his bosom bare,

Nor heeds the storm that howls along the sky.'

On the banks of the Delaware, the broad-brimmed Penn pitches the 'tents of peace,' and smokes with the red man the calumet of friendship, and sounds the city of fraternal love. Baltimore, and his Roman Catholics, come to seek repose on the borders of the Chesapeake. To the sunny clime of Carolina, the Huguenot comes flying from the frowns of Louis the Fourteenth; and to Virginia, the English cavalier, banished from his native kingdom by the tempest of civil war. To all these, America expanded her arms; to the child of adversity, the victim of oppression, the pilgrim of every garb, and the exile of every name.

In Virginia the law of primogeniture gave rise to a landed aristocracy, the centre of which was the colonial court—the miniature image of royalty, around which moved the beauty, wit, fashion, and wealth of the province. With the decline of this *caste*, have disappeared in a measure, ease, grace, repose and finish of manner—plants which flourish better in the hot-bed of a

court, than in the open air of a republic. As the colony extended her confines, the people of the frontier, the turbid foam of the wave, with the hardy virtues of a pastoral state, contracted much of its grossness and ferocity. The Virginians regarded with filial affection, England, the ancient seat of arts and arms, and they still styled her their home. Their loyalty survived, (with slight interruptions,) down to the era of the American revolution. During this period, the education of the common people was neglected. In 1671, Sir William Berkeley "thanks God there are no free schools nor printing—and hopes we shall not have these hundred years to come." The first printing-press erected in Virginia, in 1682, was shortly after put down. This occurred under Charles the second. The first newspaper, *Purdie's Gazette*, was published in 1736, under George the second—and it remained many years "solitary and alone." Trade was hampered by monopolizing acts, and the crown did not scruple to lavish vast bodies of land on court favorites, "refused its assent to laws the most wholesome and necessary for the public good," and too often committed the reins of government to hands incompetent or corrupt. Virginia is hardly once mentioned in Hume's History of England, and neither the Stuarts nor the Guelfs seem to have bestowed much of their royal care upon their "ancient dominion of Virginia." Yet of her forty colonial governors, many were able and virtuous men, and from the accession of William the third, the administration of government seems to have been in general, just and tolerant.

The earliest account of Virginia, was written by George Heriot, a learned mathematician, sent out for that purpose, by Sir Walter Raleigh, at the bidding of queen Elizabeth. This work is preserved in the "Voyages of Hackluyt." An extract therefrom may be found in Smith's History of Virginia, book 1, page 94. For an account of Heriot and his voyage, see Oldy's "Life of Sir Walter Raleigh," prefixed to "Raleigh's History of the World." At the same time with Heriot, was sent out John Wythe, a painter, to sketch the new country, and its inhabitants; and his drawings are the originals whence Beverley's illustrations have been deduced. Captain Smith's History is composed from accounts of the country by thirty of the first settlers beside himself. Among these thirty writers, the name of John Rolfe who married Pocahontas, appears several times.(c) An account of the state of the colony written by him has been recently published in the *Messenger*. After Smith, come Stith, Beverley, Keith and Burk, with his continuators, Jones and Girardin. In 1632, George Sandys, son of the archbishop of York, one of the council of Virginia, translated Ovid's "Art of Love." He was pronounced by Dryden the best versifier of the age. In 1639, governor Berkeley published the "Lost Lady," a tragi-comedy, and in 1663, his "Discourse and View of Virginia." A curious manuscript account of Bacon's Rebellion, was purchased at the sale of a bookseller's stock in London, by Rufus King, minister at that court, and by him, in 1803, sent to Mr. Jefferson. The original is preserved in the library at Washington, and it has been several times published. It was written thirty years after the event it describes, at the desire of Harley, Lord Oxford. The author describes himself as a planter of Northumber-

land county, Virginia, who represented the county of Stafford, in the year 1676, and subscribes his initials, T. M.

There is said to be still extant a manuscript history of Virginia, by Edmund Randolph, and there is a tradition that a similar work was composed by John Page, of Rosewell. General Washington mentions in a letter, that Richard Bland, of Jordan's, in the county of Prince George, was at one time collecting materials for the same purpose, which, however, he did not live to effect. There is in existence a considerable number of letters and other writings, found among the surviving manuscripts of Theodorick Bland, of Cawson's, in the county of Prince George, which, if published, cannot fail to throw a considerable light on the history of the State. The Byrd manuscript of Brandon, is said to contain much valuable information, of which only a part has yet been published. The Virginia Historical Society has published a "Memoir of Indian Wars" by Colonel Stuart, of Greenbrier county, and the trial of Grace Sherwood, in the county of Princess Anne, for witchcraft, in the year 1705. The court after a long debate, ordered her to be searched by a jury of women, whereof Eliza Barnes was forewoman. They also ordered her house to be searched, to see if she had "images and such like things." At the July term, the court directed the sheriff to take men and boats, and meet "at John Harper's plantation," and "then put the said Grace into water, above man's depth, and try her, how she swims therein, always having care of her life to preserve her from drowning;" and he was further to request "as many antient and knowing women as possible he can," "to search her carefully for all spots and marks;" and "five antient women" who searched her, declared "she was not like them or other women;" whereupon the court ordered the sheriff to secure her in the common jail, "by irons or otherwise," to await a future trial.

The history of this Commonwealth has been illustrated by the luminous intellect of Jefferson, the vigor of Marshall, the graphic diction of Lee, and the splendid imagery of Wirt. Of "Hening's Statutes of Virginia at Large," the learned Mr. Bancroft says, "no other state in the Union possesses so excellent a work on its legislative history." Sparks' magnificent work, "The Writings of Washington," may be ranked in American literature, as the federal capitol in American architecture. Of the minor works connected with the revolutionary history of Virginia, may be mentioned the "Travels of Anburey," those of the Marquis de Chastellux, and the "Campaigns of Lieutenant General Tarleton."

The old histories of Virginia are out of print, obsolete, seldom seen, more seldom read. While the press teems with myriads of ephemeral fictions, continually emerging on the face of the ocean, bubbles born only to expire, how long shall the old chronicles of Virginia, be doomed to slumber in oblivion? When shall another Hening arise to explore the buried Herculaneum of the past, and unfold to the light of day, the precious memorials which time and chance have spared? How many curious and important documents are now mouldering in old drawers and garrets, covered with the dust of neglect?

The history of Virginia comprehends a wide and un-

(c) Smith, book 4, pages 21, 33 and 36.

cultivated field—her settlement, constitution, laws, and statistics, with all that train of events, which the wheel of time has turned up in the colonial era, or during the revolution, or since its happy consummation. An acquaintance with this history, as it is one of the first duties of patriotism, so it cannot fail to multiply our associations, add a new charm to many a dismantled seat, dilapidated church, (f) and moss-grown tombstone. It will inspire us to treasure with religious care, the recollections of a former day, floating as they are on the bosom of a precarious tradition. Is there a young Virginian who cares not to inquire, what were those propitious influences that developed the energies of Patrick Henry, who in the woods of Hanover, tuned his untutored voice to a note of eloquence, which, from a little spark, kindled up the flames of revolution; an eloquence which blended the tints of the rainbow with the thunders of the cataract? Is there a young Virginian who does not care to trace the story of Washington, from his venturous mission in the snowy wilderness, amid the carnage of Braddock's defeat, or like an eagle above the clouds of revolution, towering aloft, and "beholding with serenity the tempest and the storm forming beneath his feet?"

This history of Virginia is worthy of study, when we consider her extensive territory; the variety of her soil, climate and productions; her pilgrim sons scattered from the Alleghanies to the banks of the Colorado, who, wherever destiny may cast their lot, like the fire-worshipper, still with pious devotion turn their eyes back to their father-land in the east. This history is worthy of attention, when we consider her advancing agriculture; her vallies carpeted in flowery verdure; "her hoary mountains covered with a thousand mists;" her rivers murmuring down from the highlands and pouring their tributary waters into the bosom of a superb bay;

"Her dark caves, where hidden crystals shine,
And wild arch across the blue sky thrown;"

above all, when we consider the fame of her distinguished sons, and the charms of her lovely daughters.

Petersburg, Va.

CHANSONETTE.

BY C. F. HOFFMAN.

They are mockery all, those skies! those skies!
Their untroubled depths of blue;
They are mockery all, these eyes! these eyes!
Which seem so warm and true;
Each quiet star in the one that lies,
Each meteor glance that at random flies
The other's lashes through.

They are mockery all, these flowers of Spring,
Which her airs so softly woo;
And the love to which we would madly cling,
Ay! it is mockery too.

For the winds are false which the perfume stir,
And the lips deceive to which we sue,
And love but leads to the sepulchre,
Which flowers spring to strew.

THE STREAM AND THE FLOWER.

I.
A stream was rushing on
With music in its tone:—
And around the leaves were falling fast,
As the withering breath of the autumn blast,
Swept moaning thro' the bower;
And many a one, on the waves, was strewn,
Of that laughing tide;
While upon each side,
Of the pride of their glorious raiment shorn,
Lay blighted many a flower.

II.
But still that stream flew by
With that same melody:
And tho' 'twas the scene of the dying year,—
Tho' the flowers that were lately blooming near,
Their beauty and perfume fled,
On the shores of that streamlet withering lay;—
Yet changeless and free,
That same voice of glee
It poured, as upon its joyous way,
To its Ocean-home it sped!

III.
On—on, 'mid flash and spray,
It held its joyous way!
What reck'd it for change in the things around?
The flowers and the leaves that strew'd the ground,
Or the breeze's wailing tone!
The stream knew no change in the voice of its glee:
But, high on the air,
Rose joyous and clear,
The song of its triumph, as on to the sea,
Wildly its waves swept on!

"The glory of the summer-time
Is fading fast away,
The beauty and the bloom of earth
Are hast'ning to decay:
"The wailing of the Autumn-wind
Swells wildly on the air,
Murmuring, as it sweeps along,
The requiem of the year:
"The forest leaves are falling thick,
In sadness and in gloom,
And the gentle flowers are dying
In the freshness of their bloom;—
"But tho' all else around decay,
The same from fount to sea,
I leap upon my path of joy,
Unchangeable and free!
"A cloud is on the sky above,—
A gloom on earth below,—
A voice is on the breezes borne,
A voice of death and woe;—

"The glory of the parting year
Is gone forevermore,
Its beauty and its melody
Have faded from my shore ;—

"But there comes for me no change or gloom,
No sadness or decay,
From year to year, for aye the same,
I hold my gladsome way ;

"Whate'er betide the world beside,
My waters still sweep on,
With beauty in their wild-waves' play,
And music in their tone !"

The lovelier for its loneliness,
One flower still decked the wilderness !
Of all that "starry multitude,"
That lately crowned the smiling year
But now lay scattered, scentless, sere,
The loveliest and the last it stood,
With hue still bright—still sweet its breath—
A gem upon the brow of death !
The autumn blast that stripped the bowers,
And withered all its sister-flowers,
Paused, as it viewed this lovely one,
And, by its glorious beauty won,
Passed by, upon its mournful way,
And bade it bloom another day.
Thus loveliness a charm doth wear—
The bolt the boy-god used to bear,—*
That checks the strong man in his wrath,
And turns him from his bloody path ;—
That shameth Vice's shameless brow,
Bidding the blush e'en there to grow ;—
And, hearts that own no other right,
Bow down to modest beauty's might !

Yet, still, its doom was but delayed,—
The tyrant hand was only stayed :
And sadly now the gentle flower
Begins to feel the deadly power.
Its fading leaves are curling up—
The dew is frozen in its cup,—
The gloss is gone from its silken fringe,—
Its hues have taken a paler tinge,
And the last, lone flower of the dying year
Is hast'ning its sister's doom to share.
But ere it bowed its head in death,
Thus to that stream it sighed its parting breath :—

"Proud torrent ! thou art sweeping by,
With triumph on thy course,
For thee there comes no time to die,
No failing to thy source !

"From year to year,—by day and night,—
Thy waters pour along,
With nought to stay their onward flight,
Or check their gushing song !

"Yet tho', proud stream ! mine hour is come
To fade and pass away,
I envy not thy changeless doom,
Nor longer wish to stay !

* Alcibiades wore a shield, upon which Cupid was painted bearing a thunderbolt.

"To be immortal here below
Amid the things of clay,—
No change, or fear of change to know,
Where all else feel its sway ;—

"Better like us, to fade and die,
In the blushing of our bloom,
Than share so dark a destiny,
So desolate a doom !

The flower's sad song was hushed ;—and far around,
Its withered leaves were scattered on the ground !

ELIA.

Frederick, Oct. 10, 1839.

OLD HOUSES.

I love an old house. Even though its walls, battered and decayed, speak of nothing but poverty and toil, still there is something touching in the thought of the tide of human passions and human affections which have flowed through it ; of the happy marriages, the joyous childhood, the cheerful age which it has sheltered ; of the many spirits which it has beheld beginning the strife of being, which, after enduring the labor and heat of the longest of life's days, have gone to their eternal home, of whose existence not a single trace remains in any mind on earth. It is not necessary that the many centuries which are required in older countries to invest the habitations of man with the venerable dignity of old age, should have swept over its threshold and its hearth-stone to sanctify to my heart one of those quaint constructions which I love to people anew with the beings of a vanquished generation. All I ask, is, that it should speak to me of the past—of the forgotten.

It is my delight to take my solitary walk through those streets of our city which have suffered least from the levelling hand of modern improvement. I eschew, as I would an infected district, that mushroom growth of human habitations which has climbed the airy heights of west Boston, and filled up its pleasant valleys, where in my boyhood I used to play, with a profane load of brick and mortar. But where Washington street extends its tortuous length, and where the North End displays her labyrinthine maze of narrow lanes and alleys—now, alas ! with a pitiful ambition all erected into streets, as every petty prince must now-a-days forsooth be a king—there, to the mind of a true lover of by-gone days, the spirit of the past broods as sensibly as over the most ancient metropolis of Europe. What matters it to him that the din of busy life is in his ears, that he is jostled at every turn by eager traffickers, and that his escape with life from the thundering throng of drays and stage-coaches, is a standing miracle ! He hears not the uproar ; the bustle disturbs not him ; his eyes are with his heart in the good old days when school-boys played unmolested in what are now the busiest thoroughfares. Visions of fine old men, in a costume worthy of the dignity of men, and gorgeous dames worthy of the men they loved, float before his mental sight. He walks in the midst of a generation which now lives on earth only on the canvass of Copley ;

where their brocades and satins still rustle, and their faces still beam with the bloom of immortality. The old walls around him are still vocal with the mirth and gladness of households which many a sorrow has chastised; with the frolic laugh of children who have long since reached, faint pilgrims! the utmost boundary of human existence, and gladly laid down the load of life in the still chambers of the tomb. Friendly faces look kindly upon him from the casements; sweet, though solemn voices tell him of the days gone by; and remind him that the century that will comprise the lives of all his contemporaries is hastening on rapid wings to join the ages before the flood, and that the hour will soon be here when the memory of him and his will be swallowed up in the advancing tide of coming ages, as a drop of rain melts into the ocean. The roofs under which our fathers lived and died are full of instruction; they teach us a lesson, mournful, yet pleasant to the soul, of the brevity of human life and the uncertainty of human hopes.

This edifice before us is but of yesterday as it were; and yet who laid the corner-stone? Who counted the cost, and thought he was undertaking a work of mighty moment? Where are the hands that reared the pile, and brought daily bread to their children from their daily toil? Where is she who first established within its boundaries the gentle sway of domestic government? Perhaps she passed over its threshold a smiling, tearful bride, casting a lingering look behind at the happy home she had left, yet regarding the one before her with the hopeful confidence of a woman's heart. Where are the troops of friends which flocked to its portals with cheerful looks and hearty congratulations? Where are the children, in whose promise and success hearts were garnered up? They have all departed from the earth. To us they are as if they had never been. One after another their funeral processions have blackened the streets. For each in succession have human hearts refused to be comforted, and for a season thought that the sun would never shine on them again as it used to do, until time, and care, and fresh griefs plucked from the bosom the sorrow which seemed to be rooted there for ever. One by one the actors who played their parts on this little stage have withdrawn from the scene, and the curtain long since dropped when the last lagging veteran retired, and the drama was ended.

But although I love an old house in itself, for its own sake, and independently of any specific associations, yet in a special manner do I delight in the dwellings of my old familiar friends, whose faces are familiar to my eye, whose characters are dear to my heart, whose various fates are as present to me as my own personal history. Mistake me not. I do not mean any of the round-hatted, frock-coated, breeches-less generation which now encumber the streets. I care but little for this stereotyped edition of humanity—all bound alike, and not differing much in the nature and value of their contents—like the washy concoctions of some knowledge-diffusing society. No! no! I refer to times when "Nature's Copy" wore a dress which spoke to you of the meaning it contained; as in some solemn library the tomes,

"Which Alders printed or Du Luell has bound,"

tell you, even before you open them, of the classic mind within.

Too few, alas! of these abodes, consecrated by the memory of departed worth, have escaped the ruthless hands of the money lovers of this age; who regard one of my dear old houses as only so much improvable real estate; and who think of nothing when they gaze on its time-honored walls but how much the old materials will bring. The good old class of "garden houses," in which it is recorded that Milton always chose to live, is now almost as entirely extinct here as in London itself.

How well do I remember one of these in which some of my happiest days and merriest nights were spent! It stood with its end to the street, overshadowed by a magnificent elm of aboriginal growth, which made strange and solemn music in my boyish ears when the autumn winds called forth its hidden harmonies at midnight. Entering the gate, you proceeded on a flagged walk, having the house close to you on your left, and on your right the courtyard filled with "flowers of all hues," and fragrant shrubs—each forming the mathematical centre of an exact circle cut in the velvet green sward. When within the front door, you had on your left hand the best parlor, opened only on high solemnities, and which used to excite in my young mind a mysterious feeling of mingled curiosity and awe whenever I stole a glance at its darkened interior, with its curiously covered mahogany chairs, black as ebony with age—its blue damask curtains, the rare piece of tapestry which served as a carpet—all reflected in the tall mirror, with its crown and sceptred top between the windows. I remember it used to put me in mind of the fatal blue chamber in Bluebeard. I am not sure now that there was not something supernatural about it.

But it was the parlor opposite, that was the very quintessence of snugness and comfort, worth half a hundred fantastic boudoirs and modern drawing rooms bedizzened with French finery. On your right hand, as you entered, were two windows opening upon the court yard above commemorated, with their convenient window seats—an accommodation which I sadly miss—with their appropriate green velvet cushions, a little the worse for wear. On the opposite side of the room to the windows, was a glass door opening into the garden, a pleasant sight to see, with its rectangular box-lined gravel walks, its abundant vegetables, its luxuriant fruit trees, its vine trained over the stable wall! As you returned to the house through the garden door, you had on your right the door of a closet with a window looking into the garden, which was entitled the study, having been appropriated to that purpose by the deceased master of the house. This recess possessed substantial charms to my infant imagination; as the perennial fountain of cakes and apples, which my good aunt, (of whom presently,) conducted in a never failing stream to the never satisfied mouth of an urchin of six years old. I thought they grew there by some spontaneous process of reproduction.

A little further on, nearer to the study door than the one by which we entered, was the fireplace—fit shrine for the Penates of such a household. Its ample circumference, adorned with Dutch tiles—where stout shepherdesses, in hoops and high-heeled shoes, gave sidelong looks of love to kneeling swains in cocked hats and trunk hose; while their dogs and sheep had

grown so much alike from long intimacy as to be scarcely distinguishable. How I loved those little glimpses into pastoral life! I have one of them now which I rescued from the wreck of matter when the house came down. Within the ample jaws of the chimney, which might have swallowed up at a mouthful a century of patent grates, crackled and roared the merry wood-fire—fed with massy logs which it would take two men to lift as men are now—casting its cheerful light as evening drew in on the pannelled walls, bringing out the curious “egg-and-anchor” carvings, which were my special pride and wonder; and flashing back from the mirror globe, which depended from the beam which divided the comfortable low ceiling into two unequal parts. And let me not forget the mantelpiece, adorned with grotesque heads in wood, and clusters of fruit and flowers, of which Grinling Gibbons himself need not have been ashamed. And then the Turkey carpet, covering the breadth but not the length of the room; and the books—the *Spectator’s* short face in his title-page—the original *Tatler*; the first editions of *Pope*; but time would fail me were I to record all the well-remembered contents of that dear old room; the sofa or settee, of narrow capacity, looking as if three single chairs had been rolled into one—the card-table, with its corners for candles, and its pools for fish scooped out of the verdant champaign of green broad cloth. But enough; let us now approach the divinity whose penetralia we have entered, and who well befits such a shrine.

In an elbow chair, at the right of the fireplace, sat my excellent aunt Mrs. Margaret Champion, widow of the Hon. John Champion, long one of His Majesty’s council for this province. When I first remember her, she had passed her seventieth year, and she lived in a green old age till near a hundred winters had passed over her head. What a picture of serene and beautiful old age! Her placid countenance, which a cheerful piety and constitutional philosophy had kept almost unwrinkled; her large black eyes, in which the fires of youth were not yet wholly extinguished; the benevolent smile which was seldom absent from her lips, spoke of a frame on which Time had laid a gentle hand, and of a mind at ease. When I knew her, the profane importunities of the fairer part of her relatives had obtained a reluctant consent to abandon the gently-swell-ing hoop and lowering crape cushion in which she once rejoiced. But you could never have seen how she became her decent white lace cap, her flowing black lace shade, her rich silks for common wear, and her stiff brocades for high solemnities, and not have known that she was a gentlewoman born.

I attribute a good deal of my love of other days to the short winter afternoons and long winter evenings which I sometimes spent along with her. I say *sometimes*, for she was not one of the instances of neglected old age, but her society was courted by young as well as old.

“The general favorite as the general friend.”

My aunt Champion was born not long after the commencement of the last century, and remembered Governor Dudley. The succeeding inhabitants of the old Province House were familiar to her recollection, from Colonel Shute, down to Sir Francis Bernard. She was a staunch Tory, God bless her! and loved the king to her dying day; and thought that no greater men ever lived, at least on this continent, than his Majesty’s re-

presentatives in the province. How well would she touch off the characters of the successive excellencies who in turn did penance in the unthankful office of provincial governor! With what skill (though all unconscious of any) would she individualize them, and bring them body and soul before your eyes. Shute, with his military bluntness and frank sincerity, relieved by a little of the sub-acidity of temper which distinguished Mr. Shandy, and rather too much aptitude to go off at half-cock; Burnet, mild and gentleman-like, fond of pleasure and of elegant letters, and intended by nature and education for a wider and more brilliant sphere, and whose gentle nature was not made of stubborn stuff enough to bear up against the perpetual dropping of the petty vexations which he encountered in his official duties, and the dislike with which his genial propensities were regarded by the sterner religionists of the day. I think that he was my aunt’s favorite; but then his reign was contemporary with her own, and she looked upon him and his court with the eyes of eighteen. Then came Belcher, plain, serious, dignified, whose appearance and conversation indicated a sound judgment and a cultivated mind; but whose character, though acceptable to the colonists as one of themselves, and of interests identical with their own, did not find equal favor with his predecessor in the eyes of a lively young woman, who loved to hear of the court of Anne and George, and of the brilliant constellation of wits which shed its selectest influences in that period of Burnet’s life when he was the chosen companion of Addison, Pope, Steele, and Congreve. Next appeared the elegant, versatile Shirley—intelligent, graceful, full of nice tact, which stood him in good stead in his public as well as private life. He was the only one of the colonial governors who so laid the course of the ship of state as to avail himself both of the tide of royal favor and of the shifting gales of the popular breath, and to keep the helm for nearly eighteen years. His was a glorious reign too.

During his supremacy Louisburg fell: an event ever memorable in New England history. With what interest would my good aunt describe the intense anxiety which filled every heart while the fate of the expedition was uncertain; and then the transports of joy with which the news of its complete and almost unhoped for success was received; the sermons—the illuminations; the oxen roasted whole—the oceans of punch—the broached hogsheads of wine;—for in those days temperance societies were not. Mrs. Champion looked upon this victory as totally eclipsing all the military glories of the revolutionary war—and, indeed, it was not surpassed by any single action of that great struggle; as for Sir William Pepperell, why General Washington was a fool to him.

Then came Pownall, gay, hearty, jovial: whose brilliant balls and gay dinners almost made my dear aunt forgive his leaning to the popular side. His festivity of temper, and the gay coterie with which he had surrounded himself, made her sorry, I am sure, though she would never admit it, when he was removed to make way for the less accommodating nature of Sir Francis Bernard, whose saturnine temperament and impracticable temper made him a suitable lever in the hands of an infatuated ministry to detach, entirely and forever, the American continent from the British empire.

Then how many tales she had to tell of pre-revolutionary festivities—of the old aristocratic families, too many of which are now extinct, or scattered by the revolutionary storm, over foreign lands! And again, there were sadder stories of later days. The bitter scenes which preceded the flight of the tories from their native land; when they stood, a small phalanx, surrounded by a host of the bitterest foes, filled with a jealousy and hatred even surpassing that of warring brothers; and when, the cruellest of all, the flame of discord raged in almost every family, destroying all the charities of domestic life, and alienating fathers from sons and daughters from mothers. And then, when the confident hope which they had entertained of the power of the British government to protect them, at last failed them; when the report, at first disbelieved, and more dreadful than the rebel cannon, was confirmed—that the town was to be evacuated; what consternation filled all their hearts? To stay, would be to encounter the rage of the rebels flushed with victory; to fly, perhaps forever, from all the scenes they loved best, would be to leave their estates to certain confiscation, and to reduce themselves to a miserable dependence on the precarious bounty of the British king. What agonies of indecision! what years of suffering were crowded into those few hours! what heart-breakings, when the most obnoxious resolved on flight! what leave-takings of parents and children, of brothers and sisters, of husbands and wives! what partings—

“Such as press
The life from out young hearts”

of the beloved and the betrothed! Some, alas! never to meet again, and others not till years of sorrow and of hope deferred had changed their countenances and perhaps chilled their hearts.

Then she would tell melancholy tales of how the condition of the refugees was changed from that palmy state which their better days had known; of the neglect they encountered; of the poverty they endured. Some of them, long lingering out a sordid existence in obscure parts of London on the pittance which their royal master allowed them, buried in the utter solitude of a great city. Some ending their days in the king's bench. The most fortunate passing the rest of their lives in an honorable exile, in some petty official station in the pestilential climate of a sugar island.

I do not know whether it is from the sympathy which naturally springs from the contemplation of great reverses in private life, when we are far enough removed from the distorting passions of contemporaries, or whether it is that I caught the infection of my good aunt's enthusiasm, still, though I reverence the fathers of our liberty, and am on principle of the revolutionary side, I must confess that I do love the tories. I am glad that I was not old enough at that time to take an active part on either side of the divisions that then rent society asunder—for I am afraid that I should have been a whig.

Mrs. Champion herself was bound to the soil by too many ties of offspring and kindred to be able to break away. And happy for her it was, or perhaps she would have died of a broken, home-sick heart, like her sister, or perished beneath the sun of Jamaica, like her two brothers, instead of attaining a happy old age,

attended with all that should accompany it, honored even by those who abhorred her loyalty.

The mention of my dear old aunt has led me far away from my theme, but it is hard to check the procession of images which her name conjures up to my imagination. Let us return to the present day, and contemplate one or two of the yet surviving localities of her happier hours, and mourn over those that have vanished.

The old Province House—for about a century the centre of that world which was comprehended within the bounds of Massachusetts Bay—still stands; but how shorn of its beams! After passing through a variety of evil fortunes, it is now an eating-house; and those apartments which, a century ago, beheld the assembled wisdom, wit, and beauty of the province, and witnessed the elegant hospitality of the foremost man of all that little world, now sees nothing but greasy citizens, impatient for their dinner or clamorous for their grog. It still bears some traces of its better days in the iron railings, the freestone steps, and some of the ornaments of its front. It has the air of some ancient gentleman, who, after spending his youth and manhood in a sphere suited to his rank, is reduced in his old age to some unworthy—perhaps menial—condition; whatever may be his employment, and however dilapidated his dress, you feel that he is not in his right place. The old Indian, too, still bends his bow above its roof, and not without his legend which used to tell my wondering boyhood, that at midnight, just as the clock struck twelve, the bow-string twanged, and the shaft sped away into unknown worlds; whither, I neither asked nor cared. I troubled not my head with skeptical inquiries into mysteries which are the province of unseen powers. Its ample courtyard, which had beheld many a military and many a civil pomp, has been long since filled up with a staring row of vulgar modern brick houses; presuming, like some upstarts newly rich, to turn their backs upon their betters. ‘An envious screen! And yet I do not know that it is now more pleasing to the genius of the place to have its wreck of former greatness thus shielded from the common gaze. I think it may save the stout old walls some blushes.

Reader, be pleased to exercise at my bidding that wonder-working power which we all possess, and sweep away that mass of brick and mortar; replant the noble trees; and restore the fine old pile to its pristine splendor. Conjure up the men and boys of a hundred years ago; and, as you love me, forget not the women. It is a lovely day in June. All the world is abroad. The country seems to be superinduced upon the town. It must be some special holiday. It is, indeed, the greatest of the year—always saving and excepting Commencement. It is the feast of the *Ancient and Honorable Artillery Company*, the most ancient military institution in the United States; and which was regarded at its creation with a jealous eye by our prudent ancestors, forewarned by the example “of the Prætorian Band among the Romans and the Knights Templars in Europe.” There they are, drawn up martially before the gate, ready to take up the escort. Their presence has just been intimated to the governor. The door opens, and, surrounded by a splendid cortège, his excellency appears. Observe his collarless scarlet coat richly laced with gold, his embroidered

white satin waistcoat, his scarlet breeches, white silk stockings, high quartered shoes and gold buckles, and neglect not to remark the cut steel handle of his dress sword. Mark with what an old school grace he takes up his cocked hat, and advances bowingly forwards in acknowledgment of the lowered pikes, presented fire-locks, and rolling drums of the citizen soldiers, and the hearty shouts of the gazing crowd. Would that time would serve us to follow the procession to the Old Brick, and listen to a sermon containing matter enough to furnish forth a century of the delicate discourses of our times! Thence we might repair to the well-spread board; and when those rites have been duly solemnized, we might accompany them to the Common, and witness, with a generation long vanished, the ceremonies, of the pomp and circumstance of which we have now but a type. And then, the brilliant evening when His Excellency threw open his doors to a polished and elegant circle unsurpassed at any subsequent period! But something too much of this.

It is about four years since I took a melancholy walk to the North End, to take a last farewell of one of the few historical houses which then survived. I mean the mansion of Governor Hutchinson; a man, whose name will by degrees lose much of the odium with which the unfortunate view which he took of the interests of his country has invested it; and whose faults will be thought, perhaps, by posterity, to have been expiated by his misfortunes. When I arrived, the hand of destruction was already there. The house was disembowelled, the windows gone, and the whole scene presented an air of desolation which would have transported a less vivid imagination than mine to the morning—seventy years since—which succeeded the night disgraceful in our annals, when a brutal and inebriated mob made a ruin of the finest house in the province; and, what was worse, destroyed collections, for the loss of which our history must ever mourn. The political magicians of that day, who foresaw the tempest which was brewing, and thought that they could so direct the storm as to produce only the good effects of a wholesome agitation of the political atmosphere, found too late, that in fostering the mob spirit they had evoked a devil which they could neither control nor lay; and which, once raised, seems like to become the master of their descendants. It will be many years before we shall see another house at all comparable to this one of the last age, either in its architectural excellence or the substantial elegance of its internal economy.

From the ruins of this edifice, and those of one other adjoining house of one of the old tory families—which well deserves a separate essay for its description—have sprung a crop of sixteen fine new brick houses, all stark alike, as if they had been run in the same mould—meaningless, soulless masses of matter. How heavily must their weight lie upon his soul who effected the change! I would not have such a load on my conscience for the world.

Another venerable monument of a former generation has since bowed its head in the dust, and given place also to a crowd of upstart heirs, who perk their common-place, vulgar visages in your face, as if they were of better worth than the noble ancestral stock from which they sprung. It was the residence of Sir

William Phips. That “fair brick house in the Green Lane of North Boston,” which, before the tide of his affairs had turned, he prophetically boasted to his unbelieving spouse that he would one day possess, is for ever gone; and the fine old height, from which it once proudly surveyed the country round, is the abode of a brick-and-mortar monster, compared with which the gerrymander was grace and proportion itself. This stately house, to which the adventurous boy had looked forward as the summit of human hopes when he was keeping sheep at Casco Bay, or wielding the adze and the hammer in one of the shipyards of Boston, was completed after his extraordinary enterprise had been crowned with remarkable success, when the hand of majesty had laid the honor of knighthood on his shoulder, and the poor journeyman mechanic had returned to his native land invested with its highest dignity. It is well that corporations have no souls, or I fear that the one which delivered up this last stronghold of the past into the hands of the Philistines would stand in fearful peril of utter perdition.

There is, however, still standing, an abode of less aristocratic pretensions, but of more illustrious associations, than those just celebrated. It is the house in which Benjamin Franklin spent his early years. It makes the corner of Hanover and Union streets on your right-hand as you go towards the North End from Court street and may be distinguished by a ball protruding as a sign, with the date 1698. I have somewhere seen a letter from Doctor Franklin, in which he says that he was born in this house; but accurate antiquarians, who have carefully investigated the subject, are of opinion that his father did not remove to this house till after the Doctor's birth; which they assert took place in a house (now, of course, demolished,) which stood on the site of Barker's furniture warehouse in Milk-street, a little lower down than the Old South Church on the other side. However this may be, whether Milk-street or Hanover-street may boast of having witnessed the entrance of the great philosopher on the scene which he so long adorned, still we may be sure that those unpretending walls beheld the first dawning of his infant intellect, and were associated with his earliest recollections. It was from that door that the self-complacent urchin issued with his pocket full of coppers on that famous holiday morning when he exchanged all his treasure for the ever-memorable whistle, and with it bought the experience which, comprised within the compass of a proverb, he has added to the stock of the world's wisdom. It was in that cellar that, in his early economy of time, he shocked his worthy progenitor by proposing to have grace said in the lump over the whole barrel of beef which he was putting down, instead of over each piece in detail as it came to the table. Here, too, it was that his father, patriarch-like, sat at his table surrounded by thirteen grown-up children, of which numerous race I believe there is not a single descendant extant—certainly not of the name. It was to this home, too, that young Franklin returned after his successful elopement to Philadelphia, with a fine coat upon his back and money in his pocket—the admiration of his parents and the envy of his brethren. If walls had tongues as well as ears, what histories might not these unfold! Reader, if you are worthy to look upon this hallowed scene, make haste—delay not

your pilgrimage till to-morrow, nor even till after dinner—for, even while I write, its fate may be sealed and its destruction begun. In other countries the roofs which have sheltered less eminent men than Benjamin Franklin, are preserved with filial reverence, and visited with pilgrim devotion. It should be so here.

Both time and patience would fail me, if I were to recount at large the other deeds of destruction which have been worked out within a few years past. The mansion-house of the Faneuils, with its princely courtyard and old French palace-like front, with the grotesque heads grinning from the tops of the windows; the house of the Vassalls, the head-quarters of Lord Percy during the siege, and afterwards the abode of Mrs. Hayley, the sister of John Wilkes, with its hanging gardens terraced to the summit of one of the original peaks of old Trimountain; the hospitable home of the Bowdoin, eloquent of the past—they are all vanished! The very soil on which they stood is removed and cast into the sea.

I have lived long, and seen many changes. The friends of my early years are mostly cold either in death or in estrangement. The grand-daughters of my early loves now reign in their stead. The world is governed by a generation, yet unborn, when my career of active life began. I have seen heresies in politics and in religion usurp the rightful supremacy of the good old orthodox platform. I have witnessed the decline of hoops, the desuetude of powder, the almost total extinction of breeches. The last of the cocked-hats, too, has set forever, and is, like the lost Pleiad, "seen no more below!" I have beheld divinest punch driven forth from the society of polite man, and forced to take refuge in the grogshops! Even Madeira's generous juice have I seen elbowed aside by pretending coxcombs from the south of France and the Rhine! But stay! I take back the disparaging epithet. One is too apt to undervalue the merits of newer friends, when they interfere with the modest claims of long-tried and well-known worth. I will not be unjust to the newer excellence of

"The gay, serene, good-natured Burgundy,
And the fresh fragrant vintage of the Rhine;"

but surely, surely for the solid, serious drinking, that man came into the world to do, Maderia is the only satisfying good.

All these changes, however, have stolen so gradually upon me, that my natural and acquired disinclination to change has not been rudely shocked. The times have changed, and I have changed with them. But the violence that is done to my steadfast nature by the sudden and total demolition of my old companion-walls, the very scenes of my youthful pleasures, is mitigated by no gradual and stealthy approach. The pick-axe enters into my soul. The difficult tug, which in the death grapple can hardly bring the sturdy old walls to the ground, too roughly tears the web of remembered joys. I rejoice to think, that I shall not remain long enough behind to behold the utter extinction of all of my old familiar friends. This roof, at least, under which I write, and which has sheltered more than four generations of my ancestors, will remain to be the abode of my age. It cannot yield to Vandal force, until I have exchanged its friendly shelter for the house appointed for all living.

Boston.

THE PREDICTION AND THE FULFILMENT.*

The dew falls not more gently on the rose,
The moonlight sleeps not sweeter on the wave;
The voice of music and the breath of flowers,
The glorious morn, the purple light of eve,
Come not with more of beauty to the heart,
Than the first thoughts of love. There is a scene
That haunts me daily, and I see therein
A sunny landscape, and three human forms—
—An aged woman gazing on the palm
Of a most lovely maiden, and a youth
Standing apart, and watching the sweet face
Of that fair girl, with fixed and thoughtful eye,
That tells how he has ventured all the wealth
Of his young heart upon the sea of love!
What do they there? That withered crone hath power
To read the lines that fate hath dimly traced
In that soft hand—and thus she weaves her lay:—

"Sweet Maiden! Life hath been to thee, in all thy happy years,

A summer morn upon whose sky no threatening cloud appears;

And not more gently breathe the winds of summer o'er the flowers,

Than o'er thy youthful heart have passed the bright and blessed hours.

A change has come upon thy soul—a thought of deeper bliss,

Than that which haunted thy young dreams of childish happiness;

I know it by thy changing cheek, and by thy faltering tone.

Alas! for thee, fair lady!—that thy heart is not thine own!

For thou hast thrown that pearl away! Alas! proud girl, for thee!

The barque of all thy hopes is launched upon love's stormy sea;

Ah! wo is me! that one so young and beautiful as thou,
Should'st trust so frail and false a thing—a lover's faithless vow.

Forgive me, gentle lady! that my thoughts go thronging back,

Gazing upon thy face, o'er all my life's deserted track.
This sunken cheek was once as fair, this eye as bright as thine,

And O! the love that thrills thy heart were cold compared to mine.

And he was false! I saw him stand beside his chosen bride
And yet my proud heart bore it all, with woman's deathless pride.

I wept not then—I weep not now, but gazing on those eyes,

I cannot choose but sigh to think how love decays and dies.

* Suggested by two pictures, one of which entitled "The Prediction," represents an aged woman reading the fortunes of a beautiful girl in the palm of her hand, while her lover stands listening apart, and in the other, called "The Fulfilment," the truth of the prediction is shown by the union of the lovers at the altar.

But lady! God be praised! I see within thy lovely hand,
A hidden mark that points the way to love's own promised-land.
A brighter fate is thine, for he to whom thy heart is given,
The worship offers at thy shrine, his spirit owes to Heaven.

The future opens to my eyes. I see thee stand beside
The chosen of thy youthful heart, a loved and happy bride;
And far adown thy vale of life I mark thee on thy way,
As beautiful and light of heart as on thy bridal day.

And he whose love thy charms have won, O! cherish like a pearl,
The heart he lavishes on thee, thou proud and glorious girl!
For love in souls like his—though ne'er by time or trial changed,
By one cold look or word, may be forevermore estranged."

She dropped the maiden's hand and went her way,
With wan pale cheek, and weak and trembling step:
I know not if her soul had power to look
Beyond the mists of time, but in my eye
There is another scene, and I behold
The maiden and her lover standing both
Beside the altar, with the man of God,
And they are wed. * *

A JERSEYMAN

IN THE OLD DOMINION.

CHAPTER I.

Who. What. How. Why.

Advanced as the world is at the present day in the knowledge of disease and its remedies—skilled as men have become in the detection and classification of the ailments to which flesh is heir, and in the use of the weapons to be had recourse to in doing battle with them, yet we are led to think that there is one malady, one too of a marked and definite nature, which has altogether escaped notice. It is true that it must often have been observed in its consequent uneasiness, as well as in divers other results; but from some strange lack of attention and research, these have never been traced back to their source, and attributed to a distinct and *sui generis* disorder.

The reader then will pardon us, if, before we enter upon the main subject matter of what we purpose to offer him, we call his attention to the disease in question, since an attack of it, under which we are now suffering, is the efficient cause of our obtruding ourselves upon his notice. Possibly, on hearing the description, a slight effort at recollection may convince him that he has himself labored under like attacks, and thus, from experience, he will be rendered willing to

acknowledge the propriety of another entry on the list of human maladies.

The disease under consideration, is altogether peculiar to travellers, and they are liable to it, in some cases while still journeying, but chiefly, when recently returned from abroad. Some of the distinguished symptoms of the disorder are an universal pruriency and sense of oppression, a peculiar plethora and rubefaction of the cheeks, an unnatural brilliancy of the eye, a strange lingual excitement, together with a decided febrile tendency. All this in some extreme cases is accompanied by a slight delirium, manifesting itself in a neglect of the proprieties of time and place, and in an obtuseness of perception, preventing the discovery of the wishes and feelings of others, though expressed so plainly as to be evident to those free from any such affection. The complaint cannot be said to be a dangerous one, for we have never heard an instance of a fatal termination. It is, however, in many instances extremely disagreeable to the friends of the patient, since, by a singular species of contagious influence, it induces in others a distinct and more unpleasant set of symptoms than those peculiarly its own. For example, it causes a sense of stupor and lassitude, begets nausea and sickness of stomach, and frequently acts as a soporific. Sometimes it has a different effect, occasioning restlessness and eliciting oscitancy and pandiculatory action. These influences, as is evidently natural, render the company of the patient rather a burden. He is liable to be shunned and slighted by his best friends; to be met with indifference and coldness, where he had expected the most lively interest and sympathy. This treatment, strange to say, has a wonderful effect in subduing the disease; indeed, no better remedy can be applied. The quickened pulse soon sinks to its natural sober gait, the blood vesicles of the cheeks become gradually less obstructed, the eyes lose their unwonted fire, and the excitement of the lingual muscles is abated. The patient becomes a well man from a system of practice, which perhaps would curtail the bills of mortality, if oftener applied in other diseases. I mean the withdrawal of all attention, the neglect and desertion of the doctors, the prescription and administering of nothing. This notion will doubtless not comport with the views of the faculty generally, nor, more especially with those of such young practitioners, as may depend for the exercise necessary to skill in their profession, upon the opportunities that may turn up of trying the precise effect of their drugs upon less important patients. But, without cheating the reader of what our title promises him, by delaying, in order to moot the claim of the medical profession to unlimited right, to put sufferers out of their misery, *secundum artem*, we will merely state, that the disease, with which we have now to do, requires nothing for its complete removal but quiet and solitude.

Let us, however, break this net of medical illustration, into which we have fallen, and express the feelings of the returned traveller by a more natural method. They may, we think, be classed under that general tribe of sensation to which the term *L'embarras des richesses* has been happily applied. They are rather a commendable set of feelings, since they bespeak an interest in others, an unwillingness to hoard and monopolize, a peculiar sensitiveness to the idea of remaining

wiser than one's fellows, and an anxiety to add to the common stock of general information. If the compound be dashed with a slight admixture of egotism and desire of admiration, why surely these may be overlooked, neutralized, as they are, by the other excellent ingredients. One very great inconvenience, however, of this sense of responsibility, with which the traveller oppresses himself, leading him to conceive himself bound to empty upon his friends all the stores of description and incident he may have amassed in his journeyings, is, that he is disposed to rate too high the value of his news—to consider the details of his narration several fold more precious than they really are—to claim the premium of attention for that which is many per cent. below par,—in a word, to count that as *capital*, which is productive of no interest. In consequence of this disposition, the whole stock on hand of the returned traveller, without let or reservation, is offered to the luckless wight he may chance to make his auditor, and, if he have no method of escaping the bargain, the whole is forced upon him, without the privilege of choosing or eschewing.

A practical warning deducible from all this is;—beware of the man who is just from abroad,—beware of the man, who, having engaged in travel from no motives of business, but merely for travel's sake, is fresh from the road, with a smile on his lips and a flush on his cheek, indicative of inward fever working to the surface; premonitory, like the rattle of the snake, both of the intention and danger of attack. You may make use of intercourse with such a man to exercise and foster the gift of patience—or to learn the art, sometimes recommended, of skimming the cream of information from the milk and water of dullness; or, again, you may use it for the purpose of self-denial, as the Hindoo does the hook by which he is swung. But if you have no ends like these to answer, avoid such a man—avoid him, though he be your best friend, and, if others follow your example, he will be the sooner a safe companion; avoid him, till repose has given nature time to recover herself, till the trash collected in his cerebellum, has been absorbed and carried off by the intellectual circulation.

The reader may consider this as rather a singular preface and recommendation, for what appears to be the opening of a traveller's budget. And truly, when you look at it in the abstract, it has rather an unprepossessing tendency. However, we can console ourselves, in view of this, by remembering the honesty with which we have forewarned the reader of the traveller's, and of our being slightly smitten with it. We may obviate too, to some extent, the prejudicial effect of the confession, by mentioning the fact, that what we offer to the reader, has undergone a long quarantine in our memory, during which, much worthless and offensive matter, that might have had most to do in exerting the above named contagious influences, has escaped. Nothing, it is evident, has a better effect in purifying a traveller's cargo of news, and in rendering it at all tolerable as an article of trade, than its being anchored out of port for a while. And if, while thus exposed, the waves of oblivion wash over it once and again, no injury will be sustained. Their action does not endanger, at least for a long time, anything weighty or valuable, but merely carries away the lighter and more worthless

trumpery. Without doubt, such would be the tendency of things, if the vessel be at all sea worthy, and the cargo stored with any care, when received on board. What we stored away in our voyage, has been fully submitted to this expurgating process, though perhaps a little note book, that we made supercargo, has, in some degree, exerted an influence in curtailing the operation; in saving things that might well have been left to float off. Indeed, we have at times suspected, and mayhap the reader will ere long suspect, that, if this little officious functionary had thrown up his commission and jumped overboard with all his trust, the literary market would not suffer materially from the loss.

But we may make another remark in our own justification. A traveller is a much less disagreeable personage in print than at your elbow, in *propria persona*. The traveller in print is perfectly at your disposal: you can admit him to audience, or keep him at bay as you please. You can try his powers of interesting you, and if they fail, shut him up in an instant. In a word, you can, with perfect liberty of choice, hear him, or hush him, skim him, or skip him, shelf him, or shave with him, as you see fit. But your *viva voce* traveller is an entirely different affair. There is no such range of choice with him. If you encounter the storm of his talk, you must make up your mind stoically to ride it out—to be as patient as a man of war, when he “heaves to and lets the weather take him” in a gale of wind.

But, without farther preface or exordium, let us introduce to the reader the “*Jerseyman in the Old Dominion*.” A Jerseyman is preëminently calculated to make a good traveller—to observe and be taken with whatever is striking; whether in scenery, resources or character. For, note the peculiarities of his case. No blind attachment to the region of his birth can lead him to believe that Jersey is the richest, the most productive or the most beautiful part of the union. Were he at all disposed to this, the reiterated assertions of his neighbors of the Key-stone and Empire states, that his country is “only fit to be travelled over,” would long ago have driven such disposition from him. To be sure, some few remaining sparks of offended pride and an indisposition to submit too coolly to ridicule, sometimes lead him to rebel against this self-complacent decision; but a recollection of the labor with which each morsel of his nourishment has to be wrung from an unwilling soil,—of the perseverance with which his neighbor farmer has to woo his fields for the faintest smile of recognition,—the least expression of generosity,—soon represses the rising feeling, and leads him to confess:—

A sorry land was made my home,
A sorry land, I ween.

The bearing of all this upon a Jerseyman's character, as a traveller, is manifest. He goes, as we have seen, from a state unquestionably below par, as far as the vegetative principle is concerned; and hence, prepossessed of humble notions, is disposed to do ample justice in this respect. But, moreover, as the state of the vegetative principle of a soil, as a general rule, determines the circumstances of those upon it, he may be expected to be sensitive to every thing splendid or luxurious in life, or to any thing refined or cultivated in character. He goes too from a land where every man lives upon the fruit of his own or his father's labor, and

hence, is well fitted to observe with all the liveliness and clearness of recent impression, the benefits and evils of slavery,—its effect upon the general tone of society, and its influence on the well being of a people;—to trace too the disastrous results of foreign interference, in rivetting the chains of the slave and in adding to the evils of the relation. Furthermore, the Jerseyman goes from a country for the most part* low and level, destitute of bold or magnificent scenery and characterised by sameness, tameness and insipidity. Hence he carries with him an eye fitted to drink in with keen appetite the beauties of nature; to gaze with awe at the frowning grandeur of the mountains, and to look down with rapture at the smiling beauty of the valley.

Let the reader bear all this in mind, and, if in the course of the ensuing random sketches, narration of incidents and slight descriptions, for we intend nothing more serious, he should find us making a mountain of a mole-hill, calling his attention, as a matter of novelty and importance to what he heard when a child, or dwelling in rapture on sights and sounds, which a negro would not look up from a tobacco-hill to pay attention to, his compassion will doubtless lead him to think of us *in situ*, endeavoring to suck a precarious existence from the sand, or straining the eye to reach some terminus of repose on the desert vastness of the Jersey flats.

CHAPTER II.

Array; Equipment; A Horse; From Philadelphia to Washington; Alexandria; Female Ascendancy; Mount Vernon; The Tomb; The House; The Garden; Astray; Occoquan; Dumfries; Acquia; Friends in Need; Fredericksburg.

On the —— of May, 1839, two horsemen were on the road leading south-west from the little village of ———. Their horses had taken that slow, steady trot which indicates patience, and plenty of time and distance ahead in which to exercise that virtue. The faces of the riders doubtless wore a stern determined go-ahead kind of air, and the volubility of their conversation was, it may be, somewhat checked by the anticipation of future satiety and exhaustion in the interchange of ideas. It was a fine spring morning, and a hot sun then beating on their heads warned them of what might be expected at a more advanced season, under a more southern sky. These worthy knights were the reader's most humble servants, the Jerseyman and his *compagnon de voyage*, a gentleman from the west.

Now, according to all the rules of modern narrative, it is absolutely necessary that the entire outfit and appearance of the party should be minutely described—that the exact contour and arrangement of the whole, should be in the mind's eye of whoever chooses to travel over the journey with us. It is true, I do not exactly see the advantage of this,—I do not altogether understand what earthly use it can be to the reader to know whether or not my nag was a piebald horse, or my friend's a dappled mare—whether the encouragement of progression originated with our hands or heels, or in which of Shakspeare's Seven Ages, we ourselves were to be classed. But still, I suppose that Locke's *argumentum ad verecundiam*, may be used to prove that such infor-

mation is highly essential and satisfactory, and, bowing to the authority of custom, private ideas of utility must often submit, and at least a partial account of our equipment must be prepared. I will give the preference in this *exposé* to my companion. The part of his establishment calculated first to arrest the attention of a passer by was his horse, as ugly a little skinny raw-boned scrawny brute of a bay hackney, as a traveller would be apt to admit into his service. He was one of those subdued, woebegone specimens of the horse kind, that look as if it were only their want of mind that bound them to life,—as if a spark of reason would teach them the secret of suicide. His head and neck, poor fellow, were remarkable for a great proportionable redundancy of bone and skin in their composition; his system seeming to have reserved all the fleshy material that it had been able to amass, to supply a scanty distribution of muscle for his lower extremities, where it was chiefly needed for the production and support of motion. Hence, his neck appeared not like a natural and well turned appendage, handsomely joining, or, as it were, merging in his body, but entering abruptly like the prow of a man of war—seeming not to grow out from the beast, in the natural way, but to have been driven in to its place by external percussion. His channelled and angular head was surmounted by a pair of ears, which, being considerably longer, and hence, of necessity, heavier than ordinary, the poor animal seemed not to have nerve and vigor to hold steady; they lolled about at every motion. In addition to all these peculiarities he lacked an eye, and what made the loss more distressing was, that at the point on the eyeless cheek, where we might naturally look for ocular development, was one of the most awful looking cavities that ever dis——, but I will drop this description at the outset, lest it should excite in the reader some of those sensations that the original was calculated to occasion. Surely, no one could have seen that desolate valley, without deeply regretting that its occupant had been, with such evident violence, driven out of it.

It may excite surprise that my companion was willing to ride, or I even to accompany such an animal; there were, however, many things in his favor. His owner recommended him as an unusually safe and hardy traveller, who was so inured to labor that he would grow fat on the service that he would undergo with us; and my comrade was so pleased with this description, which, by the by, I would remark, was afterward fully verified, that he willingly submitted to the evils resulting from ugliness and deformity. However, he was rather sensitive as to the matter of the eye, or rather as to its absence, and used all honest means to make the surviving one answer a double purpose. He was somewhat anxious that I should ride on the deformed side, that he might expose a good ocular arrangement to the right, while I intercepted the view on the left. I was amused with his happy management on one occasion. We were standing, holding our horses by the bridle, talking with a party of friends we had chanced to meet when I observed him carefully presenting the sound eye to the group, in the vain hope of eluding the jokes which had already by others been pretty unsparingly administered. The company discovered the ruse, and made use of it in mixing doses of wit of twofold pungency.

* As is doubtless known, the northern part of Jersey is mountainous and tolerably productive; it grows level and barren, as you approach the sea.

As for my own horse, he rather profited by his comrade's company. The contrast gave him quite a spirited and handsome appearance. He became, strange to say, wonderfully attached to his ugly companion. Whether this was from an inherent respect for age, or a sympathy for the other's distresses, I could not determine; but I had often hard work, when wishing to take a different road for a time, to induce him to leave the old brute. He was evidently rendered uneasy by a moment's separation.

So much then for the *footing on which we stood* in undertaking the journey. Our saddle-bags, pads, &c., which, from the fact that travelling on horseback is hardly ever undertaken in Jersey, are seldom or never seen there, excited a good degree of wonderment, sometimes having the effect, agreeable to some persons but the reverse to others, of filling the doors and windows of the houses with faces, as we rode by. Perhaps as good a method as a traveller can adopt, who is anxious to judge of the populousness of the country through which he passes, or who is fond of seeing faces, or of looking for beauty or deformity of feature or carriage, is to give a *bizarre* or *outré* appearance to some part of his equipage. On this principle, a man without a nose, with a wooden leg, or with any untoward unravelment of body, is apt to see more of the world than his neighbors, who, without any peculiarity of personal arrangement, attract no attention,—are taken for granted, without inspection. However, be this as it may, the style of our equipment, which, at the south, passed unnoticed, had a marked effect upon the Jersey people, often causing an ugly enlargement of the eye, and occasionally eliciting a laugh at our expense. The northern people, as is well known, are proverbial for their eagerness to get to the bottom of every thing,—to know the meaning of any thing singular or out of the way with which they meet. How far this feature of character belongs to the latitude of Jersey, as well as what general impression our outfit made, was in part shown by a young lad, who, among a group of his playmates, had stopped to examine my fixtures, as they remained upon my horse after I had dismounted in a town on our route. "Sir," said he, as I approached, "is that ere the mail?"

As what is to be laid before the reader is *ex professo* an account of the "*Jerseyman in the Old Dominion*," any incidents of travel occurring in states passed through in reaching Virginia, may perhaps be out of place; and indeed all that early part of our journey was very barren of interest or adventure. We may, however, mention the route taken. We rode first to Philadelphia; here as our time was limited and we were anxious to see as much as possible of Virginia, we put our horses on board a steamboat and went down the Delaware to New Castle. From this place we passed on the railroad across the Peninsula, through a part of Delaware and Maryland to Frenchtown. Our horses, strange to say, were carried with the train in a large car partly filled with the baggage crates. This to me was a new leaf turned over in the history of steam. I could give up my horse, without hesitation to be led on board the steamboat; that is comparatively an old fashioned way of doing business. But the idea of shutting him up in a railroad car and whisking him off at the rate of twenty miles the hour struck me as some-

thing rather peculiar. I have repeatedly wondered since, what his feelings must have been when his stable first began to move, how the swiftness of the motion, the thunder of the train and the jar of the floor, on which he stood, affected his nerves and those of his poor old comrade. Surely an animal that would scare at a log or a rock at the road-side, must in such circumstances have had very singular sensations. I really was not a little anxious, when we neared Frenchtown, to see them safe out of their novel quarters, not knowing to what desperate extremities fright and motion might have driven them. Perhaps, however, the ubiquity of the sources of fear held them in equilibrium, and thus kept them quiet. At any rate, the distance was made without harm. Whatever may have been their state at first, time and distance must have pacified them. When the door of their car was opened, they walked out, to all appearance, with nearly as much composure and self-possession, as when led to water from their stable at home.

Arrived at Frenchtown, we took the steamboat again and reached Baltimore by the usual route. In passing, I might mention a little incident that occurred in this city at a livery-stable, where we quartered our horses for a night. My companion in talking a few moments with the owner of the stables, chanced to mention that we were on an equestrian tour. The man, having doubtless never formed any acquaintance with the word *equestrian*, except as used in juxtaposition with the technicalities of the ring, turned aside to a friend of ours, who was in company with us, and asked, if we were *circus riders*. This, when considered in the abstract, was by no means a very flattering query, but still, when our friend afterwards told us of the question, we managed to sustain our pride at about its usual point of elevation, by imputations of ignorance to the livery man.

The day after we reached Baltimore, found us on our way to Washington. The fact that much of the travel between these two cities has been withdrawn from its old channel by the railroad that connects them, as well as the circumstance that the road passes through a section of country whose soil has been worn out, and whose population has, in consequence, been rendered sparse by a wretched system of cultivation, tend to make the ride a very dreary and uninteresting one. It was very evident, that the desolation and barrenness of the country was not its natural condition, but had succeeded a state of fertility and profitable cultivation. Hedges, which long unvisited by the pruning knife, had grown rough and irregular, told of the degeneration of the waste and sterile tracts which they partially enclosed. In one place I remember seeing, at the side of the road, an old iron gate fronting a barren plain, and once probably the entrance to a rich and productive farm. It was really distressing to look at the ruin of land bearing such strong marks of former value, and to feel at the same time that all its desolation was owing to an improvident, reckless system of cultivation. The dreariness of this ride was a good preparative for the interest and beauty of Washington, and we were still farther prepared for the architectural magnificence of the place by a gentleman with whom we met on the road, who told us, with a very *savant* air, that the Capitol was the finest building in the world. Of course,

as Congress was not in session, we saw but few of the human "lions" of the place, and hence were obliged to limit our curiosity to the inspection of the buildings and other things worthy of notice. I will be shrewd enough, however, not to do violence to the reader's love of novelty, by any information drawn from this quarter. Suffice it to say, that no one can look from the dome of the rotundo, without being led to agree heartily with the Portuguese minister, that Washington is "a city of magnificent distances."

Our next stage was Alexandria, a place bearing strong marks of decay and stagnation. Its want of prosperity is, I believe, ascribed to its neighborhood to Washington. The latter, I was told, has almost entirely swallowed up its trade, and, as a consequence, greatly affected its population, which was represented to me as amounting at present to about eight thousand. Its inhabitants however say, that the city is now, to some extent, improving. One effect of its depressed circumstances is worth noting; to some of its citizens it is doubtless a matter of consolation,—a green spot in the general sterility of business and enterprise. I refer to the redundancy of ladies in its population. The fair sex, I am told, have greatly the majority, and, as of course we may infer, they have vastly the upper hand in the city. This, by the by, however, need not necessarily result from superior number, for it is notorious that the ladies often get possession of the mace without such superiority. Be this as it may; the fact in regard to Alexandria is certain, and the mode of its explanation easy. On account of the narrow limits of business in the city, the young men, as they become old enough to take care of themselves, are obliged to seek their fortunes where more room is afforded for profitable employment than at home. Hence the male members of families, are, in great numbers, subtracted from the population; while the females, poor things, not being endowed by custom with equal right to locomotion and enterprise, are obliged to remain behind. This surplus of ladies is an agreeable, though evident feature of decline. It makes a city, like the foliage of an autumn tree, bright and beautiful in its decay.

A few minutes ride south from Alexandria brought us into Virginia, within the limits of obligation by contract to the reader. After some few miles on the Fredericksburg road, we turned off to the left into a by-way to visit Mount Vernon. Some fraction of an hour, perhaps more than this, was passed in reaching an old gateway opening upon the road, which first gave us notice of our vicinity to Washington's seat. Two dilapidated cabins stood at its sides, which originally were probably intended as porters' lodges, but were now sadly out of repair, and appeared to be tenanted by the ordinary negroes of the plantation. We opened the gate, and entered upon a narrow road winding through a wild, untrimmed, unbroken wood. It is not a difficult task for any one of ordinary sensibility to fill with interesting thought and feeling, the minutes occupied in threading that winding avenue in the romantic woods of Mount Vernon. By this path, doubtless, Washington, after bidding adieu to the quiet and endearments and pleasures of home, passed out, when he went to fight his country's battles, to take part in her councils and to execute her laws. And, when worn out

by the toils of war and crowned with the laurels of victory—when wearied with debate, or oppressed with the duties of office, or but just released from place and power, laden with the blessings of a grateful people, this was his path to honorable repose. However there was but little necessity for dulling the edge of impatience by dwelling on such associations as these; a short ride brought us within sight of the old family residence.

I will not undertake a regular and minute description of the place, as this perhaps would be trite and burdensome, but will merely note such matters as interested us most. After tying our horses in front of a low range of cabins occupied by the gardener and other of the negroes, we entered, under the guidance of the wife of the former, a lawn fronting the dwelling. This is an old fashioned frame building, which now would be thought very plain and simple in its architecture, but which in olden time was considered a house for anie laird, I ween. South of the lawn and house were a number of small buildings, whose several destinations were detailed by our negro guide. The fish-house, salt-house, bath-house, carriage-house, &c., I remember among the list she enumerated;—a list, which sufficiently evidenced that the father of his country stood prepared to make such provision for those of his daughter's children who might choose to visit him, as would render such a visit any thing but an act of self-denied devotion to their grandfather. All the out-door arrangements, however, are exceedingly plain, and, in some instances, even exhibit traces of the pinched frugality of the olden time. The bath-house is really a *bijou* of simplicity. Diogenes could scarcely have found fault with it; a mere beehive shed boarded in, a little hencoop of a place, which stands in striking contrast with the airy *lavacra* of a younger date. And yet this humble box, (if indeed it be of no more recent construction than I am led to suppose,) often sheltered one, who has no fellow now. Doubtless he often left it the legacy of the dust and smoke and other circumstances of honorable war.

Before entering the dwelling, we went with the negro woman, who had undertaken to act as our guide, to visit the tomb. The vault, where the remains of the Washington family now lie, is within a small square enclosure, surrounded by a high brick wall. The entrance to this enclosure is by an iron gate fronting and parallel to the door of the vault. On the ground, in the open air, on one side of the short path connecting this door with the outer gate, lies the sarcophagus of Washington, and corresponding to it in situation on the other side, that of Mrs. Washington. In order to afford them some protection from the weather, they are both now covered round with rough board work. Hence all that we saw of the sarcophagi, as we looked through the bars of the gate, was a small part of the white marble appearing through the openings between the boards. This is of course only a temporary arrangement. Small brick arches, meeting the vault on each side of the door and open in front, are to be thrown over each coffin, so that the action of the weather may be guarded against, and yet they may be exposed to view in front.

It will doubtless be remembered that the sarcophagus, which contains the remains of Washington, was

presented by Mr. Strothers, a Philadelphia marble cutter. The lid is a slab of fine marble, ornamented with a most exquisitely sculptured device in relief on its surface, executed by an artist in Mr. Strothers' employ. The reader will perhaps recollect too a legend, doubtless the offspring of some creative imagination, which went the rounds of the public prints, detailing certain strange circumstances connected with the removal of the body. It was said that Mr. Strothers, when the old covering was taken from the coffin containing the remains, was permitted to unscrew the lid of this inmost receptacle and to look upon the dead. The body, we were told, was in perfect preservation, the face, untouched by corruption or decay, was lighted up with a benignant smile, as if, unagitated by any pang or uneasiness of death, the soul had but a moment since plumed it for its distant flight and the body but just settled to its long repose. This was no doubt a delicious morsel for the lovers of romance and sentiment, and, indeed, would be interesting to any one, if it possessed the interest of truth. But unfortunately here it is most essentially deficient. The coffin was opened in presence of a number of the members of the Washington family, and probably by their direction. An old family servant, who was allowed to be with them, assured me that the body was completely decayed. The hair and dust had fallen from the head, exposing the naked skull. It was a singular story; perhaps the figment of a mind revolting at the idea, that a frame, which courage had led to so many battle-fields and crowned after so many victories, which wisdom had seated in supremacy over the councils of a nation of freemen, and wreathed with the laurels of civic honor, should be forced to bow to the vulgar doom and dismembering tyranny of death. But the worm acknowledges no forbidden prey;—decay knows no distinctions, the patriot and the traitor are alike her children.

But before leaving the tomb of Washington, which, with all its associations, ought to render every American, who visits it, at least temporarily, a nobleman in thought and feeling, we might notice a mark, that has been left at this sacred spot, of one of those mean and contemptible traits with which the American character is we fear justly stigmatized,—the distorted and deformed, though perhaps legitimate offspring, of our valued liberty. The outer gate was locked, as of course is proper and necessary, where, in order to gratify the wishes of visitors, the coffin is so exposed. Behind the enclosure, however, rails had been fixed, reaching from a bank to a lower part of the wall. Some one, betraying his disregard of the feelings of the living and his want of reverence for the dead, had by these assistances attempted an *escalade*, in order to attain by this piece of reckless coarseness a nearer approach to the hallowed tomb, and an opportunity of more familiar scrutiny of the sacred resting-place of the dead. I hope I am guilty of no want of patriotic feeling, when I say, that the spirit, of which this act is a result, is one eminently, if not peculiarly American; one too, that in a country, whence the boast has gone abroad that all who live under its laws are noblemen, ought to be scorned by private feeling and frowned down by public opinion. This disposition inquisitively to pry into what is not intended for the eye of strangers; wantonly to set at nought all rules of decency in going and gazing, where

those, who have the right to resent the impertinence, will, it is known, be pained by it without being present, or feeling disposed to confront the rudeness of the intruder, is unworthy of the other noble traits of the American character.

Akin to this is the disposition, that has been evidenced in another part of the union, in the conduct of the people toward a distinguished foreigner,* who, an exile from his country, has taken refuge in ours. His generosity and amenity of disposition have made him the friend of every one, that can appreciate worth and nobility of character. Wealth and taste enabled him to erect in the neighborhood of a pleasant village a fine country seat, and to render the grounds around inviting and ornamental. These he threw open to the visits of all who might care to see them. In return for the favor, the vandal spirit of his adopted countrymen has been abundantly manifested in defacing and injuring whatever could be reached with the knife, or the pencil. During his temporary absences, the fine statues and other ornaments of his walks and lawns, were so battered and spoiled, that he was obliged to take them within doors out of the reach of his worthy guests. At a late visit to his place, I saw a door of an observatory, one of the few things left at a convenient distance from the house, that afforded a proper color and surface for the pencil, completely bespattered with names, low ribaldry, tap-room jests, and (*O mores*) mockery at fallen greatness. So much for the honor, decency and most glorious liberty of the noblest nation that the sun in his circuit smiles upon!

But, perhaps, the reader would be quite as well satisfied, were we to drop the censor and attend to our more legitimate duty. A few rods from the place where the family remains are now deposited, is the old vault. Its site was selected by General Washington himself; at his death he was buried within it, and it remained his grave until his body was removed by Mr. Strothers to its present resting place. This old tomb is situated in a grove of fine trees, a short distance from the house. It is an exceedingly simple, even a rude piece of architecture, consisting merely of a small excavation in the earth, built around with stone and covered with a mound, in which several small trees are rooted. The entrance is by a door in the side. The whole structure is a monument of republican simplicity, and is calculated to affect the visitor with a strong desire that it might remain proof against the ravages of time, that future generations, advanced still farther in refinement and luxury than we, might see how distinct splendor is from worth,—how narrow and rude a bed greatness could spread for its long repose. But alas! its very simplicity will make it but a short-lived monument. The hand of time, unrepelled by the care and attention of the living, is even now upon it, sapping the supports of the mound, mouldering the wall and filling the empty cell. A future day will not know the place made sacred by the choice and burial of Washington.

On returning from the tombs, we entered the house under the guidance of an old family servant. We were told, that all the furniture belonging to General Washington had been long since removed; there

* Joseph Buonaparte, ex-king of Spain, resident at Bordentown, New-Jersey.

were however a few moveable relics of his original establishment remaining. The first thing to which our attention was directed on entering the hall, was a large and singularly formed iron key, hanging against the wall, enclosed in a small glass case. When La Fayette, at the head of the National Guards of France, took and destroyed the Bastille, he retained its key in his possession—and afterwards, when in America, gave it to Washington. Here it was hanging in the case. The sight of it less than a century ago would have made a Frenchman shudder, would have scared him with visions of darkness and chains and torture and death. At Mount Vernon, it serves as a striking memorial of the value of those republican institutions, which its owner gave us; an American should look upon it with feelings only of exultation and gratitude.

We were shown into all the rooms on the lower floor of the house. In one, which we entered, was a beautifully carved mantle of fine variegated marble, a present from La Fayette. Several of the rooms were hung with pictures, among which I noticed a portrait of Washington on china, which is said to have been cut, or broken out of the side of a pitcher. It was mounted in a handsome frame, and I believe is considered an excellent likeness. The study, which we last visited, contains the library, which was considerably increased by Judge Bushrod Washington, the General's nephew and his successor at Mount Vernon. Against the wall is a portrait of an elder brother, by whom the house was first occupied, and with whom Washington lived before his marriage.

On leaving the house, which is so far divested of its original furniture, and so far altered in its internal arrangement by subsequent occupants, as to excite little interest, except as regards the general association, we entered the garden under the guidance of the ebony functionary, who presided over that department. It is surprising that this part of the establishment, which one would suppose would retain fewer traces of its original plan than the others, should have preserved so far its first arrangement. This is in a great measure owing to some edgings of box, that border and define the beds, and which the negro man told us were planted in Washington's time, by a Dutch gardener in his employ. By the by, this same Dutch gardener must have been quite a character. The old man, who was with us and who had been very careful to tell us that he had learnt his trade of his foreign predecessor, showed us a recommendation, which this personage had brought with him from Germany, and which had been the means of securing him a place at Mount Vernon. It really was a curious old document, drawn on parchment, now soiled and greasy with age and repeated inspection, written in German, with German text,—bedazzled and besprinkled, in the usual Dutch taste, with all kinds of flowers and flourishes, indicative, I reckon, of the efflorescence and luxuriousness always attending the efforts of this said knight of the spade and rake. It carried with it *prima facie* evidence of respectability, was attended with the affidavits of sundry great names,—perhaps of the lords and ladies of some one of the petty German principalities, and had doubtless an inevitable tendency to set its owner at work after his immigration, as any bit of sheep-skin of equal size, that he could bring from abroad.

His successor seemed to take peculiar pleasure in exhibiting this, to him, hieroglyphic testimonial of his teacher's ability. Perhaps he flattered himself with the idea, that what is a recommendation of a master, must, of necessity, answer equally well for his apprentice,—that his color had occasioned no impediment to his full and satisfactory acquisition of as perfect a system of German horticulture, as the parchment instrument in question proved his teacher to possess. This at least I must do him the credit to say, that he seemed throughout, in the performance of his office, to have "walked in the steps of his illustrious predecessor." Indeed, a different course was scarcely practicable, without serious injury to the beds, since the above mentioned box-edgings, winding, at the sides of the paths, through the garden, necessarily restricted him to such procedure.

I must confess, however, that one part of the old gentleman's polity was rather grating to the feelings. He told us that he made it a practice to sell flowers and shrubs to such visitors who might choose to buy of him. This really struck me as rather unseemly, to drive a petty trade in the produce of the beds, in some cases, of the very plants that General Washington had cultivated, and that too for the very reason of their having been his beds and plants. Relics from such a source are surely invested with too much dignity and value to be bartered for a few shillings. The gardener told us that such were his orders, and that the money was devoted to the support of the place. This, however, I cannot but surmise to be a yarn of the old man's special fabrication, to incite us to supply him with tobacco and pipe money. It surely can't be done with consent and by authority; for every one must see the revulsion it must cause in a visitor's feelings. What would a foreigner think of us, if, on going to Mount Vernon, he were offered for some paltry sum a flower to dry in his note book to the memory of Washington, and were told that the heirs and assigns of this great man eked out their living by the sale of such relics. This is the only fault I have to find with the old gardener's *menage*, and really I would suggest it as a matter worthy of restraint and limitation.

At the side of the garden and forming part of its enclosure, are the ruins of the green-house, which was burnt down a year or more ago. Many of the plants were saved from the fire, and no other green-house having been provided him, the old negro had been nursing them through the winter in another old building, which he had fitted up temporarily for the purpose. They were now standing out in the sun in front of their winter quarters. Some of them looked exceedingly old and weather-beaten, as if they had been alive in the war time and had borne the common trouble and hardship of the revolution. The gardener pointed out to me an old orange tree and another plant, I think an *eloe*, which had been in the green-house in General Washington's time. The latter bore the marks of extreme age. Though it had been much injured by the fire, it was sprouting strongly again, and as it belongs to a very long-lived family of plants, it may doubtless be looked on as a representative of revolutionary times some twenty or thirty years to come. I was also indebted to the same worthy representative of the colored race for showing me an old decayed barkless trunk of a cherry tree, for which he claimed an exceedingly

remote antiquity. He placed the youth of the tree I forget how far back. It may, for aught I know, have been a twig when the elder Washington was a boy. It had an exceedingly venerable appearance, and, though sapless and branchless, it seemed to have been spared as a kind of family memorial.

The old negro, in giving me the history of divers matters and events connected with the establishment, once or twice chronologized his narration by referring to the time, when the "Ginnerl took place." This, at least, was the way in which I understood his expression. I concluded that he referred to the era, which, in common parlance, we would call, General Washington's time; though to be sure this was rather an indefinite specification. Yet still, I thought that the poor fellow had perhaps heard of wars and marriages taking place, and thought that, as a consequence, he might speak of Ginnerl Washington's taking place, not only with perfect propriety, but with rather rare elegance. However, unfortunately for my self-gratulation in having thus encountered something to laugh at, I found that I had not heard an interposed article, which the negro had, though slurringly, supplied. His epoch was much more specific,—“the time the Ginnerl took de place,” i. e. Mount Vernon.

The old cherry trunk aforementioned, was about the *ultimum visum* of our visit. We mounted our horses and turned their heads to rethread the path winding through the woods to the outer gate of the plantation. One of the few unpleasant feelings that came over me, as we rode away, resulted from the air of decay, I will not be so uncharitable as to say, of neglect, which was visible throughout the place. It really is a matter greatly to be deplored, that a spot so sacred—around which cluster so many associations connected with the suffering and sorrow, success and glory of our country, should ever be blighted and desolated by the hand of Time,—that objects which, by reviving the memory of greatness, are calculated to encourage the patriot's heart and to palsy the traitor's arm, should ever be given over from neglect or by necessity to the ravages of decay, to moulder and be forgotten. I have often been impressed with the idea, whether reasonable or no may perhaps be doubted, that this subject is worthy the attention of the country. A few years ago, it will be remembered, the government applied for permission to remove the remains of Washington to the capital. This proposal was declined by the family. They preferred that the honored dead should lie entombed with his kindred. Now, in order to attain the same end then desired,—in order to cherish the memory of Washington, would it be impracticable for government to purchase Mount Vernon? They might then restore as far as possible all its old arrangements, prop up its mouldering honors,—call back its waning beauty, and thus make it a worthy memorial of the dead, whose life it nourished and delighted, and whose sepulchre it embosoms. The Russians, among their innumerable palaces of splendor and magnificence, take pride in defending against the attacks of time the little wood cottage that was the home of Peter, their best and greatest Czar. And, though Russia is no source for us to have recourse to for example or suggestion, yet here, I think, is a precedent both interesting and worthy of imitation. I would be no advocate for a sickly sentimentality, that

would weep over a relic, or brood with yellow melancholy over the conquests of decay. Yet I would advocate honor to the great,—I do approve of cherishing, by association, as well as by recollection, the memory of departed worth. I would rejoice in any effort, whether public or private, to hold back the ebbing tide at Mount Vernon, and to continue it an interesting and hallowed shrine for the pilgrimages of a grateful people. I might add too that the frequency of visits, makes it more properly an object of governmental care, since it is thereby rendered an unpleasant place of private residence, and I imagine that it is chiefly on this account that it is used as such, but about two months of the year. The constant intrusion of strangers, though expected and doubtless considered an honor by the family, is nevertheless a great evil, as it regards domestic privacy and comfort. This should serve in a great measure to do away any reluctance that may exist to entrust to public care that which must necessarily be so far sacrificed to public feeling.

However, I have lately met somewhere with the sentiment that digression is a piece of immorality. Whether we are to consider it is as equivalent to deception, or the fruit of malice prepense, I will not attempt to determine; but will acknowledge the addition to my ethical code and hasten back to the path of duty. It is much easier however to get back into this path, than from Mount Vernon to regain the main Fredericksburg road. The rough, winding, illegible way that was to lead us to it, was so hard to thread, on account of its irregularity and numerous branches, that no dint of inquiry of the few we met and no depth of study of likelihoods and probabilities could prevent us from twice losing our way. The last time we met with this mishap, our error was so serious, and, from lack of opportunity to gain information, so long continued, that we became completely mazed in the paths of a rough wood, and were glad to purchase the services of a negro boy from a house we met with, to be our pilot to the road. One at all familiar with the peculiar sensations of discomfort resulting from such bewilderments, or the least aware of the anxieties and irritations of travel through a thinly settled region, where the path is wild and green, has a hundred brothers forking from it and no houses by its side to give opportunity of learning where you are going, will sympathize with us in our feelings of complacency, when once more enjoying the carelessness and confidence of a dusty, grassless and *bevoelkert* road. A few miles of such enjoyment brought us to the little village of Occoquan, as pretty a place as I saw in all Eastern Virginia. It is situated on the Occoquan, just at the mouth of a beautiful gorge, which this river forms, in cutting its way through a range of mountains, which range across it at this point. The scenery can hardly be called grand, at least in comparison with what we afterwards saw in other parts of the state; but in a region so flat and sterile, so barren of magnificence and of fine prospect, you are prepared to overrate the beauty of the place by the want of interest in your previous ride. And, when you continue your journey and encounter the desolation of the road beyond, the eye of your imagination goes back and stations itself on the bridge opposite the town, looks up the gorge, rests upon the stream checkered with rocks and miniature islands and whitened with

the foam of its narrows and its rapids,—sees the cliffs on either side, here mantled in green and there looking over into the current with dark and sullen frown, and you are confirmed in the belief of the beauty of the scenery of Occoquan.

The main artificial attraction and probably the nucleus of the place is a fine mill, which, from its size and the hum and whiz of its interior arrangements, induced me to believe that very abundant advantage was taken within it of the divisibility of matter. The miller has the finest house, and is doubtless the most conspicuous man, the leader of the *ton* in the place. Peradventure the younger boys, from constant ocular experience of the dignity conferred by milling, and from a view of the relative standing of the citizens, look upon a miller as the *finisterre* of civilization,—the *ne plus ultra* of gentility, upon mealy clothes as the *sine quâ non* of a gentleman.

After passing a noon at the tavern of the village, we mounted our horses and began again to lessen the distance to Fredericksburg. I might stop here to remark upon the sterility of the country through which we passed, upon its worn out soil and the consequent dullness and dreariness of our ride. But, if I were to attempt to chronicle all that we saw of barrenness and desolation, of ruin and decay along our route through Eastern Virginia, much of my narration would be occupied with descriptions of sombre hue and doleful coloring,—with legends of laziness and short-sightedness and reckless imposition upon the soil,—with philippics against the driving of shallow ploughs and the culture of tobacco. I will therefore be sagacious enough to avoid souring my whole relation with notices of every wretched farm and worthless common that we passed, thus spicing all I might say with the acrimony of complaint and the discordancy of reproach. For it is a fact that cannot be denied or modified, that the Eastern Virginians, whatever honor or commendation they may deserve in other matters, have converted a country which in olden time was fertile as a garden and capable of supporting in comfort and plenty a dense population, into a home of dearth and barrenness,—a soil, which, worn out and weary with unrequited and rude demands on its liberality, now refuses the applications of a lazy and misguided husbandry, and is recalled to its original generosity by no importunity of man and by no genial influences from the cloud or sun. Unwilling at each advance in our ride, to excite in the reader, as were excited in us, feelings of sorrow for the wreck of a once luxuriant country and a disposition to vituperate the improvident system of culture, which originated and still perpetuates the evil, we will perform this part of our journey without calling attention to the tame scenery or the barren fields. At some convenient season I will bring together and utter in one category all that I have to say in regard to the agriculture of the Old Dominion,—in regard to the cause, remedy, shame, sin, and folly of the metamorphosis of rich and fertile plains into desolate and desert wastes.

Meanwhile our horses, with their steady trot, have worn away the few miles that separated us from our night's lodging at Dumfries. This little town, though now exhibiting all the marks of extreme poverty and decay, was once, we heard, thriving and prosperous. Indeed we were told, I know not with how much truth,

though it is a very probable story, that there was a time in the early history of the state, when this little town did more business than Baltimore. The tradition proves, at least, the antiquity of the place, if nothing else. But, while the rival has proved herself a genuine child of America, by her healthy and rapid and still continued growth, this her reputed elder sister enjoyed but the health of infancy; her subsequent life has been marked by the feebleness and dwarfishness and emaciation of premature old age.

The tavern at which we lodged, afforded abundant evidence that the place had seen better days. It is large and arranged on an extensive scale, and exhibits every mark of having been built to supply a demand for far more accommodation, than is now ever needed at Dumfries. It no doubt has often been the home of wassail and of wine, when the neighboring yeomen could find material for dreams of wealth and prosperity. Its large empty rooms, whose smoky walls and broken windows now tell of meager revenue, no doubt once rang with laugh and song, when the hopes of the honest burghers were young and they knew whence the silver was to come to pay mine host for the liquor that warmed their brains. The number of its patrons in the palmy days of Dumfries is evinced by its high stone steps, which, as I observed, were worn and furrowed by the constant tread of visitors. The causes of all this degeneration and decay, are doubtless the withdrawal of trade to more eligible towns, the unhealthiness of the country and the increasing poverty and worthlessness of the soil for miles around.

As may be supposed, we felt no disposition to while away at Dumfries more time than was positively necessary for the purposes of supper and lodging; and if I remember correctly, ample means were afforded us of attending to both these duties very satisfactorily. I can find no fault with Dumfries tavern as a lodging place; its whole air and arrangement favor repose. There is so much stagnation and want of life in the town, that no neighboring noises, indicative of thrift and activity disturb the traveller's rest; and, alas! for the blue nose and solemn countenance of mine host, no money-producing bustle, within doors, rose from the bar or hall to interrupt our slumbers. It was a fine opportunity to study the nature and intrinsic essence of silence, its physical effects upon the frame and the consequences of the presence of no reverberation in the ear,—the temporary death and torpor of one of the senses. But, though Dumfries has hardly strength and power of lungs remaining to make much noise in the world, yet still it has many things in common with other towns and villages. For example, the sun rises upon it about in the same way that it does elsewhere. This fact came to our knowledge in the regular course of events, when we had finished our offerings at the shrine of Morpheus; and soon after the discovery we made use of the phenomenon, to mount our horses and seek an appetite for breakfast in cutting off, by a fresh *inroad*, a slice of the distance to Fredericksburg.

After nine miles, we stopped to breakfast at Aquia, a place still more wretchedly ruinous and dilapidated than Dumfries. It bore every mark of extreme and increasing decay. I was surprised at this, for it struck me that so small a village, even if possessed of no manu-

facturing advantage, or facilities for trade, could still support itself in better condition than it exhibited merely as a residence for laborers, or on so public and important a road, by means of its store and tavern, each of which it contained in an impoverished condition. A keg of epsom salts on the counter of the store might, however, have served to suggest a solution of the mystery. Struck with the portentous size of the keg and with the amount of material for this interesting beverage, I was led to ask the shop-boy how they came to provide such a quantity and whether it would not be apt to lay long on hand. He assured me that it was by no means an ill-advised purchase, and that, judging of the future by the past, it would all be sold within a few—I forget the precise number of months. I found upon inquiry that the cause of the decay of the place is its extreme sickness,—that at one season of the year it is visited by very prevalent and most fatal fever,—that in the month of August the town is almost depopulated. It seems that a removal to the distance of half a mile, in some directions from the village, is enough to place an inhabitant out of the reach of the morbid miasmata. Hence the white people of the place leave it at the sickly season, and the blacks, some of them, remain alone. I was astonished at finding that the negroes were by no means so much exposed to danger from the fever,—that they stayed there during the most pestilential state of the air, very generally with impunity. My feelings of surprise now underwent a complete revolution. Before, I had wondered at the ruin of the town; now, my wonder was still more excited that it was not a heap of ruins. What, on earth, I thought, could induce a man possessed at all of the power of locomotion, to remain in such a wretched little kennel, without any visible attraction or facility of living, and with the yearly returning necessity of a troublesome change of quarters, or of running a gauntlet with a most virulent form of bilious fever. The *éclaircissement* of this new shade of the mystery was not so easy as of its first phase. However, the villagers told me in self defence that there they had houses ready built,—built I suppose either before the spot became so unhealthy, or, at least, before the danger was known,—whereas a removal would involve the necessity of sacrificing these dwellings and providing themselves with others. But really a man must be very far gone in poverty and very far gone too in doubt of his ability to maintain himself, to live in such a hole, with the usual walking facilities, and the wide world before him.

Poor Acquia had at the time we passed through it, a new evil to contend with in addition to the prospect of the sickly season. Corn was selling at one dollar and a half a bushel, which by no means quadrated with the peculiar situation of its exchequer. We learnt that one important means of supply was by an exchange for grain of fish caught in the Potomac, within a few miles of the village. Corn had been so scarce that but about twenty bushels had been brought down the river to be given in this exchange. This had worked wrong for the poor Acquiars.

In the hands of the kind landlady who gave us our breakfast I left my umbrella through an unfortunate though happily time forgetfulness, and, when afterwards, in clear weather, I congratulated myself on relief from its weight, and in the rain, regretted its absent

shelter, I was glad that my memory had selected so proper an occasion to betray its trust, so that the article forgotten had become a trifling comfort to the poor old landlady of Acquia, in the pertinacious integrity of her viands and the imperturbed composure of her beds. However there are times, as the sequel will show, when such a loss makes itself felt,—when a man is driven by mere stress of weather to feel the vital efficacy of umbrellas,—the great convenience of having some extent of silk to interpose between skin and sky.

Again in the saddle, we rode on through the same tame, uninteresting country, which, with little interruption, we had seen round us ever since entering the state at Alexandria, and which afforded nothing of scenery or incident worth laying before the reader. However, there is a little story of Virginia hospitality connected with this stage of our journey, which it may not be amiss to chronicle, were it but to confirm the fact, that, if the Eastern Virginians have not the best soil, or the best idea of agriculture in the world, they go far toward making it up by the goodness of their hearts. Our stopping place at noon was to have been a *private entertainment*, as the Virginians call a small country tavern, not much overrun with business, and, as I concluded, not licensed to sell liquor. This last characteristic is I suppose, the specific distinction in the case; for we met afterward with many public houses thus designated, and found no difference from the ordinary country tavern, as far as regards universal reception of travellers and the provision of the usual accommodation. Be this as it may, we were to stop at noon at a certain *private entertainment*, to which we had been recommended. When we reached it, however, and were about to dismount at the door, with the expectation of rest and refreshment, the landlady made her appearance, and told us, to our no small chagrin, that her husband had gone from home and had inadvertently taken the barn key with him in his pocket. I suppose the poor fellow had so few demands on his services, that he had almost lost sight of the necessity of making provision for a chance visitor in his absence. However, here we were; we could have *ad libitum* all that was necessary for ourselves, but as what our horses were interested in was all within the logs of the barn, and, furthermore, as they had seen nothing in the way of hay or grain since we left Dumfries, it was evident we must go elsewhere. But then unfortunately there was no tavern beyond short of the Rappahannock, and that was too far both for ourselves and horses. Here was ample material for a quandary. The landlady proposed this method of extrication. She told us that about a mile ahead, near the road, a family lived named C—, who, if we stated our case to them, she had no doubt would gladly afford us the requisite entertainment. Well this was rather disagreeable, but still, as it seemed our only resource, we determined to put their hospitality to the proof. We accordingly turned our horses again into the road and fell to work to despatch the intervening mile. We soon were in sight of the house, rode up, presented our petition, were most kindly received, our horses were fed and we ourselves invited to dine with the family.

Our hosts were plain farmers, simply clad, of the sturdy yeomanry of the Old Dominion. With three young men, the sons of the kind old lady, who receiv-

ed us, I was exceedingly pleased. If they may serve as a model of their class in that section of the state, I must commend the good breeding, intelligence, manliness, and kind feeling of the young farmers of Eastern Virginia; I must do honor to their freedom from boorish sheepishness, as well as from the contrary still more disagreeable trait so common in our New England states,—impudent inquisitiveness and a hungry eagerness to reap from questions and scrutiny a stranger's circumstances and purposes. On conversing with them, I found them much interested and quite at home in the subject of Virginia politics. I discovered that they were strongly prejudiced in favor of the present administration, and that they had been much interested, though displeased, with the recent course of Mr. Rives. They spoke of him as a man of great ability, and as once possessed of so much influence with his former party, that, had he remained within their ranks, he would in their opinion, have been some day a candidate for the Presidency. Now, they held him to be entirely ruined as a statesman, and one of them, who had seen him recently, insisted that a dejected and haggard air, betrayed his consciousness of his own political undoing.* These sentiments, which, by the by, we will not infringe upon the necessary and proper neutral character of a literary journal, by either endorsing or condemning, were expressed with much intelligence, frankness and manifest interest.

Notwithstanding all the mischiefs resulting from the strifes and agitation of party, notwithstanding all the temptations to corruption and political chicanery, which they necessarily involve, I am by no means convinced that well defined and wide distinctions of party are not all important to the strength and well being of a country. They agitate and preserve from impurity and stagnation the popular sen, they foster public intelligence and keep alive a spirit of eager inquiry and of free discussion, they tend to feed the patriotism of all not personally interested in political questions, they create and foster among the people an interest in the government and a consequent disposition to regulate and hold in restraint, by a wholesome censorship, the actions of their public servants.

But, alackaday! for our supplementary principle of ethics! Where were we, when we fell into this dull disquisition? Let us get hold of the thread of our story.

With all the benevolent feeling that rest and refreshment and hospitable treatment naturally occasion, we prepared to pursue our journey. It is perhaps unnecessary to say, that the family, though apparently by no means overburdened with wealth, would receive no manner of compensation. Thanks and kind wishes

* NOTE BY THE EDITOR.

Having shown the proof sheet of the foregoing passage to a friend at our elbow—he remarked somewhat jocosely, that the young farmers referred to, might possess very “good breeding, intelligence and manliness,”—and yet entertain very crude notions of either the duties or probable fortunes of a statesman—and that, so far from the honorable ex-senator referred to, having “a haggard and dejected air”—he, our friend, had lately the pleasure of seeing and conversing with him, and that no one could have exhibited a countenance of more undisturbed tranquillity.

were all we could return, and upon tendering these with a good degree of earnestness and with no manner of let or reservation, we found ourselves again in the saddle and on the road. After an hour or thereabout of steady trotting, now made very supportable by the requisite personal and animal reflection, we crossed the Rappahannock and were in Fredericksburg,—the city of the Unfinished Monument.

And now, as our first week of travel is nearly spent,—as we are sheltered from Saturday's western sun by a comfortable hotel, in a pleasant city, here will be a point of repose grateful to ourselves and peradventure more grateful to the reader.

ITALY.

I saw a maiden stand one summer eve,
Gazing in silence on the golden clouds
That floated in the sky, till, one by one,
The first bright stars came forth, and the soft light
Of evening faded like a dream away.
—She gazed—but yet she heeded not the clouds,
Nor the sweet sunset, nor the coming stars.
Her heart was far away, and as her thoughts
Spoke through her eyes in tears, her spirit sang :—

“In thy sweet land, O! Italy! I dwell in all my dreams,
Thy sun upon my heart hath poured the radiance of its beams;
I see the beauty that thy skies, at morn and evening wear,
And hear the soft and melting strains that float upon thy air;
The wind steals o'er me, laden with the incense of thy flowers,
And I gaze upon thy lofty domes and on thy marble towers.

“They say our skies are beautiful—and that our sun is bright,
That sweetly from the blue of Heaven, the moon looks down
at night;
They say that all our vailles smile with gaily blooming flowers,
And that the trees of Italy are not more green than ours.
But since, O bright and blessed land! my heart hath dreamed
of thee,
Our sun, and moon, and gentle flowers are sad and dark to me.

“’Tis not that fairer, lovelier forms and brighter eyes are thine,
For beautiful forms are 'round us here, and bright eyes softly
shine;
’Tis not that love more constant there, doth mock the flight of
time,
For the boundless love of the human heart is the joy of our own
proud clime;
And I know that I should sigh to leave the friends of my happy
home,
Amid thy groves and fragrant bowers forever more to roam.

“But Italy! sweet Italy!—thou bearest on thy breast
The footprints of a mighty race, whose hearts are now at rest.
Thy noble dead are with us, as we gaze upon thy sky,
And though we see them not, we feel their memory cannot die;
And our spirits burn within us, and our eyes are dimmed with
tears,
As back are wafted to our thoughts the scenes of buried years.

“For these I love thee, Italy!—but not alone for these;
Thy balmy air—thy summer sun—thy darkly heaving seas,
Thy deep unfathomed sky—thy clouds, that spread their wings
above,
Have haunted me in visions, till they won my spirit's love,—
And now I seem in all my dreams to sail along thy shore,
And I hear the breaking waters and the lightly dipping oar.”

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE VII.

SUPERIOR SENTIMENTS.

I now come to what are called the *Superior Sentiments*, or such as constitute the peculiarly human character. Of these, however, Benevolence and Imitation are found also in the inferior animals. The best rule for ascertaining the size of the coronal region, the seat of these sentiments, is the following: The centre of Causality corresponds to the point of ossification in the frontal bone, and the centre of Cautiousness to the point of ossification in the parietal bone, and all that part of the head which lies above these points belongs to the Moral Sentiments, allowing a little for Causality and a little for Cautiousness. Pass a string, therefore, round the head over these points, and if that part of the head which lies above a plane, of which this string is the boundary, be low and flat, you may rest assured that the Moral Sentiments are small; if it be high and broad, you may be certain that they are large. I shall now treat of the individual organs, and first of

BENEVOLENCE.

This organ is situated at the fore part of the top of the head, on each side of the middle line, and anterior to the fontanel. This is a representation of the brain and skull of Gottfried, the murderer, and this of Eustache, a most benevolent Negro; you perceive the great difference of development in this region. A friend of Gall, knowing that he sought external manifestations of mental qualities, requested him to examine the head of a servant remarkable for his amiable disposition and goodness of heart, as it is called. "It is impossible," said he, "to find a greater degree of goodness than that young man possesses." Gall complied with the request, and perceived a prominence of the frontal bone. He recollected a school-mate who had the like amiable temper: and he was requested by a lady to examine the head of her son, also very amiable. He found all their heads most developed in this region, though different every where else; and by examination of others, he was convinced that the disposition to do good was innate, and that here was its organ.

St. Paul beautifully describes this sentiment under the name of Charity: "Charity," says he, "suffereth long and is kind; Charity envieth not; Charity vaunteth not itself—is not puffed up." This organ prompts to acts like that of the Good Samaritan. It is distinct from Love of Approbation; for those who have it large do good without regard to fame, and do not complain of ingratitude; they manifest a warmth and simplicity of manners, and a directness of purpose which touch the heart at once: while those who do good from love of approbation seek witnesses, boast of their goodness, and evince a coldness and restraint which betray their true feelings. See how large it is in Henry IV. of France, and beautifully did he manifest it in his character. When urged to injure an officer who had taken part against him, he replied, "I will do him so much good that he will be forced to love me." When urged to destroy a town which he had conquered, he replied, "The pleasure which results from gratified revenge lasts but for a moment; that which flows from mercy is eternal." Fenelon exhibited a most beautiful manifestation of it when he said, "I am a true Frenchman, and love my country; but I love mankind better than my country." Hobbes denies there is such a sentiment, and resolves its manifestation into selfishness. Pleasure indeed is, by a beautiful arrangement of the Creator, made a concomitant of benevolent acts, but it is not for the pleasure that the acts are performed. The man who sees another fall into the water and leaps in to save him, must feel great delight in preserving his fellow from drowning; but not for this delight did he risk his own life.

The organ is very distinctly developed in the head of Jacob Jarvis, of Cork, who could never resist any solicitation. This was soon discovered by his acquaintances, and they obtained from him any thing for which they chose to ask; till at length his wife, when she saw any one coming whom she supposed

about to request something, had to lock the door, or he had to hide himself. The organ is extremely developed in this, the head of the negro Eustache, whose merits were publicly acknowledged by the Institute of France, when in 1832, he received the Prize of Virtue. During the insurrection of the Blacks at St. Domingo, the disinterested exertions of Eustache in behalf of his master, Mr. Belin, were unbounded. By his address, courage, and devotion, this gentleman, with upwards of four hundred other Whites, were saved from the general massacre, and the fortune of Mr. Belin several times preserved. At Paris he was always doing good: the profits of his industry and the rewards which he obtained were all employed in relieving the miserable. At Port au Prince, Eustache often heard his master, who was an old man, deplore the gradual weakening of his eyes. Eustache could not read, but inspired with the hope of pleasing his master he applied himself secretly to study, took lessons at four o'clock in the morning, that he might not encroach on the time required for his regular duties, and speedily acquired the wished for knowledge. Approaching the old man with a book in his hand, he proved to him that if nothing seems easy to ignorance, nothing is impossible to devotion. I again show you the cast, as it is one of the most beautiful demonstrations of this organ which we possess.

That this faculty can only manifest itself by giving alms or money, is a vulgar error. It may be exerted in a thousand other ways. It is benevolence toward those with whom we live, to order our arrangements with a due regard to their comfort, and not to deny them proper gratifications; it is benevolent to suppress our own humors and impulses, when these would occasion unnecessary pain to others; it is benevolent, in giving orders, to restrain Self-Esteem, and, in censuring, to be mild and merciful; it is benevolent to be courteous and considerate to those in humble station. Benevolence, too, is an essential element in true politeness. I knew a gentleman in whom this organ was large, but combined with large Acquisitiveness and Self-Esteem. He had much leisure time, and he would devote whole days to the promotion of benevolent purposes, but very seldom gave pecuniary aid.

Deficient Benevolence does not produce cruelty or any positive sentiment, but it leads to regardlessness of the welfare of others. When it is small, a powerful restraint is removed from the propensities. The organ ought to be large in those who attend on sickness. Let Benevolence be absent, and there is no ever-gushing well spring of goodness. One who has large Conscientiousness may attend the sick faithfully as a matter of duty, but will not manifest that uniform kindness and gentleness, that softness and sympathy, which is so gratifying, soothing and important. I have never known a small in a regular stewardess, which may be accounted for from the fact that one in whom the organ was small would soon become disgusted with the duties and find other employment, or be discharged for neglect. Benevolent men are often very irascible and passionate; this arises from the combination of large Benevolence and Destructiveness. Burns possessed this combination. Compare the height of the forehead above Causality in him and in Bellingham, the murderer, or take the distance above the eyebrows even; in the latter you almost immediately reach the top of the head; in the former you have to travel a considerable distance. This is the head of Wm. Hare, in which you perceive it to be very deficient. This cast was taken during life. Now suppose the thickness of the skull and integuments removed, and how small would be the development of the brain. Compare it with the head of Itammohum Ray. We have more than a hundred skulls of murderers, and in almost all we find Benevolence very small. Persons in whom the organ is small, and Acquisitiveness and Self-Esteem large, cannot conceive the feeling of pure Benevolence: they attribute every thing to selfishness; and if Destructiveness be large, they cannot realize that even the Deity himself can take pleasure in doing good. If urged to some act of kindness and charity toward others, they say they have enough to do with themselves, and that nobody manifests benevolence toward them.

The deficiency of this organ exposes the mind to the influence of the lower feelings, and the temper is then apt to become cold, harsh, sour and unhappy. There is little sympathy with enjoyment; the face of creation appears not to smile; and moral and physical objects are viewed on their darkest sides. And if Destructiveness be large, the mind steels itself with malignity.

Destructiveness and Benevolence do not neutralize, but mutually aid each other. In operative surgeons this combination is generally found. An army going to battle is emblematic of the activity of these two faculties. The enemy marches forward equipped for the work of destruction, yet surgeons attend on it for the purpose of succoring those on whom the calamities of war may fall. Without Combativeness and Destructiveness there would be no war; and without Benevolence, neither mercy nor compassion. Burns was an instance of this combination, and Dr. Currie says of him: "By nature kind, brave, sincere, and in a singular degree compassionate, he was on the other hand proud, irascible and vindictive."

This organ is found developed in the lower animals, and its development may be judged of by the external form of the forehead. In the horse the organ is placed in the middle of the forehead just above the eyes. When this region is hollow and narrow, a horse is invariably vicious, and disposed to bite and kick. In mild and good-natured horses, the contrary form is always present. In dogs the same rule holds good; and in the cat the development of this organ may be estimated. That great differences exist in these animals all know. Some cats will allow themselves to be played with and handled by children without ever striking them, except with their sheathed claws; some scratch at all who incommoded them in the slightest degree. Some dogs will precipitate themselves into water to save persons who have fallen in.

Benevolence may, however, be abused. Conscientiousness is required to stay the hand till justice be satisfied, and firmness to resist impulses in general till reason has decided upon the propriety and mode of going. By indiscriminate alms-giving, profligacy and idleness may be encouraged, and reckless dissipation fostered.

In disease this organ may be preternaturally active. It is often active, too, in idiots. "I once knew a man," says Dr. Rush, "who discovered no one mark of reason, who possessed the moral sense or faculty in so high a degree that he spent his whole life in acts of Benevolence. He was not only inoffensive, (which is not always the case with idiots,) but he was kind and affectionate to every body."

This organ generally gives great sweetness to the voice and kindness and tenderness to the manner.

VENERATION.

This organ is situated exactly in the centre of the coronal region at the fontanel, behind Benevolence. Dr. Gall's father had ten children, one of whom was devout from childhood and wished to become a priest, but was made a merchant by his father. Unhappy in this business, he abandoned it at the age of twenty-three, took orders, and became a very pious, useful man. Dr. Gall was intended for the church, but having no partiality for it, left it for the study of medicine. He also observed a variety of dispositions among children at the schools, for which nobody could account, some being pious, others quite the reverse. This led him to believe religious sentiment to be innate. He then examined the heads of religious people, and finally found a prominence in this region. This was remarkable in his brother, in the portraits of eminent saints, and in antique statues of high priests. He entered the Catholic churches, always open in Europe, and saw the same marks in the greatest devotees—and finally established the organ.

This organ produces the sentiment of Veneration in general, and the tendency to worship. It is a mere impulse, however, liable to go astray; and if the understanding be limited, and no revelation have reached the individual, the unfortunate being may worship the genius of the storm, the source of light and heat, or even brutes, stocks and stones.

It has been said that with this organ man should have no need of a revelation. But this organ, on the contrary, was absolutely necessary to fit man for the reception of revelation; and if Veneration be of itself blind, nothing is more reasonable than that it should receive guidance. From this organ Dr. Gall draws an argument for the existence of God. Destructiveness is implanted in the mind, and animals exist around us to be killed for our sustenance. Adhesiveness and Philoprogenitiveness are given, and friends and children are provided as objects on which they may be exercised. Benevolence exists, and the unhappy and unfortunate are everywhere around us, on whom its benign

radiance may be shed. So man has the instinctive tendency to adore, and we may reasonably infer that a God exists as its object. This argument has, of course, only the force of an apology.

You perceive this region very much developed in King Robert Bruce, who manifested the faculty strongly. Benevolence was rather small in him, and he stained his name by many acts of cruelty and unnecessary executions. But he was always devout. He made a vow that he would visit Jerusalem, but being unable to do so, he made one of his bravest Knights swear to cut out his heart after death and carry it thither. The heart was cut out, but the Knight was killed on the journey. The body of Bruce was, in part, recognized by the ribs having been sawn away on the left side. Compare the head of Bruce with this of Thurtell, in which it is very small. Recollect that you measure the elevation of an organ above a plane passing through the frontal and parietal protuberances; because, if Firmness and Benevolence be very large, it may seem depressed, when it is in fact considerable.

This organ is represented large in the portraits of eminently religious persons. In this portrait of St. John, by Leonardo da Vinci, it is represented as very large; and also in this head of Christ by Raphael. In these the parts behind the ear, or the organs common to man and the lower animals, are small; whereas the organs situated in the forehead and coronal region are very large, indicating great intellect and exalted Benevolence and Veneration. Dr. Gall puts this question: Has this divine form been invented, or may we presume that it is a faithful copy of the original? It is possible, he continues, that artists may have imitated the heads of the most virtuous, just and benevolent men, and thence drawn the head of Christ. But it is more probable that the general figure of the head of Christ has been transmitted to us. St. Luke was a painter, and how should he fail to preserve the features of his Master? It is certain that this form of the head of Christ is of very high antiquity: we find it in mosaics, and in the most ancient paintings. The curiosities of the second century possessed images of Jesus and of St. Paul. He concludes, therefore, that neither Raphael nor any other artist invented this admirable configuration.

Metaphysicians in general do not admit an original tendency to worship. We perceive order, beauty, harmony, power, wisdom and goodness, say they, in the works of creation, and infer the existence of a Supreme Creator and Director, whom we thus feel constrained to admire and adore. We admit that the understanding of man sees through Nature up to Nature's God. But there it stops. It perceives facts and draws inferences, but does not feel emotions. Phrenology therefore goes further and proves the existence of a sentiment the tendency of which is to adore. And that our view is correct, the universal prevalence of this tendency fully proves. Where the understanding is fullest the emotion is often the strongest. Men cut down branches from the trees and worship them; they hew out a rude figure and adore it; they prostrate themselves before reptiles and monsters—facts utterly incompatible with the notion that man worships as the result of a process of reasoning.

This organ gives respect for age and deference toward superiors in rank. In children it is a chief ingredient in filial piety, and produces that soft and almost holy reverence with which a child looks up to its parent. If this organ be small, but Benevolence and Adhesiveness large, children may live with their parents as friends and be to them very kind and attentive; but there will be little of that deferential regard—that submitting of their will to that of their parents—which we witness as the result of the former combination.

Veneration is conspicuous in the heads of those who have great reverence for whatever is ancient and venerable, and who continually talk about "the wisdom of their ancestors." You in this country seem to have little respect for the wisdom of your ancestors; perhaps there is no country in which this direction of the feeling is less prevalent. Servants in whom this organ is large are the most obedient and deferential.

This faculty inspires the beholder with profound awe when gazing on ancient temples, cathedrals or sepulchres. A person in whom it is small would experience little emotion even while gazing on Westminster Abbey, with all its monuments of departed genius. Veneration is one ingredient in the tendency to antiquarianism.

You have often heard that Phrenology is hostile to Religion. This has often amused me when I think that it is the first system of mental philosophy which has recognized an innate facul-

ty giving a tendency to adore. But we must distinguish between Religion and Creeds. The latter are merely the representations of men or the standard of belief which they have adopted. The Scotch Confession of Faith, for example, contains the established creed of the National Church. Now the articles of this creed were adopted by a majority of votes; thus they determined, perhaps by two or three of a majority, what was and what was not the will of God. The sentiment of Veneration gives us a tendency to love God and submit ourselves to His will: but it does not direct us to any particular creed. To say that Phrenology is hostile to Religion, however, is as absurd as to affirm that the discoveries of Newton put out the light of the sun.

This organ is larger in women than in men—and they are more obedient and prone to devotion. In misfortune, too, they submit with a better grace.

When large in a preacher, it is manifested in prayer by the soft breathing fervor of his tones; when small in a preacher, his prayers are cold and formal. This faculty gives respect for every human being.

Some seem to tremble for the stability of Religion; but as Nature has implanted the organs of Veneration and Wonder in the brain, and the corresponding sentiments in the mind, it is a groundless terror to apprehend that Religion can ever be extinguished, or even endangered, by the arguments or ridicule of the profane. Forms of worship may change, and particular religious tenets may now be fashionable and subsequently fall into decay, but while the human heart continues to beat, awe and veneration for the Divine Being will animate the soul; not until the race of man becomes extinct will the worshipper cease to kneel and the hymn of adoration to rise.

The natural language of Veneration is to carry the head and hands upward. In the East it is usual to prostrate the body or bow very low before superiors. This is not the language of Veneration, but the abasement of Self-Esteem. This drawing of Christ represents the attitude of which I speak. He is supposed to be saying, "Not my will but Thine be done."

Sometimes this organ becomes diseased, and the source of the most beatific emotions. In Mr. Drury's establishment near Glasgow, I saw, in 1830, a patient whose tendency to prayer, when laboring under a fit of insanity, was irresistible. In his head I found Veneration small; yet he was on his knees all day. This was thought to be an opposing fact; but this patient enjoyed a lucid interval, when I conversed with him, and asked him whether he enjoyed his devotional exercises when excited. "No," said he, "I do not; I feel very unhappy—as though I was going to be visited by Divine wrath." Cautiousness and Destructiveness were very large in him; and my belief is that he felt overpowering terror, and that in his prayers he was deprecating punishment. Mr. Drury himself became satisfied that this was the true explanation.

FIRMNESS.

This organ is situated at the posterior part of the coronal region, close upon the middle line. You can readily distinguish the middle of Cautiousness; this organ lies directly over it. I shall exhibit specimens of this organ in very different degrees of development. In this head of Mrs. H., Conscientiousness is large and Firmness very deficient. In Haggart you see Conscientiousness very deficient and Firmness very large. In the Rev. Mr. Martin both organs are much developed; and you perceive this part of the coronal region constitutes a large and full arch. Contrast these two heads. In this of Captain Parry the head gradually rises from before backward. In this of Dr. Dodd, in whom both these organs are very deficient, the head is higher in front than behind. This head of Judas Iscariot shows a large development of this organ. In this head of Oberlin it is very large. This is an extraordinary head; and his history exhibits a most delightful example of undaunted perseverance in a course of high and practical benevolence. This organ you see very large in Stubbs; and he was remarkable for his firmness. It is always large in stubborn and refractory children.

Dr. Gall noticed that persons of a firm and constant character have this part of the brain much developed. Lavater had before made the same remark. He who is deficient in this organ is the sport of external circumstances and communicated impressions. When large, it gives fortitude, constancy, perseverance, determination; and, when too energetic, produces obstinacy, stubbornness, infatuation.

Firmness has no relation to external objects; it only adds a quality to the manifestations of other organs. Thus with Combativeness it produces determined bravery—with Conscientiousness inflexible integrity. Firmness, however, cannot supply the deficiency of other organs. One with very small Tune might persevere in striking the keys of a piano seven years without making melody. We must distinguish between the manifestation of Firmness and the gratification of the large organs. An individual in whom Acquisitiveness is large may persevere unceasingly in the pursuit of wealth, but in the means employed he will be vacillating and unsteady. This organ is larger in the British than in the French; and the latter are astonished at the stubborn perseverance of the former. Napoleon complained of the weakness of the French character in this respect. Under the influence of large Combativeness and small Cautiousness, they make the most cheering and vigorous attacks; but, if steadily resisted, their ardor abates and they give way. The British, on the contrary, advance with cool determination, and, although repulsed, are not discomfited, but preserve presence of mind to execute whatever may appear most advisable. This quality is of great service in contention, as he who is able to maintain his faculties in a state of vigorous application for the greatest length of time wearies out his opponent.

This organ is large, as you see, in King Robert Bruce; and he was distinguished for unshaken firmness and vivid hope. His army was sometimes reduced to twenty men; but still he pursued his course with unwavering confidence. The lady whose head this represents was so deficient in Firmness that Dr. Bell remarked that she needed a second mind. She was ever vacillating, and might be turned in any way. She at last bound herself to follow the guidance of a true and judicious friend; in short, she took to herself a second mind. A man in Ohio received a blow upon the head, in the region of Firmness, followed by a tumor upon the skull, of slow growth, projecting hemispherically, to the size of a turkey's egg. On removing it, the surgeon found it spherical, the other half projected into the brain, which was indented. After its removal, the indented brain gradually rose and filled the space occupied by the portion of the tumor covered by the skull. No change in the character had been produced. This is explained by the slow growth of the tumor, the brain accommodating itself to the change.

This organ, when prominent, gives an extremely firm upright gait, as though an iron rod went from Firmness to the spine—a peculiar hardness to the manner, and a forcible, emphatic tone to the voice. Those in whom Firmness and Self-Esteem are large, and Veneration small, find it difficult to bow—they are 'stiff-necked.' Those in whom Love of Approbation and Veneration are large, and Firmness small, are ever bowing—they seem to find it difficult to keep straight.

CONSCIENTIOUSNESS.

The skull which I hold in my hand represents the marking of the head in 1839. In it there is no organ of Conscientiousness. This organ, in fact, was not discovered by Gall, but by Spurzheim. It is situated on the posterior and lateral parts of the coronal region, upward from Cautiousness and backward from Hope.

Metaphysicians have disputed whether a sense of moral obligation is a natural instinct: Hobbes ascribes it to Self-Love; Mandeville, the author of the celebrated "Fable of the Bees," to Love of Praise: "The moral virtues," said he, "are the political offspring which flattery begot upon pride." Dr. Clarke ascribed it to perception of Fitness of Things: he is supposed to have been the object of Fielding's satire in the character of "Square." Hume ascribed this sentiment to a perception of Utility—thus placing man on a level with a chest of drawers; Paley to Hope of Eternal Reward; Cudworth, Hutcheson, Stewart, Brown and Reid insisted on a moral sense; McIntosh denied it, and Adam Smith ascribed the sentiment of justice to sympathy between the approver and the action and object approved. Phrenology, by fixing this single point, has conferred a great boon upon moral science. It proves that a faculty exists which is to produce the feeling of duty or obligation, independently of fear of punishment, hope of reward, or any other extrinsic motive. This sense of moral obligation must not be confounded with Justice, for Justice is one of its results. Justice is a compound idea, or conclusion resulting from the operation of the intellect upon human actions. The latter investigate the motives and consequences of actions, but there they stop—no

feeling of duty or obligation is the result. But as soon as the intellect has thoroughly examined a subject and penetrated into the springs from which it proceeds, a feeling of decided approval or condemnation arises spontaneously in the mind. Suppose you were sitting on a jury; when you had heard the evidence, a feeling arises in the mind that this is right or that is wrong. The intellect sifts testimony and draws inferences. Conscientiousness decides upon the right. I know this to be true, because I have been acquainted with men of great intellectual talents, who, after hearing testimony, could not tell where justice lay.

This faculty controls and regulates all the others. If Combativeness and Destructiveness be too active, Conscientiousness prescribes a limit to their indulgence; it permits defence, but no malicious aggression. If Acquisitiveness urge too keenly, it reminds us of the rights of others. If Benevolence tends toward profusion, it issues the admonition Be Just before Generous. If idealism aspire to its high delights when duty requires laborious exertions in another sphere, Conscientiousness supplies the curb, and bids the soaring spirit stoop its wing. It brings all the faculties to the standard of duty, and gives an earnestness of manner—a directness of purpose—a prompt fulfilment of obligations—which constitute that daily beauty in the life which renders the individual in the highest degree useful and respectable.

This faculty acts also as a spur to the other faculties and may lead us to acts as duties which the other faculties, if active, would have prompted us to perform from inclination. If Benevolence be deficient, duty is not only rigidly performed but rigidly exacted. There is little or no consideration for the errors or follies of men. Such men do not, as they ought, temper justice with mercy.

When deficient, the grand regulator is seen to rule with a weak hand, and the feelings come by turns into too energetic play. An individual in whom this faculty is weak generally acts and judges of the conduct of others according to the predominating feeling of the time. He is amiable, stern, harsh, courteous, or repulsive, according as Benevolence or Destructiveness or Love of Approbation or Self-Esteem bears rule. Such men are never to be relied on. As judges they are unsound, as friends unreasonable, as sellers apt to misrepresent and extort, as buyers to depreciate and evade payment.

So far from the Laws of Honor, as they are called, being prompted by Conscientiousness, they can only exist where it is weak. They are the offspring of Love of Approbation and Self-Esteem. The conscientious man, if conscious of being right, would remain inflexible; but if aware that he is wrong, so far from deeming it a degradation to acknowledge his fault, he rises in his own esteem by doing so. But when Conscientiousness is weak, Self-Esteem refuses to admit its fallibility, and Love of Approbation feels as though the world's esteem would be lost by such an acknowledgment, and the wretched victim, rather than acknowledge that to be wrong which is utterly indefensible, will go to the field and die.

To those in whom this faculty is small, no feeling is more incomprehensible. According to Madame de Staël, Napoleon was never so completely at fault as when he met with opposition from a man who acted under the influence of pure integrity. To obtain the aid of such a person, he offered him money—no, that would not do. He offered him title—no, that would not decide him. He then asked him what he did want. The man said he wanted nothing, but that he could not consent to do what he considered wrong. Napoleon could not understand this and considered him essentially mad without knowing it. It is a favorite maxim with some that "Every man has his price"—a maxim which those in whom Acquisitiveness or Love of Approbation is large and Conscientiousness small consider as profoundly discriminative; but there are minds whose deviation from rectitude no price can purchase, no honors procure.

Veneration, Conscientiousness and Benevolence may exist independently. Their union forms the religion of the Bible, as expressed in the command to do justice, love mercy and walk humbly with God. Those in whom this combination exists are, to use the language of St. Paul, "a law unto themselves."

It is deficient in savages, being small in the Indians of North America, and least of all in the negroes of New Holland. It is very small in the Esquimaux Indians; and they are greatly addicted to lying and theft. It is much better developed in the Afri-

can Negroes. When it is large in children, they evince great honesty of character; when small, and with large Secretiveness, they are disposed to falsehood.

When diseased, this organ produces excess of remorse. A clergyman believed himself the cause of all the bloodshed in the wars of the French Revolution; and a man who owed nothing believed that he was indebted to every body and deserved to be devoured by rats.

When treating of the last organ, I showed a number of examples of this in different states of development. In this head of Rammohun Ray, the organ, as you see, is greatly developed. In Haggart small.

This faculty and Benevolence produce Gratitude. It is a mistake to suppose that great criminals necessarily feel remorse. I talked to Hare when in prison; and notwithstanding his atrocious deeds, he did not feel remorse in the slightest degree. Bellingham did not feel remorse, nor was the woman Goufried troubled in the slightest degree till disturbed by the law. In Haggart, Benevolence was rather large, and he felt great regret for having murdered the jailor at Dumfries; but, Conscientiousness being small, he felt no remorse on account of the thefts which he had committed.

When this organ is deficient, individuals are totally unfit to be a law unto themselves. This shows the absolute necessity of written laws by which to direct their conduct.

This organ communicates a pleasing simplicity to the manners, and gives an uprightness to the gait.

DELPHIAN AMUSEMENTS.

WOODMAN, SPARE THAT TREE.

Woodman, spare that tree!
 Touch not a single bough!
 In youth it sheltered me,
 And I'll protect it now.
 'Twas my forefather's hand
 That placed it near his cot;
 There, woodman, let it stand,
 Thy axe shall harm it not!
 That old familiar tree,
 Whose glory and renown
 Are spread o'er land and sea,
 And wouldst thou hack it down?
 Woodman, forbear thy stroke!
 Cut not its earth-bound ties:
 Oh, spare that aged oak,
 Now towering to the skies!
 When but an idle boy
 I sought its grateful shade;
 In all their gushing joy
 Here too my sisters played.
 My mother kissed me here—
 My father pressed my hand—
 Forgive this foolish tear,
 But let the old oak stand!
 My heart-strings round thee cling,
 Close as thy bark, old friend!
 Here shall the wild-bird sing,
 And still thy branches bend.
 Old tree! the storm still brave!
 And, woodman, leave the spot;
 While I've a hand to save,
 Thy axe shall harm it not.

G. P. MORRIS.

ΞΥΛΟΚΟΠΗ ΦΕΙΔΟΥ

Ξυλοκόπε φαιδου
 Δρυς! μή κλωνίζης,
 Παρασκευάζε μου
 Πάρος; αμύν' αὐτά;
 Ἐγγυς στήθεος πατρός
 Περυτεύεσθαι αὐτά;
 Αὐτοῦδ' ἰσθὰ δειδώς,
 Μ' ἑταίρῳ ἀξύνει!
 Δένδρον κινουμένον
 Μυρμύκας ζεύγεις,
 Ἐμὸν ἑταίριον,
 Οὐκ αὖ ἐπιταμιεύεις;
 Πάλῃγε ξυλοκόπε
 Ἐχέ; καὶ τὸν κορμὸν
 Πάλακιν μὴ κοπτεῖ,
 Πρὸς τοῖα ἡμῶν;
 Πάρος ζῆται' ἐν οὐρανῷ,
 Αὐτοῦ ψυχρὴν σκάνη;
 Ἀδίδακτα, τῷ τόπῳ
 Ἠχασθ' ἑμῶν;
 Μήτηρ ἀνικ' ἰδὼσα,
 Πάτερ τίθεται με—
 Σφραζέσθαι δάκρυα,
 Δρυς παλαιὴ ἰσθὰ!
 Φρίκας ζῆντος, μου,
 Σ' ἑταίρῳ, ὡς φίλος;
 Πρὸς πάλας ἀφ' ὅζου
 Μελισσὴν αἰετός;
 Δρυ, ζάλας ἀμύμων,
 Ξυλοκόπε ἰσθὰ!
 Ἀξίτη μὴ βλάψαι
 Εἰς αὖ χερσὶν αἰσῶ.

N. C. BROOKS.

FORSTMANN, SCHONE DIESEN BAUM.

Forstmann, schone diesen Baum,
 Ruchre keinen Zweig mir an!
 Wie er mich im Tugendtraum,
 Will ich schuetzen ihn, als Mann.
 'Swar mein Ahno, der zur Seite
 Dieser Huette ihn gesetzt.
 Lass ihn hier, den Frevel meide,
 Dass dein Eisen ihn verletzt!

Diesen alten trauten Baum,
 Weitgepriesen neber land
 Und der Meere weiten Raum,
 Will vertilgen deine Hand?
 Loesen mit dem Todesstreich
 Seine Wurzeln, tiefvergweigt?
 Forstmann, schone diese Eiche,
 Die stolz in die Lueste steigt!

Als ich noch ein Knabe war,
 Suchte ich sein Schattendach,
 Spielte in der Schwestern Schaar,
 Kannte noch kein Ungemach.

Wenn die Mutter mich gekuesset,
 Hat er's oft mit angeschn—
 Laechle, weil die Thraene fliesset,
 Aber lass den Baum mir stehn!

Tren schmiegt dir mein Herz sich an
 Wie die Rinde dich umschlingt.
 Hebe kuehn den Zweig hinan,
 Wo der Vogel froehlich singt!
 Steh im Sturme, sonder Beben!—
 Aber fort nun, harter Mann!
 Keiner soll die Axt erheben,
 Weil ich ihn noch schuetzen kann.

REV. H. SCHEID.

PERDONA EL ARBOL.

Perdona el arbol, lenador amigo,
 No injurias de su todo ni una rama;
 Su sombra ha sido en mi ninez testigo,
 Ya protegerlo la gratitud me llama.
 Mis remotos abuelos lo han plantado
 De su cabana cerca, que adornaba;
 Respeta, lenador, su antiguo estado,
 Que no asi tanto bien de un golpe acaba.

Es arbol venerado en la familia
 Cuya gloria y blason esclarecido;
 Por mar y tierra provoco' la envidia;
 Y, temerario, lo veras rendido?
 No cortes, lenador con mano airada,
 Los lazos que lo unen a este suelo;
 Perdona aquea encina tan amada,
 Que se eleva cual torre hasta el cielo.

Me acuerdo cuando era un tierno infante,
 Goce feliz sus sombras agraciadas,
 Cual mariposa alegre e inconstante,
 Con mis hermanas en horas regaladas.
 Bajo della mi madre me ha besado,
 Mi padre me abrazaba carinoso;
 Mi amargo llanto sea de ti estimado
 Deja existir la encina, jeneroso.

Del corazon sus cuerdas a ti atadas,
 Amiga, estan cual tu corteza dura;
 Las aves aun veras en ti anidadas,
 Y moveras tus ramas con blandura.
 Mofate aun del huracan potente,
 Y deja el puesto lenador insano;
 No, no le heriras; tu hacha es impotente,
 De ella le salvara mi fuerte mano.

PROF. J. A. PIZARRO.

TU PARCE ILLI ARBORI.

Tu parce illi arbori,
 Nec noce ramulo!
 Profuit juveni
 Mi; ac illam defendo.
 Proavus posuit
 Juxta illius casam;
 Lignator manebit,
 Ne molire asciam.

Truncum veterrimum
Amavi; ac umbram
Ceu consanguineum
Succiderese illam?
Nec ice lignator
Nec cæde stipitem;
Quercum illam patitor
Florere, veterem.

Dum puer, otio,
Petivi umbraculum;
Hic sorores gaudio
Luserunt ver novum
Hic mater fovit me
Hic pater amavit—
Huic lachrymæ ignosce,
Ac sine ut arbor stet!

Præcordia tenent
Te, ut liber, amice!
Hinc volucres canent
Ad auras amoenæ:
Sperne arbor procellam
Lignator hinc abi!
Non tendes asciam
Dum manus erit mi.

LETTERS FROM OUT THE OLD OAK.

NO. III.

Dear Messenger,—Time speeds apace, and again the period is at hand when it becomes necessary, that Nugatrite should resume his pen, and renew his correspondence with his quondam friend Mr. White. Many and varied have been the changes, which have transpired around, and about him, even within the compass of a month,—some effected by human agencies; others, in obedience to the laws, which govern nature in her usual operations. Already, the forests admonished by the chilling frosts of October, have doffed their liveries of green, and the rich, and royal dahlia, which bloomed the majestic queen of Flora's most favored parterre has faded, and left its stem deserted, and alone. The fields no longer present the eye with the picture upon which it most delights to gaze, assuming in place of their vestures of velvet-green, robes of less brilliant hue, preparatory to the coming of cold and cheerless winter. His messengers, the winds, are even now announcing his approach, and the family groups are assembling about the fireside to avoid his cold and comfortless embrace. Yet change truly

"The spirit of beauty, lighting like the sun
The order of this glorious Universe"—

though mutable is still eternal, and from her spring all those beauteous images,

"Which flash like morning sunbeams o'er the stream
Through the bright medium of the poet's soul."

Typical, indeed, may the seasons be said to be of the life of man. The innocence and joy of young childhood, are well depicted in the spring tide, when young May, blushing in her roseate hues, comes forward to fill the abdicated throne of her sister. The heart, then fresh from the hands of nature, is filled with emotions as chaste and beautiful as the early flowers which spring up to beautify and adorn the extended and smiling landscape. Each dream, when recent from the work-shop of Fancy, and bright with the carnation streaks and golden edgings of Hope, how like the summer's morn, when each shrub and budding flower is wet with tears of gladness, which beneath Aurora's smile become as diamonds

"Glueing in some Pearl's coral cell."

As the russet leaf, when stirred by the breeze, deserts its stem—the throne upon which it has sported its short holyday of existence, and returns to the soil from whence it came; even so, do the monuments of man, and man's grandeur, yielding to the influence of time and neglect, moulder in ruin and decay. Mark the dilapidated condition of that old mansion. The finished neatness of the exterior, and grand scale upon which its offices, its pleasure grounds, &c. were arranged, once announced it to the traveller as the residence of some wealthy lord of the day. Where now are its grandeur, and those who were its once familiar inmates? The one lost amid its ruin; whilst its former inmates, and owners, without a vestige of heraldic pomp, are sleeping beneath their tomb-stones, with scarce a descendant left, to revisit the desolate halls in which his ancestors feasted, and high wail and wassel, were wont to be held. No more is the light and elastic tread of beauty, clothed in smiles and begirt with graces, re-

echoed by its lonely and seemingly deserted walls. The harp has long since ceased to breathe its plaintive notes, and the merry-toned violin is no longer heard summoning the gay revellers—guests of its hospitality—to participate in the giddy and exhilarating dance. The days of its greatness are fast fading from the memories of men; and full soon they shall be, as though they had never been. The grey mists of oblivion are gathering over the story of its early splendor; few tongues remain to narrate scenes which the eye once witnessed within its stately and capacious chambers. No bard of Morven, from the land of his fathers, is heard to sing the fame of its glory. It sinks from sight, and darkness prevails. “Shalt thou then remain, thou aged hall, when the tale of thy splendor failed? No; the palaces of other days shall pass away: another race shall arise. The people are like the waves of the ocean; like the leaves of woody Morven, they pass away in the rustling blast, and other leaves lift their green heads on high.”

Such, Mr. Editor, as presented in the above lines, is the present condition of many old family mansions, erected in the early part of the last century, and scattered throughout my section of country. The most remarkable among them, are Nominy Hall, and Stratford. The one situated on Nominy Creek, a beautiful inland stream. The other near the cliffs, on the banks of Potomac. Counsellor Carter erected the former; the latter was the home of our Lees. Each has suffered from the march of time; though neither yet proclaim utter desertion and decay. In the wane of their days, their glory is passing away; and in reference to them I might use the beautiful language of Hutchinson: ‘I saw them when their pride was brought low, when their magnificence was sinking in the dust, when tribulation had taken the seat of hospitality,—and solitude reigned where the jocund guest had laughed over the sparkling bowl, whilst the owls sung nightly their strains of melancholy to the moonshine that slept upon their mouldering battlements.’ Around and about each yet remain many traces of the taste and beauty of the original design. Even these may soon pass away. Yet what of this? What, though the ploughshare should be burnished by the soil, upon which once stood the family altar of our Lee: green and fresh as the shamrock of Ireland will ever be the page upon which his story is recorded. No castle wall points the traveller to the spot which cradled the infancy of Washington. The ruins of no splendid mansion, lie mouldering over the hearth stones, around which the gleesome days of his childhood were spent. Not a vestige of his humble home can now be traced. It has gone to decay. We raise no monument to blazon forth the birth-spot of our hero; for why—

“Should the marble bestow
That splendor of woe
Which we children of vanity rear?”—

on him whose name has been borne on the winged messengers of Heaven to the ultima thule of the modern world. The gratitude which we feel is graven on the heart, and its manifestation is best evidenced by the tenacity with which we adhere to the institutions he gave us. In emulation of his virtues, long may we appreciate his worth, and thus pay his memory that noblest of tributes, which man is capable of offering at the shrine of his benefactor. Many of the old churches, cotempo-

raries with our colonial governments, are razed to the ground. For their destruction we are indebted in part to the consuming voracity of Time; in part to British invasion and spoliation. One only, Yeocomico, remains in my vicinity, to remind us of the religion of the olden time. A few of the native forest trees, are still standing round about it; and we might almost imagine each the favored abode of some golden-haired Hamadryad, who delighted to protect and watch over this relict of antiquity. The wall enclosing a small area about the building—the bricks of which are said to have been imported from England,—has thus long resisted decay, and is almost perfect, save only where the hands of man have been engaged in its demolition. Within this, and adjoining the eastern end of the church, was a second wall enclosing the cemetery. The materials of this latter wall being less durable, it is demolished; and small fragments of marble slabs, broken by the school-boy, as he sported in thoughtless levity above the resting place of the dead, lie scattered over the mounds. The grey walls, and mouldering roof, in connexion with its singular structure, give to it an appearance truly antique and independent of the date of its erection, which is recorded in figures distinctly legible above the front door; we should readily suppose it built in the early part of the last century.

There is yet one spot, which may not be forgotten, though it is neither the birth nor the resting place of a native of our land. At Kinsale, and near the head waters of a creek making in from Potomac, beneath some pines, about the branches of which the native grape has gracefully twined its tendrils, lies a marble slab, dedicated to the memory of a young naval officer, who fell in an engagement with the British during our last war. Engraven on the slab, is a short and neatly written epitaph, from which we learn that it is the tomb of captain James M. Sigourney, of Massachusetts! Hallowed be the tomb which enshrines the dust of a naval officer; and long may that generous vine spread its branches over the evergreen boughs of the pine, to protect it from the burning sunbeam, and the winter's storm.

The scenery of the lower section of the Northern Neck, though in many places exceedingly soft and beautiful, possesses none of that wild grandeur so characteristic of the more northern parts of Virginia. No mountain cliff here rears its high head to the clouds. No rivulet fretted into foam from the rapidity of its course, is here seen dashing through the broken pass, and rushing hurriedly along its narrow and confined channel. A beautiful tract of table land, it presents to the eye but an extended plain, occasionally interrupted by hills, just sufficiently elevated to overlook the surrounding scenery; whilst the waters of our inland streams—placid and unruffled as those of some highland lake, glide sluggishly away, reflecting from their mirror-like, and glassy surface, the dark foliage of the tall forest trees, which skirt their shores. But go with me, Mr. Editor, in the sunny month of June, to the summit of yonder hill, upon which stands that neat and pretty little cottage, and bid the eye for a moment glance over the extended landscape. The hill, carpeted with the most delicate and beautiful green, slopes gradually away to the banks of the creek, which winds around its base; the gentle breathings of spring are on the waters, and the pigmy ripples are chasing each other in spor-

tive playfulness to the shore, whilst ever and anon is heard the stroke of the oar, as the merry fisherman skims along the surface in his light canoe. Beyond it, and along the opposite banks, lay's an open plain, stretching away for some miles, through which runs the public highway. To the right and left, the lands are divided by cross fences, into extensive fields; in some the rich harvest—now ripe for the sickle, presents a miniature picture of the undulations of the ocean; whilst in others, are seen herds of cattle and sheep, grazing at leisure, or reposing under the shade of some solitary tree. Several dwelling houses are situated within the plain. The groups of trees, artificially arranged, about these—their gardens, their orchards and farm yards, lend an air of rural life to the prospect, which renders it doubly joyous and interesting. On the outer side, this open tract is girded by forests, which apparently extend continuously as far as the eye can reach. Changing our position, and looking in another direction, we behold the creek, after tracing it through all its meanderings, disembogue into the Potomac. Upon her bosom we see hundreds of vessels, and a faint outline of the blue misty coasts of Maryland is the last feature which we distinctly recognize. This may convey a general idea of the face of our country.

And now, Mr. Editor, the period is at hand when your correspondent's series should end. Wayward has been his life; from it his scribblings receive their impress. Widely has he diverged from the course originally planned. Writing simply for amusement, he has acted but from the impulses of inclination, and ably sustained the very dignified signature assumed. The dread of approaching winter congeals both ink and blood, and ere the blasts of old Boreas are rocking to and fro the time-worn branches of his oaken cell, he proposes to vacate his home, and doff his cognomen. We may, perchance, meet again, though with the desertion of the oak, be announced the death, of your friend

Westmoreland, Nov. 3d.

NUGATRITE.

EARLY LAYS,

BY W. GILMORE SIMMS.

I.

I DEFY THEE TO FORGET.

1.

They have torn us apart; but by those angel eyes,
By the sweet glance they gave when first we met,
By our first vow, so warm yet so unwise,
That still must cheer me when all hope has set;
By my fond murmurs, by thy faint replies,
By each dear memory truly cherished yet,
Thy failing accents and thy speaking sighs,
I dare thee, I defy thee to forget.

2.

By all we both must cherish of the past,
When thy dark eyes beneath my glance were wet;
That passionate kiss, the dearest as the last,
Whose sweetness on my lips is ling'ring yet;—
Thy solemn vow to share with me the blast,
Nor in the world's scorn suffer one regret;

By all the love thou gav'st me and still hast,
My heart defies thine ever to forget.

3.

Thou still must love me on through weal and wo,
Howe'er the wall between us hath been set;
They cannot teach thy bosom not to know,
'Tis now, with parting only, comes regret.
Thou knowest I love thee, and thine eyes will flow,
To think how mine must ever more be wet;
By these I triumph—these defeat their blow,
These dare thee, these defy thee to forget.

II.

EYES, EYES, YE HAVE LED ME TO RUIN.

1.

Eyes, eyes, ye have led me to ruin,
Yet still ye are lovely, and still I adore;
Lips, lips, ye have been my undoing,
Yet still I must love ye, and love ever more;
Ye are fatal to fame and I give up endeavor,
'I seek but to bask in the smile ye bestow;
Ye bid me despair of my hope, and O! never,
My spirit may dream of enjoyment below.

2.

Wherefore, young heart, so cruelly sinning,
So sadly 'gainst nature, and beauty and youth,
With eyes so bright, and with lips so winning,
Why so forbidding to feeling and truth?
Can'st thou not love, while evermore lavishing,
Each charming feature of feeling and faith,
Nor let eyes so bright, nor let lips so ravishing,
Doom me forever to sorrow and seath.

III.

WELL, IF THAT DREAM OF BLISS.

1.

Well, if that dream of bliss be over,
That moved so deeply heart and brain,
I am not that insensate lover,
To lose and then to love again:
The hour that tells me hope has vanished,
An hour of freedom cannot be;
As well assure the wretch that's banish'd
From home and country, he is free.

2.

'Tis true that gallant barques may bear him,
To other shores as bright as this,
And eyes may warm and lips may cheer him,
With gleams and promises of bliss;
But, were he blind to every aspect
Of stormy sorrow in his gaze,
He could not lose that lovelier prospect,
That charmed him in his earlier days.

3.

The exiled heart may never cherish—
Since from its hope forever gone,—
One lingering dream that will not perish,
With that, the first-beloved one.
Far on the seas of memory roving,
Destined to watch, yet still deplore;
His passions, like its tempests proving,
His hopes, the wrecks that strew its shore.

4.

If thine's the heart, whose bitter anguish
The flight of days may soothe or still,
'Tis well, perchance, that mine should languish
'Neath broken vow and fickle will ;—
The heart which thou discard'st so cheaply,
Thy spirit shall not hear repine ;
It loves thee still, too dearly, deeply,
And gladly bears the doom of thine.

IV.

THERE'S A LIGHT.

1.

There's a light that is seen in our loneliest hours,
It awakens the soul from the sleep of despair ;
It comes to the heart, like the dew to the flow'rs,
And leaves it the freshness it met not with there :
'Tis seen after moments of bitterest anguish,
When wo, like the storm-cloud, hangs over the breast,
Which cheered by its presence, soon ceases to languish,
And rises to rapture, and sinks into rest.

2.

It sheds not its ray for the tyrant, awaking
That hope in his soul which he knew not before,
It charms not the warrior, from blandishments breaking,
To bathe to the hilt his sharp falchion in gore :
But it comes when the first gush of joy has departed,
It soothes the wild pulse and it softens the pain,
And brings to the breast of the lone and sad hearted,
That balm which the mourner had hoped not again.

3.

It comes, like the moon shining through the dark hours,
And it tinges life's sky with its tenderest glow,
And gives to the forest, and flings o'er the flowers,
Those delicate hues that embellish them so.
It comes, and the desolate heart long forsaken,
Arising in ardor, with sorrow may cope—
It comes with a power of magic, to waken
Every fancy of youth, every vision of hope.

V.

OH ! WEEP NOT.

1.

Oh, weep not, I pray thee, when memory shall waken
The thought of the bard thou hast loved, in thy
breast ;
Could he deem that thy heart in that thought would
be shaken,
His own grief would never, even now, be repress'd :
No ! the song that, to win thee, his lyre has given,
Was pour'd in thine ear in a moment of bliss ;
Let its memory not darken the smiles of that heaven,
Which has mingled the joys of the future with this.

2.

And when in thy bow'r of home thou repeatest
The strain, that, for thine, his fond spirit has wrought,
With the voice that to him is the dearest and sweetest,
Since it rouses the dearest and sweetest of thought ;
Then the minstrel,—perchance in that hour long de-
parted,—

As the song thou awakest in rapture upspring,
Will listen and linger around thee, lighthearted,
If no sad tear of memory from thee touch the strings.

VI.

BE IT FOLLY OR FRENZY.

1.

Be it folly or frenzy, so sweet the delusion,
I would not, for worlds, it should cease to be so ;
And deep were the guilt of that busy intrusion,
Which by truth or by reason that folly would show.
The world is a painful deceit, and the pleasure,
The only true pleasure we find in it here,
Is when we can shut our eyes to the measure,
So full and o'erflowing, we drink of its care.

2.

What better than frenzy, this evil disguising,
If, mentally blinded, we see not our chain,
And the dream which beguiles us, predominant prizing,
Refuse to look down on our fetters of pain ?
We see not the straw in the cell that receives us,
We feel not the scourge which would torture us still ;
We know not the guile in the heart which relieves us,
And life has no evil, and nature, no ill.

3.

Why waken the dreamer, when bright to his vision,
Seems the life that, on waking, his spirit deploras ;
Why torture that spirit, whose hopes are elysian,
With the gloom and reverse that attend upon yours ?
Call it folly or frenzy, but, O ! in my madness,
Forbear to enlighten—my heart is at stake ;
I dream, it is true, but my dreams are all gladness,
All grateful, all glorious, and why should I wake ?

VII.

WHEN THE HOPES OF THE HEART.

1.

When the hopes of the heart thou so dearly hast che-
rished,
Till even in its wreck it has carried thine own,
'Neath the frowns of its kindred and people have
perished,
Denied all their promise, their splendors all gone ;
Thou wilt weep, I am sure, o'er the desolate ruin,
Thou wilt cherish the feeling once sacred and pure,
And muse, with sad thoughts, over fortune's undoing,
Refining the sorrows that still must endure.

2.

Thou wilt not forget, though to this they would bring
thee,
That the exile they hate has reposed in thy arms ;
And the venom'd reproach which they utter will sting
thee,
And rob all the bloom from thy sunniest charms ;
They will teach, thou wilt feel, that the love which
had won him,
'Till, duty forgotten, he ceased to be free,
Was the source of that spell which in truth has undone
him,
And made him forgetful of all things but thee.

3.

And when the sweet hours shall return of our meeting,
The long summer eve, in our moonhallow'd grove,
When thy heart press'd to mine, in its rapture was
beating,

And we had not a thought, not a feeling but love ;
Oh, then thou wilt sigh for the bliss that's departed,
More dear from the sorrow which follow'd it still ;—
Oh, then thou wilt weep for the lone and sad hearted,
That, blessed by thy love, even Hate could not kill.

VIII.

WE ARE ONE.

1.

Tomorrow !—tomorrow !—
The sound, to my heart,
Comes linked with a sorrow ;
Tomorrow we part.
The dream which has made us
Forgetful so long,
At last has betray'd us
To madness and wrong.

2.

And deep for the error
Our hearts must atone,
Thus taught by the terror,
That finds us alone :
With every stay shiver'd,
With every hope fled ;
Our vessels dis sever'd,
And storm overhead.

3.

But vain, the cold hearted,
Our spirits would shake ;
We cannot be parted,
Not e'en at the stake !
That truth still is left us,
Else hopeless, undone,—
Our love's not bereft us,—
We are one (—we are one.

Machiavel's Political Discourses

UPON THE FIRST DECADE OF LIVY.

Qui nous délivrera des Grècs et des Romains ? is a question which has long since become a proverb in France. The history, the heroes and the mythology of the ancients, have for ages been divested of the interest which novelty never fails to impart ; and the taste of the scholar leads him rather to avoid, than to repeat them. Their laws, their constitutions and their polity, however, seem to have escaped the general eye—though when thoroughly examined, they will be found to contain most excellent theories of political philosophy. The president Montesquieu, with his accustomed ability, has chalked out their origin and progress, their cause and their effects. For many of his profoundest ideas and most comprehensive views, upon this, as well as upon many other subjects, he is indebted to an author whose

fate has been as hard with posterity as it certainly was with his contemporaries, and whose example affords another proof that after-ages, are frequently as unjust, as our own is generally neglectful of sterling talent and well-earned fame. In the discourses which MACHIAVEL wrote on the Decades of Livy, he has unfolded with a masterly hand the principles and policy by which the grandeur of the Roman Republic was reared, and thrown out with lavish prodigality some of the profoundest maxims of political wisdom that are recorded in the annals of government or the writings of constitutional lawyers. It is not our purpose at present, to notice all his works, or to rescue his character from the obloquy under which it has for centuries suffered. This generous task has been performed by many wise and eminent men, from the time of Lord Bacon down to the present ; and the day perhaps is not distant, when his character will be as fully understood and his fame as freely acknowledged in other countries, as they are already in his own. We shall confine ourselves in this article to his discourses, and, following its pages, endeavor to trace to its true sources and deep-laid principles, that enormous power which the Roman Republic for so many ages maintained over the nations of the earth.

They who read history merely to know dates and facts, turn a most delightful study into a dry and barren task. A knowledge of past events, can be of little service to those who seek it to pass time, or who desire to impose upon society by making a display of their crude and cumbersome erudition. They become a nuisance in proportion to the progress which they make, and grow in impertinence as they increase in learning. Having few ideas of their own to display, they store their minds with insulated facts and detached sentences, and hope to supply by bare memory the want of imagination and judgment. They do not make themselves wiser or better by study ; and in trying to impose upon ignorance by a gravity which is as false as it is unmeaning, they find that they have stretched the credulity of men too far, and wonder that others do not mistake their dulness for genius and their prolixity for eloquence. But the philosophic student of history will bend his mind to the causes and the effects of things ; to the lives of great men and the customs of great nations. He will inquire by what means and by what arts states have been built, and will follow them in their swift march to wealth and dominion. He will keep his eye on the looseness of morals and discipline brought about by the growth of luxury, and will mark the silent changes produced in the manners and customs of the people by rising commerce and the arts of peace. While he does not overlook the ravages of time, he will closely watch the stealth of power from the many to the few, until vice becomes too universal to be either borne or remedied, and the state at first begins to slide and at last to rush to ruin. Having gazed at the annals of past ages as a venerable monument, he will hold up for our imitation whatever is worthy of being a model, and will warn us to shun that which has already proved base in its design and base in its end. Living in a free state, he cannot but desire to follow the footsteps of the ancient republics, which sprang from small beginnings to be the mistresses of the world, and whose example if it does not point out what to pursue teaches us at least what to avoid. Of all the countries, of

which accounts have come down to us, he will find no state richer in great men or more fruitful of great events than ancient Rome; none in which poverty was so long honored and yoked with virtue; none in which the desires of men were more strictly bounded by their resources; none in which public virtue and private morals were so eminent and useful; and none into which avarice and luxury emigrated so late. Having weighed these things, and living in a time when men speak lightly of what cost so much blood and treasure; fearful that a government which has so long been the theme of praise, will at last be the victim of obloquy, and that the labor of a century will be lost in a day; with a mind full of joy at the past, and of fear and forebodings for the future, he will be frequently led to contemplate for his own instruction and to unfold for the benefit of others, THE POLICY OF THE ROMAN REPUBLIC.

It has always been a custom with those who have a high opinion of themselves, or, who wish to exact respect and deference from others, to lay great stress upon the antiquity and fame of their ancestors. Most people are prone to believe that the virtues of the father fall upon his children; and bestow praises upon men for actions which they have never performed. This pride and this advantage of descent belong to nations as well as individuals. The Republic boasted of her origin from the Gods, and claimed Mars as the founder of her city. According to her historians, the cruelty of Amulius was evaded, and the channel of the Tiber changed by the care of the Protecting Deity; and the children thus doomed to death, were rescued from ruin and reared by the Immortal Gods to be the founders of Rome and the first of the conquerors of the earth. She thus imposed upon nations by an innocent artifice, and induced them to bear with more equal mind the yoke which they were sometimes ready to throw off. Her own citizens were fired with an ambition to support their descent by their deeds, and each age burned to surpass the preceding in glory. Reverence for their forefathers and love for their posterity—feelings which above all others hold a sway over the human mind—worked in full force. To rouse a Roman soldier to deeds of chivalry and arms, no other appeal was necessary than that of Galgacus to the Caledonian army—*Think of your fathers, think of your children.* Hence public wealth stood in contrast to private poverty, and military success kept pace with personal bravery. Hence the heat of the combat was fanned by the delights of victory, and their actions were noble as their spirit was elevated. It was thus that enemies chose to be friends, and rivals preferred to be defendants. It was thus that the Republic was rescued so often in times of peril and alarm. It was thus that she gathered courage from despair, and rose more terrible from every defeat.

The Republic, in the meantime, grew by fortifying the places that were fitted for building, more however, in hopes of future numbers than for the accommodation of present inhabitants. That her greatness might not be ideal, and that its importance might not dwindle for the want of numbers, an asylum was opened where crowds of the neighboring people fled in search of novelty and wealth. Buried in the bosom of hostile tribes, who beheld with envy her rising fortunes, it was her policy to hold out every inducement to emigration, and to welcome all classes, with the hope of converting vice into

virtue and guilt into innocence. Men of bad principles frequently change their character, when placed in new situations where temptation is set at naught by industry, and honesty is more profitable than crime. The wants of nature being supplied, and the necessities of their condition removed, they become hardy soldiers in war and useful citizens in peace. The Republic broke the faith of treaties and the rights of hospitality; she defied the enmity of the injured Sabines and braved the resentment of their ravished daughters, to supply their want of women and to give to every man the hopes of marriage and of offspring. She well knew that the affections of the wife and the tender solicitude of the mother, would outlive the pride of the father and the resentment of the virgin. She well knew that kindness often springs from injuries, and that love is a speedy remedy for a woman's distress.

As the elements of national character are as varied and as susceptible of impressions as those of individuals, the events of its early history and the actions of persons in credit and authority must have great influence upon the destinies of a country. So deeply rooted is the principle of imitation in our nature and so ceaseless is our reverence for those who have gone before us, that the habits and opinions of the people are almost moulded after those of their fathers and especially the first founders of the state. Thus, if I mistake not, the hardihood of the Spartans was owing to the example not less than to the laws of their first legislator. And the fond love of liberty which has ever been the birthright and the boast of Englishmen, may be traced to the bold spirit of their Saxon ancestors. It was the good fortune of Rome that her first king was a model in war and her second a model in peace, and that in the first dawn of the Republic men were so hurried on by the fire of their feelings as to overlook domestic ties and private interest in the overthrow of authority, and that their illustrious example had great influence not only upon the conduct of individuals but the character of the nation. Whatever it is that moulds the morals of a people, the manners of one period follow those of the age which precedes it; and nothing but a revolution either gradual or instantaneous can put things into a new track. Courage being a precarious quality, because exercised by few and at distant intervals, was propped in the infant Republic by public opinion; and the soldier had his own stock of bravery increased by the conduct of his rival in the ranks, and by the expected praises and perhaps dreaded scorn of his fellow citizens. The dangers of the combat were lost sight of in the thirst for a triumph; and from a hope of the noblest rewards and a fear of the most degrading punishments, the legions of the Republic became the dread of their enemies and the staff of the state.

No Republic can rise to wealth and dominion that does not hold out sufficient encouragement to virtue. Where riches are more praised than fame, and persons inherit offices which they cannot fill, and honors which they do not deserve, the minds of men are held under an unnatural restraint. In the Roman Republic there was no post, however high, that virtue and talents might not reach. Before the eyes of the commander glared the *opima spolia* and the triumph, and even upon the common soldier rewards were showered equal to the valor which he had shown. The consuls chosen

yearly, never grew lazy, but each one bringing to the helm of affairs newness of mind and freshness of ambition, burned to distinguish his consulate by some memorable event, and fought with a spirit which was whetted and not worn out by domestic dissensions. Nothing is so hurtful to a commonwealth as unbroken peace and repose. Not that a state should forever be plunged in wars and bloodshed; but, as well might we expect the human body to be sound and healthful without exercise, or the rivulets of the meadow to be clear without a current, as to dream of permanence to an inert, sickly and feeble Republic, whose very lifeblood flows from turbulence and commotion. There must be something to rouse the minds and spur the spirit of men—else power is apt to rest where it is already lodged, and people are willing to confer upon descendants what they have already trusted to their ancestors.

Notwithstanding all this, the ingratitude of Republics has long been a theme of declamation with those who are fond of contrasting the patronage and liberality of princes, with the indifference, and perhaps insensibility, of free governments. The people are so fickle, that even envy and suspicion often succeed to favor, and talents are forgotten as soon as they cease to be exerted. The ostracism of Athens, by which her wisest and noblest citizens were driven into exile, was a deep stain upon the constitution of that fierce democracy. Talents and worth were placed at the mercy of the mob, and there was no security for merit and no reward for sterling integrity. But in the Republic, virtue was honored in the living and revered in the dead. The loss of great men was frequently mourned by the whole senate and people, and their funeral expenses paid from the public treasury. She had never lost her liberty by the ambition of her citizens, and hence it was not a part of her policy to overwhelm with envy and suspicion, men who in peace were the ornaments, and in war the props, of the state. Founded then in truth and experience, is this observation upon government: that nations who have preserved, are not so rigid as those who have recovered, their liberties.

The Republic soon reaped a rich reward from the virtue and talents of her citizens. On great occasions, when the state is most in danger, counsel is more useful than strength, and one man of greater service than numbers. The mass of men know not what to do. They have neither eyes to see, nor ears to hear. They are thrown upon a wide sea, without chart or compass; and whoever flies first to the helm, gains the guidance of the ship. It is then that worth rises to its level, and mind becomes lord of the ascendant. People shake off the misletoes, who have hitherto been free to flatter, but who are now unable to advise or defend them. The men who are at the top of the pack are shuffled down to the bottom, and for once in an age the game of life is played with a full deck and unmarked cards. On what page of Roman history is not carved an ennobling love of country? How often was the state saved by the conduct of one man and the wisdom of another? How often were the public wars entrusted to private care and waged by private arms!

But while the Republic was generous in rewarding true patriotism, she did not fail to punish dangerous ambition. She did not balance a man's deserts with his demerits, and because he had saved, allow him to

destroy her liberties. Frail indeed are the foundations of that government, which encourages a citizen to do good only to enable him to do evil. Short must be the life of that nation, which allows favor to be a privilege for mischief, and acknowledged services an apology for treason. The best of men are too apt to be made drunk with power, and giddy with popularity. The spirit of usurpation is too apt to get the mastery of any mind, that is restrained by no fear but that of self-reproach. So prone are we to mistake interest for duty, and love of self for love of country, that no Republic can be safe which does not, like the Roman, liberally reward the virtues and severely punish the vices of her most powerful citizens. And this at least may safely be said—that no nation ever lost its liberties by being too vigilant to preserve them. Well then did they humble the pride of Publicola, and hurl Manlius from the Tarpeian Rock. Well then did they drive Coriolanus into exile, and let him know that the power of a single class is not to be reared on the ruins of a whole city, and that the liberties of a whole people are not to be sacrificed even to the pride of the proudest man in Rome! *Illud notandum videtur ut sciam homines quæ et quanta decora, sæda cupiditas regni non ingrata solum sed etiam invisa reddideret.*

It is this greedy spirit of usurpation that, under a variety of forms but in purpose always the same, has been the perpetual scourge of nations. Sometimes, it displays itself under the form of anarchy, and in opposition to the principles of the social compact. Again, under the name of aristocracy, the happiness and liberties of the people are destroyed by the unfeeling passions of the great. A thirst for power seems to be born with us, and is a rich source of misery to the world and of uneasiness to ourselves. The delight of trespassing upon the rights of others, is a madness which few have the power to withstand. It was not long after the expulsion of the kings, before the senate began to oppress the people. So tight were the reins of authority drawn, that debtors justly complained, that while fighting for their country they were thrown into dungeons by their creditors, and that their liberties were more secure in war than in peace and among their enemies than their fellow citizens. But the senate soon found that its dignity was not respected unless supported by authority, and that the resistance of the people run into actual encroachment. Neither the prayers of the Conscript Fathers, the entreaties of the consuls, nor even the danger of foreign attack, could put a stop to the secessions, tumults and angry factions of the people; until their wishes were gratified and their liberties secured. The tribunes were granted for their defence, and, what was a more important point, which they gained afterwards, were to be chosen by the *comitia tributa*. They procured admission to the consulship, and obtained the privilege of intermarrying with the patrician order. On the whole, whoever attentively considers the causes and the effects of these tumults and seditions, will find that they sprung from a love of liberty and ended in its triumph. They effected the balance of power between the senate and people, and prevented the few from oppressing the many. And if, as various writers assert, and indeed as the Holy Scriptures assure us, men are naturally wicked, and will seek every opportunity to show their depravity, laws only can make them good—for from good laws spring a good education, and from a good

education good citizens and soldiers. Where public spirit, and not selfish ambition prevails, parties are not only useful but necessary to a free government. Blackstone contends (with what degree of truth I will not examine,) that the present liberties of Englishmen are no more than those which were enjoyed by the Saxons, under their old constitution. It is certain, however, that they were recovered, if not originally obtained, by a series of encroachments upon royal prerogative. And yet, who ever censured the mail-covered barons of England for their factious resistance to the Norman kings? Let no one, then, be too hasty to blame the tumults and the seditions of the people, since they secured and increased the threatened liberties of the Republic.

But, if all that we have said be true—if the Republic were really so jealous of her liberty—why did she ever submit to a Dictator, and lodge in one man that power which she had so fearfully fought to keep in herself? Many persons who, in my opinion, do not sift this matter to the bottom, have said that the office of dictator opened the door to tyranny, and that there never would have been kings if there had not first been dictators. But, of all the admirable institutions which raised the Roman commonwealth to such unexampled grandeur, this must be ranked among the foremost. In every aspect in which it can be viewed, it bears the marks of that far-seeing policy which is built on a thorough knowledge of human nature. It was admirable in the mode of appointment, in the term of service, and in the exactness with which it served the purposes for which it was designed. The dictators were nominated by the consuls, who, from commanding, were reduced to obey, that they might feel no sense of disgrace, or have the least excuse to get up an excitement with the people. They could be dangerous to no state that was not already corrupted, and not a single one was duly appointed who did not some service to the state. Indeed, in every well-governed Republic, some extraordinary magistrate has always been needed to preserve it in great and unforeseen emergencies; as may be seen from the constitution of the Venetian Republic, from the conduct of the Dutch when they invaded England, and from the free constitution of England itself. For it is the power which is usurped, and not that which is conferred by the people, that is dangerous to their liberties.

Neither does the creation of the decemvirs prove that the Republic was not jealous of her liberty, or that the people were disposed to recede from the ground for which they had fought nearly half a century. This is proved beyond doubt, by the occasion which brought about the office, and the means by which it was continued. It was an indiscreet surrender rather than a total abandonment of her liberty, and it was continued by the pretended justice and temporary moderation of the decemvirs themselves; by the report which was artfully whispered about, that there were two other tables besides the ten already examined, which would be wanting to the Roman law unless the decemvirs were chosen again; by the odium into which the consular office had fallen; and by the deceit of the decemvirs themselves, whom you would not know whether to rank among the magistrates or the candidates. In fine, it was owing to an extravagant degree of liberty in the people, and an immoderate ambition in the nobility. The one wished to destroy the consuls, and the other

the tribunes, and each courted the decemvirs as his friend, and the only instrument to put down the opposite party.

The Republic was always engaged in long and bloody wars. The temple of Janus (as if in mourning for peace!) was closed only three times in the course of seven hundred years. The state made peace only with the vanquished, and resolved either to fall or to conquer other nations who, sometimes in war and sometimes in peace, were never so ready to attack or so prepared to defend. By the fights of the gladiators the people were accustomed to bloodshed and carnage, and by the exercises of the Campus Martius were enabled to wield stronger weapons than those of any other nation. Their improvement both in civil and military affairs was never at a stop. They learned useful lessons equally from their own defeat and that of their enemies. Regarding the art of war as the spring of national greatness, they devoted every thought to its perfection. It was the soul, or rather, as a French historian has expressed it, the god which inspired the legion. Great generals, in their old age, walked down to the Campus Martius and taught the young men to poise the lance and throw the javelin. It was here that the census was taken and the lustrum performed—*res saluberrima tanto futuro imperio*. It was here that the armies of the Republic often met before the beat of the drum, and finished a war the very night that it was begun. It was here that the consuls, flushed with the budding honors of a conquest or a triumph, kept up the discipline of the camp, without interfering with the duties of citizens. And it was here, that the youths of the Republic entered that school which fitted them for the noblest scenes and most thrilling deeds. Never was there a nation whose military operations were planned with so much prudence and carried on with so much activity. Never was there a people to whom peace was such a labor and war such a recreation.

Whenever hostilities were declared, a *justitium* was proclaimed. The shops were closed and business suspended. The eyes of the people were thus turned from their private concerns to the public danger, and the whole force of the nation brought into successful action. Hence their wars were short and decisive, and peace was restored almost as soon as it was broken. The soldiers received their pay from the plunder, and not from the public treasury. Their eagerness for the spoils, and the ambition of the consuls to gain the honors of a triumph, gave a spirit to their armies which nothing could resist and paved the way to universal empire. And thus war, which in other countries entails national debt and national misery, was at Rome a chief source of wealth and dominion.

We may observe further, in a few words, that the Republic followed these among many other rules of deep and simple policy.

1. As the soldiers were a part of the people, and not of a standing army; and as they received their pay from the plunder, and not from the public treasury; their numbers were greater in proportion to population, and their incentives to action keener, than those of any other nation, either ancient or modern.

2. The equal or nearly equal division of lands, gave each man an equal interest in the country, and made him a citizen and not a slave, a soldier and not a hireling.

3. In times of the greatest prosperity, when public affairs are usually neglected, the senate was more watchful than ever.

4. They gave some of their conquered lands to their allies, and thus weakened their enemies and strengthened their friends.

5. When they were engaged in several wars at the same time, they made a truce with the *weakest* foe, who was generally very glad to put off his fate.

6. The senate dissembled the injuries, of every sort, which they received; and instead of punishing private individuals, reserved their vengeance for the whole nation.

7. They seldom made leagues; and when they wished to wage war, forced their enemy, or rather victim, to commit the first overt act of hostility.

8. Their treaties were only suspensions of war, and they attacked their foe on his *strongest* point; if rich, they exacted a tribute; if powerful at sea, they demanded the destruction of his navy; and more particularly, when they made peace with a king, they exacted his brother, or other near relative, as a hostage—so that they might have it in their power to crush him or sell the liberties of his people.

9. Whenever two nations were at war, they took side either with the one or the other, and, like the knights-errants in the days of chivalry, never refused their assistance to those who implored it.

10. Their constant maxim—which has since become a proverb—was, Divide and Conquer.

11. They never imposed their laws and customs upon conquered countries; but undermined their power gradually, that they could not even fix the date of their destruction.

These conquests would have been of little service to the state, if the vanquished nations had been subdued only by arms and kept in subjection only by force. Situated as these nations frequently were, at great distances from each other, they would seize every opportunity to throw off the yoke which was placed around their necks, and would never submit to slavery while there was the least hope of liberty. There is no bold and brave people that will long submit to dependence and vassalage; and the greater the oppression of the mother country, the stouter will be the resistance of the colonists. It may be concealed or repressed for a time; it may even be lulled asleep by temporary kindness and deceitful promises; but the smart of ruthless wrong will tingle in every vein, and the smoother the surface, and the longer the train is preparing, the more terrible will be the explosion at last. William the Conqueror, treated the Saxons like slaves, and not like subjects. He derided their customs, abolished their language, degraded their nobility, increased their taxes, stripped them of their possessions and turned a deaf ear to grievances of his own infliction. Hence the Normans and Saxons were forever two distinct races of men; nothing could equal the insolence and oppression of the one, or the stout resistance and surly independence of the other. A government which might have been supported by moderation, was made odious by oppression; and contempt on the part of the victors, and deep resentment on the part of the vanquished, were the bitter feelings which widened a breach already too broad, and, for an incredible length of time, made enemies of men who

might have been friends and fellow citizens. Such was not the policy of the Roman Republic. Instead of the harshness of victory, they relieved the anguish of defeat by acts of kindness and esteem. They received vanquished nations into the bosom of the state; conferred upon the common people the rights of citizenship, and enrolled their chief men among the Conscript fathers. Nothing was left undone to make them forget their misfortunes, and to remind them that they were a part of the Republic. If they had any customs better than those which the Republic already possessed, they were immediately adopted; and thus, while increasing the numbers, they improved the civil institutions of the Republic. It was the policy of Athens and Sparta to take away from their citizens the right of marriage and intercourse with foreigners, and hence these states were ever small Republics. But the Romans extended their limits both by soft and gentle means, and by force and violence. *Roma interim crescit alba numero*, expresses much in a few words. If any colony were too unruly to be kept in order, emigrants were sent from the city to hold it in awe; and although these, in their turn, were sometimes rebellious, and became more attached to the place of their abode than that of their birth, yet they were, for the most part, faithful to the trust reposed in them, and contributed much to the grandeur of the Republic. In this country, one administration pulls down what the preceding has erected, and the state sometimes advances, and as often recedes, from the goal of national greatness. But the policy of Rome was permanent and uniform. It seldom changed; it never fluctuated. It was the same in the Republic and the Monarchy; and was pursued, with equal constancy and firmness, by the kings and consuls, from the foundation of the city down to the birth of our Savior.

With conquered countries the Republic never took a middle course. They either cut them off entirely, or else treated them with frankness and kindness; and, as we have said before, granted them the rights of citizenship. This policy Camillus speaks of very forcibly, in a report which he made to the Senate, after a victory over the Latins. "All Latium," said he, "is now in your power. You can secure to yourselves a lasting peace with this country, either by pardoning or destroying it. Do you wish to punish them severely, captives and prisoners as they are?—You are at liberty to lay waste all their lands, and plunder all their towns. Or, had you rather enlarge the empire after the manner of our ancestors, by receiving the vanquished into the state?—You have a noble opportunity of treading in their paths, with great glory and profit to yourselves." *Illorum animos dum expectatione stent, seu pana seu beneficio præoccupari oportet.* A nation that has fallen in defence of its liberties, will expect that treatment which a people ought to receive, who deserve, though they do not enjoy, their freedom. If treated well, they will behave dutifully—if ill, they will seek the very first opportunity to free themselves, and vex their masters. No person—certainly no nation—will lead a life that is grievous to them any longer than they are forced to do so, or faithfully observe the terms of a treaty to which they did not yield of their own free will. The Republic thus prevented the rebellions which are incident to a growing empire; and by a policy deep in its conception and unrivalled in its success, made every

victory a stepping-stone to new and still greater conquests.

Now, with regard to these conquests, there is one thing of moment to observe,—that the colonists were never allowed to defend themselves. And for this, two reasons may be given. 1. It taught the colonists to look to the Republic for support and defence; and 2. It prevented them from acquiring that skill in the art of war, and from feeling their own strength on the field of battle. And as they were often solicited, in secret, to take up arms against the state, information and obedience from them were always rewarded.

When there was any real danger from abroad, the Senate made it a point to conciliate and court the people. Thus, when alarmed by a foreign invasion, the people were freed from taxes, and were kindly told that they paid their tribute to the state by educating their children. This indulgence produced such union in the state, that the lowest classes hated kings as heartily as the highest; and no man, by the meanest arts, was ever so popular as was the whole Senate at these times. So condescending are the great, when it is their interest to be so, and so grateful are the people for kindness, even when done from unworthy motives! Again: As soon as the tribunes had prepared the people for tumult, and were themselves ripe for sedition, the Senate stirred up a war with some neighboring tribe; that private grievances might be drowned in the general danger, and domestic dissensions quelled by foreign alarm. When the consuls could not rely on the valor, or rather the fidelity of their troops; when they dreaded no enemy more than their own soldiers, and no strength more than their own arms; they always kept their forces within the camp, in hopes that time would soften their anger, and restore them to their allegiance. They encouraged the enemy to taunt and insult their troops, until indignation and shame turned their thoughts from home to abroad, and their breasts burned in turn with foreign and domestic animosities. The consuls delay—the soldiers urge—the consuls deliberate—the soldiers beg for battle. At last, their minds are ripe for action, and orders are given to commence the engagement. The general exacts an oath from the soldiers, that they will die or return victorious from the field. And when did a Roman ever take an oath which he did not fulfil?

It is a principle with those who wish to make their power as lasting as possible, to reward their friends and punish their enemies. Most men are too fond, or perhaps too much in need of the favor of the great, to brave their resentment, when by servility they are able to get under their wings. And what is strange, this rule of action, always allied with ambition or revenge, is, in modern times at least, viewed as the offspring of generosity of spirit and nobleness of heart. The Romans were too well acquainted with human nature not to take advantage of this weakness; and while they pursued their enemies with sleepless activity, loaded their friends with unending kindness. The fruits of this policy were immediately seen. Those who dreaded their hatred, courted their favor; and the friends which they already had, were grappled to their bosom with hooks of steel. When the consuls were besieged in their camp, so that not even a messenger could be sent to inform the Senate of their danger, these faithful allies not only gave notice of the disaster, but offered

to assist in retrieving it. And when the capitol was seized by the slaves, and neither the consuls nor the Senate could persuade the people that this servile war was anything but an artifice of the Patricians to postpone the laws then before them, the dictator of Tusculum, thinking this a fine chance to curry favor with so great an ally, immediately marched with an army into the forum, and, by his assistance, the citadel was snatched from the slaves and the Republic perhaps rescued from destruction.

It is the policy of a modern kingdom (we speak of Prussia), to educate the people at the public expense. The rising hopes of the nation are taken from the care of their parents, and placed under that of the government. This provision, apparently humane and useful, has been much extolled by a celebrated report of a celebrated philosopher, and indeed by the press and the friends of learning throughout the world. But I fear that we have been deceived; and have mistaken a crafty design to fetter, as a generous desire to enlighten the minds of men. Young persons are placed, at a very early age, under persons appointed by the king and receiving their pay from the government. Their minds are moulded just as those in power choose to direct; a uniform, universal mode of thinking prevails throughout the country. There is no scope for inquiry—no liberty of discussion—nor that elasticity of thought which springs from difference of opinion. So deep and abiding are the impressions made on the youthful mind, and so much do the permanence and grandeur of Republics rest upon the education of children, that I do not hesitate to say, that Rome was more than once indebted for her safety to the manner in which her young men were reared—not by the government, but by their own parents—not at the public expense, but by private care. For, when Caius Marius having fled to the Volsci, had returned with a hostile army to the very gates of the city, the Senate sent the wisest men in the state to proffer terms of peace. But these were haughtily refused by the proud avenger of his wrongs, and the ambassadors came back only to increase the alarm and consternation of the people. The priests and ministers of religion then formed a long and mournful procession, and, marching to the camp, interposed their prayers and holy offices to soften the heart of this enemy at once, and exile of Rome. But he turned a deaf ear to their sad rites and solemn ceremonies. At last, when hope had given way to despair, the matrons went forth to supplicate the mercy of this inexorable foe. Not the tears of moving beauty, nor the shrieks of affrighted innocence; neither soft affection for an imploring wife, nor tender solicitude for lisping babes; could touch the chords of his hard but not inaccessible heart. Reverence for his parents put to flight every other feeling; and this man, unmoved by all that usually affects the human heart, was induced by filial piety alone, to withdraw his army from the gates of the city; and, after a train of misfortunes rich with moral instruction, closed by a miserable death his splendid but not faultless career.

Lawgivers have, in all ages, found religion of great service in governing Senates, leading armies, and keeping the people in order. The Augurs went with the army, and before a battle was proclaimed, always examined the entrails of birds. If they were favorable,

the joyful news was proclaimed to the soldiers, who, under a fond delusion that heaven was on their side and had already decreed them a victory, fought with hopes that gave strength to the weak and courage to the timid. The Sybilline books were preserved by priests appointed to expound their mysterious contents, and, if any tumults arose in the city, the consuls ordered them to be searched; and the ministers of religion declared that it was there foretold, that the city would be attacked if civil discords prevailed during the year. Some think it savors of atheism, to bring the mistress to serve the handmaid—religion to serve policy. Without doubt, religion unfolds higher views than mere policy aims at. It needs not the support of falsehood, and can gain no strength from lies. But they who declare, that the sentiments which we advance are the opinions of crafty and cunning men, and lead to all that is perverse in politics, depraved in morality, and wicked in religion, are rather to be esteemed for their honest indignation than admired for the excellence of their judgment. For we hold these truths to be undeniable—that no state can prosper which throws religion aside; and that the word of God was intended, and ought to be made use of, to regulate the conduct of men towards their government, as much as their conduct towards one another.

Among the many customs which may be traced up to the early times of the state, we may add the census—by which an account was taken every five years of the numbers and estates of the people, as the best measure of their progress or decline, and the surest test of their policy and conduct as a nation. This custom, which was first brought into England by William the Conqueror, in the compilation of Domesday Book, and which has since become so common, was of great service, not only in ascertaining the power of the Republic, but in subjecting that power to order and discipline. The greatness of a nation depends upon the private morals of its citizens, and these are too apt to become corrupt when the gradations are so easy between success and prosperity, luxury and dissolution. Men, perhaps, are not fonder of vice than a good reputation, and are impelled to crime by no motive stronger than the hope of secrecy. As they rise higher by cunning and deceit than downright honesty, and are never more dangerous than when they have imposed upon the people by false pretensions to virtue or wisdom, nothing is more necessary to a free Republic than that the character of every one be known. And however invidious it may seem to inquire too minutely into the private lives and little failings of men, this ought always to be expected—certainly borne by those who lay claims to the confidence of the people, or aspire to the government of the state. The most powerful incentive is thus given to virtue, and the highest rewards held out to talents. And let any man read the history of Rome, and point, if he can, to a city where the people were so uniformly guided in their elections by the merits of the candidates. How often were the turbulent and ambitious tribunes defeated for offices, which they themselves had the chief agency in creating! How often did the people pass by men of their own rank, and confer the offices in their gift upon proud, but bold and brave Patricians!

There is a principle of government which has been

made so ridiculous by those who practice and admire it, that we cannot allude to it with a sober face;—we speak of *rotation in office*. This principle has been called the essence of every sound Republic. But it is not republican to turn men out of office, merely for the sake of a change. Under pretence of encouraging virtue and talents, it gives birth to a spirit of fawning and flattery that finally ends in despotism. It is destructive of freedom of opinion, and freedom of speech. It is at war with the first principles of liberty, and the plainest notions of common sense. Instead of throwing power from hand to hand, it inevitably draws it into the grasp of one man. It lulls the people to sleep, and puts a blindfold over their eyes while slumbering in fatal security. It never was a part of the Roman constitution—it most assuredly is not of ours. It never was practised by them—it should not be by us. Let us not be misunderstood. No one cherishes more warmly than we do the representative principle of our government. No one more stoutly claims, or would more willingly exercise, the right of instruction at the polls. Thanks be to our fathers, we can show our power often enough, to make those to whom it is entrusted feel and own their responsibility. But we say that this government will be virtually at an end, when talents and honesty are indiscriminately proscribed. What is there worth living for in a Republic, where every thing that is noble must bend before every thing that is mean? At all times, and in all places, palsied be the arm, and speechless be the tongue, that would lift themselves against an honest man fighting in an honest cause!

But there is a principle which was a part of Roman polity, and which is a main bulwark of American liberty—to limit the term of offices to short periods. These periods were sufficiently protracted to enable a magistrate to become familiar with the duties of his station, and yet not long enough for him to form any plans against the public liberty. The great maxim upon which all governments should be built, and which was a prominent feature of the Roman constitution, was that the greater the power the shorter the term—and inversely, the smaller the power, the longer may the duration of office safely be.

As the common law of England is divided into *lex scripta* and *lex non scripta*, so constitutions may be divided into those which are written and those which are unwritten. The Romans never met and adopted a form of government that could not be altered without the formal vote of a large majority of the people. Laws were passed, as occasions demanded—and institutions founded, as emergencies called for. Their political system grew in excellence as it ripened with time. It was not formed all at once or by the same persons in a fixed convention. Its deficiencies could be supplied and its redundancies lopped off, without that excitement and convulsion which always attend a change, or even proposal to change, the settled constitution of a country. Besides, occasions frequently arise which no written instrument could have foreseen, and which, without the passage of some new law, or the election of some new magistrates, frequently bring ruin on the state. It is not an easy matter to write a constitution that shall guard sufficiently against innovation and yet always suit the peculiar exigencies of the times. Between the

different departments of the government, there must always be preserved a balance of power and a balance of interest. Through the want of strong and salutary checks, some one branch may swallow up the power and independence of the rest, and a Republic in theory prove a Monarchy in reality. In the infancy of a society, it is impossible for any man to foresee the various causes that work in the formation of national character and the alteration of national condition. That character and that condition flow from so many circumstances, and are liable to so many changes, that no wisdom can say what laws and what enactments will suit them. *Experience is the best lawgiver, and time the safest innovator.*

It would not be out of place to enter minutely into the Roman constitution, and to show how admirably it was fitted for the purposes it was designed to serve—the aggrandizement of the Republic. We are no great admirers of the civil law, whatever excellences it may contain. Every one must prefer the simpler, freer, noble system of the common law of England. It must not, however, be forgotten, that the civil law was enlarged, but not improved, by the edicts and rescripts of the Emperor. Whoever will weigh that law as it is digested by Cicero, will find little to add and still less to lop off.

We have thus attempted to trace to its proper sources, the grandeur of the Roman Republic. Many of those sources lie in an unknown and undiscovered region. We have pointed out the mighty influence which descent, education, morals, love of liberty, devoted patriotism, encouragement of virtue, and the civil, military and religious institutions of the state had, upon its march to that height of power and fame which it afterwards reached. Much has been laid at the door of fortune, but we are too apt to give to fortune the credit of events, because we do not know, or if we know, because we do not trace the sources from which they spring. He who will peruse the discourses of Machiavel upon the Decades of Livy, will be surprised to find design and art in every part of a machinery so vast and complicated. Scanned by the searching eye of the Florentine secretary and Italian statesman, the grandeur of the Roman Republic is no longer a mystery yet to be unravelled—but its origin and progress may be as distinctly traced as though it were marked on a map.

Lexington, Ken.

R. W., JR.

LINES

ADDRESSED TO A LADY.

Remember me! Who would not be remembered?
And yet how vain the hope, that Memory,
In the rich casket of her hoarded gems,
Will store one thought of him, who ne'er again
Must meet the eye! Yet thus to be remembered,
Thus to be cherished in the faithful hearts
Whose love is life's best bliss—this is the hope
That cheers the death-bed, lights the fading eye
With its last ray, and closes it in peace.

How dear the thought! The disembodied spirit,
Freed from the grave, shall hover round the forms
Beloved so long, and mingle with their sighs,
And whisper hopes of that far distant world,
"Where friends, once parted, meet, to part no more."

Fond, foolish thought! For could it be fulfilled;
Should the strong barriers of the ponderous tomb
Betray their trust, and give the prisoner back,
To wander through the scenes of his past joys,
And hold communion with the souls of those
Whose hearts had once been his,—ay, would he find
One thought of him to welcome his return?
Straight to the couch, where lies the beauteous form,
That his last earthly gaze saw pale and weeping,
His viewless pinions speed. The parted lips
Invite his entrance; and a long drawn sigh,
Inhales the spirit to the deep recess
Of the close thoughts and secret fantasies
That people slumber with the images
Of what has been, and what may never be.

What sees he there? Again the altar blazes
With Hymeneal torches, and again,
In bridal vestments decked, before it stands
A form of light:—and now the plighted vow
Again is softly murmured; and he blesses
The constant heart, that, faithful to the dead,
Still holds his image in its inmost thoughts.

Is THAT his image?!! His the hand that clasps
Her slender fingers? His the lips that quaff
The first ambrosial kiss of wedded love?
ANOTHER has his place!!! And the dear dream
Is not of him, nor of the hallowed rite
Which made her his. 'Tis HORN,—not *Memory*.—
Whose magic spell has conjured the scene
That thus foreshadows to her sleeping fancy
A new espousal; while the secret chamber
Of her most cherished thoughts is thronged with forms
New to his eye; and in the midst he stands
A Guest unbidden. Now that downcast eye
Is raised.—It meets his own!! A start! a scream!!
Scared at the phantom, trembling she awakes,
To watch till morn, lest sleep again should haunt
Her couch with dreams so hideous.

Back he flies;—
Back to the tomb: demands admission; calls
For stone on stone to shut him from the world,
And tries to sleep again that dreamless sleep
He now would have eternal.

T.

THE PRUDE.

Venus with Love went roving one day,
Where the dancing waves are seen to play
Around her Cyprean isle;
And Love was in a merry mood—
And swore in accents rather rude—
He'd make a woman just as good
As ever deigned to smile.
He skipp'd away with merry bound,
And soon a Lily stalk he found
To represent her form,
He'd bend it just as much he said,
As when she bowed her lovely head
To meet the coming storm.
The Damask-Rose he mingled then
With Snow-drops gathered from the glen,
To give her cheek its hue;
"This Jasmine bud will make me now
The golden hair, for her fair brow,
Her eye—this drop of dew:

Her heart—I'll seek some sunny spot—
But no—here is a Touch-me-not—
Now breathe, my gentle lady dove,
Be mine the task to teach you love!"

To life the fair creation sprung
But all in vain his bow he strung;
No shaft could reach the lady's heart,
The Touch-me-not had done its part,
And Love now lost his merry mood,
He found too late, he'd formed a Prude!

Medical College, at Richmond, Va.

This institution, which is a branch of Hampden Sidney College, has been in operation but little exceeding a year, and has already realized the sanguine expectations of its friends. We had the pleasure of attending the introductory lectures of the professors at the close of the last month, and believe that we speak the general voice in declaring our high admiration of the eloquence, ability and learning which enchained listening crowds to the lecture room throughout the week. The whole, without exception, consisted of a series of discourses of a cast sufficiently popular to interest the unprofessional hearer, and yet distinguished by profound and philosophical views—a familiar acquaintance with the history and progress of medical science, and of its many illustrious triumphs over human prejudice and error. Nor were the lectures exclusively confined to scientific details or historical research, but wandered occasionally into the pleasant fields of classical lore, where some of the choicest flowers were culled, and some of the richest poetical gems selected to delight the audience. In truth, we do not recollect to have heard the philosophy of life and disease—the startling story of the "many ills which flesh is heir to"—the unwelcome revelation of man's frail yet wonderful structure—the marvellous tie which links his mortality and weakness to an immortal nature,—so attractively and tastefully illustrated. What wonder, that, when admiring the graceful drapery which fancy could throw around the sternest realities, the words of Milton should have flashed on our memory—

"How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as in Apollo's lute,
And a perpetual feast of nectared sweets,
Where no crude surfeit reigns."

When it is recollected that this college has suddenly sprung into existence unaided by public endowment, too much praise cannot be bestowed upon the individual enterprise, perseverance and energy, which have already achieved for it a character of stability and usefulness not surpassed by older institutions. The spacious and elegant building which it occupies, could not have been better adapted to its various uses, if originally designed exclusively for such objects. The general lecture room has been fitted up in a style of superior taste, and is large enough, we should judge, to contain with ease two hundred students. There are, besides, two other lecture rooms for the chemical and anatomical classes, and we confess we were very agreeably surprised at the extent of the anatomical

museum, and, as far as an unprofessional spectator could judge, the completeness and excellence of the chemical apparatus. That however which must give peculiar value to the institution, is the presence of an infirmary within the walls of the building, in which the patients are provided with airy and comfortable rooms, attentive nurses, and constant medical attendance. The opportunity which is thus afforded for instruction at the bed-side of the sick, by an easy and convenient transit from the lecture room, cannot it seems to us be too highly appreciated. The diseases, moreover, which are here daily presented, being many of them peculiar to the South, must unquestionably afford an advantage to southern students which it would be unwise to disregard—and the facilities for obtaining subjects for dissection cannot be surpassed, we apprehend, in any other city in the Union. Upon the whole, if the Medical College at Richmond does not grow up and flourish—if it does not attract a large portion of patronage, and southern patronage especially—it is altogether idle to reason from facts; or, what would be no less extraordinary, it would be in vain to expect enlightened communities to be governed by their own obvious interests. We want a great southern medical school, and such a one cannot more surely prosper than in a city which is rapidly increasing in population and resources—where living is comparatively cheap—where society is intelligent and polished, and the position of which, with respect to climate, is the happy medium between northern and southern extremes.

Although the second course of lectures has but just commenced, we understand that there are already between sixty and seventy matriculates in college. This is a considerable gain over the last year, and if the number should advance in the same ratio of increase hereafter, it will require but little aid from arithmetic to predict the speedy establishment of the school upon a firm and durable foundation. But the question here naturally arises, shall the institution be left to the unaided resources and efforts of a few gentlemen, however distinguished for their zeal, energy and resolution? Is not the public also—we speak not only of the city but of the state at large—deeply interested in its success? We are aware that a tempest has recently passed over the money and commercial affairs of the country, as blighting in its effects as an eastern sirocco—but may we not hope that the hour is fast approaching when reason shall resume its empire over the passions, and the inglorious struggles of party shall be yielded to the common good—when the calm of prosperity and peace will enable our statesmen and patriots to perceive, that the real happiness of a nation consists not in the vindictive squabbles of politicians, but in the diffusion of light and knowledge and virtue among men. When that halcyon period arrives—and may it come speedily—we must carry on in our own Ancient Commonwealth, a noble rivalry with our sister states in the works of benevolence, utility and science. Our own metropolitan city, especially when extricated from her now heavy pecuniary engagements, must put forth her strength in aid of an institution which will greatly redound to her interests—provide a professional education for her rising offspring—elevate the standard of medical science within the range of her influence, and add greatly to her own reputation abroad.

To our numerous friends and subscribers in the southern and south-western states we beg leave to remark, that in the notice which we have here taken of the Medical School in Richmond we have consulted and proclaimed our own thoughts and convictions—unbiased by any feeling or sentiment, either personal or local. We have done it upon our own responsibility, and in the conscientious discharge of our duty, and we do not think it necessary to give pledges either for the sincerity of our motives or the veracity of our statements. If in our desire to advance the general cause of science we can also serve our own city and state, we think ourselves not only authorised but absolutely bound to do so; and we doubt whether the severest censor could reasonably find fault with this simple view of the subject.

We had intended, at the commencement of this article, to present from some of our random notes, a more detailed notice of the several introductory lectures delivered by the professors—but partly from inability to do justice to the subject, and because it was our misfortune not to have heard the first of the series, which the public have unanimously commended for its eloquence and beauty, we think it best to decline the task. Where all were excellent though various in character and style, it would be unnecessary if not invidious to discriminate. We will observe, in conclusion, that three of the faculty have been not undistinguished professors at other institutions—and of the remainder, one has been long physician to state and city institutions, and all enjoy the confidence and patronage of the public. We subjoin a list of the faculty from a pamphlet lying on our table.

JOHN CULLEN, M. D., *Professor of Theory and Practice of Medicine.*

THOMAS JOHNSON, M. D., *Professor of Anatomy and Physiology.*

R. L. BOHANNAN, M. D., *Professor of Obstetrics and Diseases of Women and Children.*

SOCRATES MAUPIN, M. D., *Professor of Chemistry and Pharmacy.*

L. W. CHAMBERLAYNE, M. D., *Professor of Materia Medica and Therapeutics.*

AUG. L. WARNER, M. D., *Professor of Surgery and Surgical Anatomy.*

LINES,

Addressed to a young lady by an old gentleman to whom she had given a *Snow-berry*, and who, in return, gave her a *Morning-glory*.

Yes! flowers have a language, and to him
Whose eye, deep read in Nature's mysteries,
Is skilled to trace the grave and awful meaning
That God himself, in most familiar objects,
Hints to the heart of Man, need no interpreter.
He bids the Rose expand her glowing charms,
And wither while we gaze; and when we sigh,
To think that ought so fair should be so frail,
That sigh inhales the imperishable fragrance
That, like the Heaven-born spirit, still survives;
And thus that Rose becomes a leafy volume,
That tells of Death and Immortality.

To Youth and Age alike that lesson speaks:
To you it whispers prudence,—hope to me.

So, when to mine the wintry *Snow-berry*
Thy gentle hand conveys, the gracious smile
That makes the gift so precious, does but point
The grave rebuke of one, whose blossoming head
Has borne no fruit of price. 'Twas kindly meant:
And did this sterile garden yield a gem
Fit emblem of thyself, my hand should place it,
Freshly to bloom above thy radiant brow,
And match its beauties with thy damask cheek,
And its rich fragrance with thy balmy breath.
None such is found. The flower that spreads its bosom
To court the sun's first ray, and fades ere noon
And leaves behind no odor, speaks to those
Who slight the enduring beauties of the mind,
And live forgetful of the immortal part
That mocks at Time, and triumphs o'er the grave. B.

THE SMITHSONIAN INSTITUTE.

[The time is rapidly approaching when the Congress of the United States will be compelled, by considerations too strong to be resisted, to give effect to the munificent bequest of Mr. Smithson, by the establishment of an Institute at the Seat of the National Government, for the "diffusion of knowledge among men." In view of this important movement, and feeling a deep interest in the successful accomplishment of a scheme which promises so much benefit to succeeding generations, we have taken the liberty to address various inquiries to an accomplished friend, in relation to Mr. Smithson himself, as well as the proposed Institution at Washington. The answer to the first part of our inquiries, relating to the character and philosophical opinions of the testator, we have now the pleasure of spreading before our readers, and we hope, in the January No. of the Messenger, to furnish our correspondent's views, in detail, of the best system of instruction which can be devised in fulfillment of the testator's intentions, and which shall, at the same time, be best adapted to the wants and genius of the American people. Our obliging correspondent, by his connection with learned institutions in this country, and familiar acquaintance with those in Europe, could have no superior in the accomplishment of the task which we have used the freedom to solicit at his hands.]—*Ed. Lit. Mess.*

LETTER.

MR. TH: W. WHITE,

My Dear Sir,—I received your letter duly, and reply, with much pleasure, at the earliest opportunity.

The character of the late Mr. Smithson, is certainly very much misunderstood among us. That a man of a philosophic turn of mind, of few wants and a retired habit of life, should in process of time acquire a competent fortune, is not at all strange. As to the way in which he thought fit to dispose of his property, the very act itself bears the mark of a most noble generosity, and is a public token of the opinions of a learned sovereign on our institutions and government.

The first duty of an executor, is to perform faithfully the wishes of the testator—as far as he can understand them. *His acceptance of the trust is his own act.* But once having undertaken that task, he is bound by the laws of all societies to proceed to its completion.

The UNITED STATES can do nothing in this matter, except what is dictated by the loftiest principles of honor. There is that sensitiveness among us, originating in a feeling of national pride, which shrinks from any thing having even the remotest appearance of a misappropriation for self-aggrandisement. We are an exceedingly wealthy people,—we need not foreign eleemosynary aid, to equip Exploring expeditions, or erect an Astronomical observatory.

Our General Government has undertaken an important duty. It has received from the hands of an European philosopher a certain sum of money, binding itself to apply it, in conformity to his wishes, for the diffusion of useful knowledge. A spectacle so singular has not perhaps been exhibited before. We have undertaken to perform a great duty for our fellow men and for posterity. The eyes of the learned in all parts of the world are upon us;—it is a point on which national integrity and national honor are concerned,—a point on which party feeling must not bear. We all know, that some doubts have been raised as to the propriety, or even the power of government, to do what it has. But what is done, is irrevocable:—it must not be written in American history, that when this republic was called upon to aid in the cause of the diffusion of knowledge and virtue among mankind, it made the attempt, and failed from incompetency.

With the late Mr. Smithson I was never acquainted. He spent much of his time on the continent, and it is said was a man of reserved habits. You know already that he cultivated with much assiduity Chemical pursuits; but very few are aware, that he wrote to some extent on these topics.* An idea of his feelings and turn of mind may be gathered from these papers.

His passion for chemistry appears to have commenced early in life, and continued to its close. He seems to have been on terms of familiar acquaintance with Dr. Black, and some of the leading members of the old Scottish school. There is extant a letter from the former gentleman to him, dated 1790; its conclusion runs—

"We have no chemical news,—I am employed in examining the Iceland waters, but have often been interrupted,—I never heard before of the quartz-like crystals of barytes aerata, nor of the sand and new earth from New Holland. Indistinct reports of new metals have reached us, but no particulars. Some further account of these things from you, will therefore be very agreeable. Dr. Hutton joins me in compliments to you, and wishing you all good things, and

"I am, dear Sir,

"Your faithful, humble servant,

"JOSEPH BLACK."

The Dr. Hutton here mentioned, was the same philosopher who made so distinguished a figure in Geology, as the antagonist of the celebrated German, Werner.

At the commencement of the present century, there used to be published in London a monthly scientific journal, known under the name of Nicholson's Magazine;—it afterwards gave way to the Annals of Philosophy, commenced about 1813 by Dr. Thomas Thomson. To the pages of both these works, Mr. Smithson was a contributor. I remember formerly to have seen, in a No. of Nicholson for 1803, an account of the analysis of a mineral performed by him,—the signature to it is James Smithson, Esq. P. R. S. Whether this is a

misprint for F. R. S., or not, I have not now the means of knowing. It struck me, at the time, that it must have been an error, for I have never heard that he had been President of the Royal Society. He was however a fellow of it, and very often had communications read before it. Some of your readers who have access to the transactions of the Royal Society, might easily determine this interesting point.

You have asked me, to tell you any particulars in reference to his philosophical or other opinions. That he was a man of much acumen in these matters, a paper read before the Society in 1813 may serve to shew. It is stated, that when he was in Italy in 1794, a substance that had been ejected from Vesuvius was given to him for examination, and he ascertained, after some trials, that it consisted chiefly of sulphate of potash; on re-examining it with more accuracy, he determined it to be a very complex saline compound. By way of introduction to his paper, he gives a view of his ideas about the origin of the earth. In his opinion, it was either a sun or a comet, and was brought into the state in which it now is, by undergoing combustion on its surface. The volcanoes are relics of this original combustion, and the materials were the metallic bases of which the primitive strata are composed. As a proof that these primitive strata have been formed by combustion, he mentions that "garnets, hornblende, and other crystals found in them, contain no water; and that little or no water is to be found in the primitive strata themselves." This paper is in the Transactions for 1813.

So you see, he had come, by chemical reasoning, to a conclusion similar to that which FOURIER was contemporaneously publishing in France, as the result of mathematical investigation, that the earth is nothing more than an encrusted star.

Sometime after this, he commenced an investigation into the nature of the colors of vegetables and insects,—he noticed, that the red color of flowers, is occasionally produced by the union of carbonic acid with a blue substance.

In a letter written at Rome, in 1819, and which was published in the Annals of Philosophy the same year, respecting a remarkable mineral of lead, he makes allusion to one of the ablest of his contemporary chemists: "The first discovery of the composition of this singular substance, belongs however to my illustrious and unfortunate friend, and indeed distant relative, the late Smithson Tennant." This gentleman was professor of Chemistry in the University of Cambridge,—he was the son of a Yorkshire clergyman,—was early in life deprived of his father; his mother was killed by being thrown from her horse, whilst riding beside him. He himself, by a similar accident, had his collar bone broken, many years after; and by a third remarkable coincidence, lost his life. But the story is singular;—I will tell it you.

Mr. Tennant and Baron Bulow, a German officer, after the peace in 1814, had been travelling on the continent, and arrived at Calais, with a view of crossing the channel to Dover; they were, however, detained several days by the inclemency of the weather. They attempted to get to Boulogne, to try the chance of a passage from there, but the vessel in which they embarked was forced to put back. To pass time, they agreed to take horses, look around the country and view a fort

near Bonaparte's pillar. At the entrance of this fort was a deep fosse, which was approached over a fixed bridge, and then over a drawbridge, that turned upon a pivot; the end nearest them was commonly fastened by a bolt, but it happened that this had been stolen a fortnight before, and had not been replaced. They did not discover this:—As the bridge was too narrow for both to ride abreast, the Baron went first, but perceiving that the bridge was sinking, he attempted to gallop over, and called to his friend to go back. It was too late; both were precipitated into the fosse, and though his companion was hardly hurt, Professor Tennant was taken up from under his horse, and died a few hours after.

The following is a list of the different papers published by Mr. Smithson, which are in my library. Beside these, there are many others in English and foreign journals, that I have not seen.

1. A few remarks relative to the coloring matter of some vegetables and insects.
2. Analysis of a saline substance, ejected from Mount Vesuvius.
3. On a substance from the elm tree, called ulmin.
4. On native hydrous aluminate of lead, or plomb. gomme.
5. On a native compound of sulphuret of lead and arsenic.
6. On a fibrous metallic copper.
7. On a native combination of sulphate of barium and fluoride of calcium.
8. On some capillary metallic tin.
9. On the detection of very minute quantities of arsenic and mercury.
10. Some improvements in common lamps.
11. On the crystalline form of ice.
12. On the means of discriminating between the sulphates of barium and strontium.
13. On the discovery of acids in mineral substances.
14. A discovery of chloride of potassium in the earth.
15. On an improved method of making coffee.
16. A method of fixing particles on the sappare.
17. On some compounds of fluorine.
18. An examination of some Egyptian colors.
19. Some observations on Mr. Penn's theory, concerning the formation of the Kirkdale cave.
20. Remarks on a balance.

The paper on Egyptian colors, contains some curious facts in reference to the pigments used by that ancient people for staining glass and painting generally.

His observations on Penn's theory, would be read with some interest,—they shew the author's physico-theological opinions on some contested points. The following are extracts—

"No observer of the earth can doubt that it has undergone very considerable changes. Its strata are everywhere broken and disordered, and in many of them are enclosed the remains of innumerable beings which once had life, and these beings appear to have been strangers to the climates, in which their remains now exist.

"In a book, held by a large portion of mankind to have been written from divine inspiration, an universal deluge is recorded. It was natural for the believers in this deluge, to refer to its action all or many of the phenomena in question, and the more so as they seemed to find in them a corroboration of the event.

"Accordingly, this is what was done as soon as any desire to account for these appearances on the earth became felt. The success however was not such as to obtain the general assent of the learned, and the attempt fell into neglect and oblivion.

"Able hands have lately undertaken the revival of this system. Mr. Penn has endeavored to reconcile it with the facts of the Kirkdale cave, which appeared to be strongly inimical to it.

"Acquainted with Mr. Penn's opinions only from the 'Analysis of the Supplement to the Comparative Estimate,' in the Journal of the Royal Institution, * * I have hesitated long about communicating the present observations, which presented themselves during the perusal of the above mentioned slender abstract.

"I have yielded to a sense of the importance of the subject in more than one respect, and of the uncertainty when I shall acquire ampler information at more voluminous sources—to a conviction that it is in his knowledge, that man has found his greatness and his happiness, the high superiority which he holds over the other animals which inhabit the earth with him, and consequently that no ignorance is probably without loss to him, no error without evil—and that it is therefore preferable to urge unwarranted doubts, which can only occasion additional light to become elicited, than to risk by silence to let a question settle to rest, while any unsupported assumptions are involved in it."

[I have taken the liberty of italicizing here, to call to your attention how deeply impressed was the mind of this man with the importance of the diffusion of **USEFUL PRACTICAL KNOWLEDGE**. A few years after, he leaves his whole fortune, to carry out the sentiment he here expresses.]

"The waters of the deluge had not surely either a duration or power to obtain the matter of this supposed layer of mud.

"No shores any longer existing, shells could not be pulverized by the beat of the wave, for it is not under deep water that such destruction is effected; nor, was it so, would the short period of a year have been sufficient to produce the material of all the secondary limestones of the earth.

"To have harrowed up this matter from the depths of the ocean, would have required an agitation of the waters which nothing warrants us in giving to them, which every thing denies their having had.

"No hurricanes, no tempestuous winds, no swollen billows are recorded. To drown mankind they were superfluous. A wind having arisen at the termination of the calamity, tells that none existed before; and this wind must have been a most gentle one, a very zephyr. A vessel bulky beyond all the efforts of imagination to figure—so laden, so manned—could not have lived in any agitated sea, least in one which out-topped the Andes and the Alps, and was able to resist all that curb its fury and could mitigate its violence.

"Had the ark not foundered, which is impossible, what yet had become of the millions which its sides enclosed? Few had survived to repair the effects of divine wrath.

"The waters must have been at rest, when the ark continued stationary for many months on the mountains of Ararat.

"Nor do the agitations of a sea, extend far below its

surface. What navigator has told of the storm, in which the sea became thick with its own sediments?

"But had such a deposit been made on our island, it would not have continued on it. Standing like a little turret in the bosom of the waters, each agitation of them would have precipitated part of it down its sides. Their gigantic tides must alone have washed it away, and on the rush of their final departure, not a vestige of it could possibly have remained behind."

"If the waters of the deluge placed a bed of calcareous matter all over England and Germany, they must have done so over the entire earth. It must have been an universal stratum."

"Yet so total was the deficiency of it at Botany bay, that the first settlers for the very little lime which a few structures of immediate necessity required, were compelled, though spare as were the hands, and much as they were wanted for other purposes, laboriously and tediously to collect shells along the beach. Where a limestone nodule was so anxiously sought, and could not be found, great strata could not be near."

"But the sediment of the deluge waters, would not be mere calcareous matter. It must have consisted of every thing they could receive, suspend and deposit."

"If over the whole earth, were spread such a layer of mire, Noah and the animals could not have landed upon it. Or, had they not sunk into it and been smothered, where yet had the weak found refuge from the voracious? where had the herbivorous found food?"

"What a time must have elapsed before Noah could cultivate the vine! Nor is it from such a soil that the wine would have intoxicated the holy patriarch. Had things so been, Ham had never offended, nor Canaan incurred the fatal curse."

* * * * *

Of the Deluge.

"Should every argument which has been adduced to establish that the animals were not brought from remote regions by water—that they lived and died in the countries in which their remains now lie—have appeared to be insufficient for the purpose; yet that it is not to the Mosaiical flood that their existence where they now are; is to be referred, two great facts appear to place beyond controversy."

"One is, the total absence in the fossil world of all human remains, of every vestige of man himself and of his arts."

"The magnitude of the chastisement, the order of nature subverted to produce it, proclaim the multitudes of the criminal. Human bodies by millions, must have covered the waters; they must have formed a material part, if not the principal one, of every group, and human bones be now consequently met with every where blended with those of animals."

"Objects of human industry and skill, must likewise continually occur among the bones. Of the miserable victims of the disaster, numbers would be clothed and have on their persons articles of the most imperishable materials, and the dog would retain his collar, the horse his bit and harness, the ox his yoke. To men who wrought iron and bronze, who manufactured harps and organs, these things must have been familiar."

"But more embalmed within the substance of the diluvian mud, entire cities with their monuments, with a great part of their inhabitants, with an infinity of

things to their use, would remain. Every limestone quarry should daily present us with some of these most precious of all antiquities, before which those of Italy and Egypt would shrink to nothing."

"How greatly must we regret that this is not the case—that we must relinquish the delightful hope, of some day finding in the body of a calcareous mountain, the city of Enoch built by Cain, at the very origin of the world. With what awful sentiments had not present generations contemplated objects, which had once been looked upon by eyes which had seen the Divinity."

"The other great fact which forcibly militates against the diluvian hypothesis, is that the fossil animals are not those which existed at the time of the deluge. The diluvian species must have been the same as the present. The multifarious wonders of the ark had, for sole object, their preservation; while of the fossil kinds not perhaps one, or quadruped, or bird, or fish, or shell, or insect, or plant is now alive."

"Amazing proofs of inundations at high levels, are appealed to. Had they being of the deluge, they could at most speak but of its existence—of its influence in the contested cases they would be silent—but it appears that this stupendous prodigy,

"Like the baseless fabric of a vision,
Left not a wreck behind."

"Of the occurrence of marine deposits at great altitudes, the elevation of the stratum by volcanic efforts furnishes a far more easy solution than the elevation of the sea; as it refers the phenomenon to a natural cause, and does not require the immediate interposition of the Divine hand; and the ruptured state and erect position of the strata on all these occasions, testify strongly in favor of the simpler supposition."

"To collate the Revered Volume with the Great Book of Nature, and show in their agreement One Author in both, was an undertaking worthy of the union of piety and science. If the result has not been what was anticipated—if we look in vain over the face of our globe for those mighty impressions of an universal deluge which reason tells us it must have produced and left behind itself—to some cause as out of the natural order of things as was that event, must this doubtless be attributed."

"By his entering into a covenant with man and brute animals, and having forever set his bow in the cloud, as a token that the direful scene should never be renewed, the Creator appears to have repined at the severity of his justice."

"The spectacle of a desolated world,—of fertility laid waste,—of the painful works of industry and genius overthrown,—of infantine innocence involved in indiscriminate misery with the hardened offender,—of brute nature, whose want of reason precluded it from the possibility of all offence, made to share in the forfeit of human depravity,—may be supposed to have touched his heart."

"Under the impression of these paternal feelings, to obliterate every trace of the frightful scourge, remove every remnant of the dreadful havoc, seem the natural effects of his benevolence and power. As a lesson to the races which were to issue from the loins of the few who had been spared,—races, which were to be wicked indeed as those who preceded them, but which were promised exemption from a like punishment,—to have preserved any memento of them would have been useless."

"To a miracle, then, which swept away all that could recall that day of death, when 'the windows of heaven were opened' upon mankind, we must refer what no natural means are adequate to explain."

I trust I have been able to cast some light on the character of this philanthropist and philosopher. If you think proper to publish any part of these facts in your excellent journal, they are entirely at your service. Erroneous impressions of the character of a good man, ought to be cleared away.

As to your second request, that I would indicate something of the nature of the proposed institution, if I can find time I will give you a few thoughts. A determination on this point is not difficult; we ought to be guided by the known wishes of the testator,—by the wants of education generally, and, lastly, by a consideration of what modifications are needed to make it harmonize with principles and institutions existing among us.

And believe me, yours truly,

Δ

EVE'S COMPLIMENT TO ADAM.

Sweet is the breath of morn, her rising sweet,
With charm of earliest birds; pleasant the sun,
When first on this delightful land he spreads
His orient beams, on herb, tree, fruit, and flower,
Glist'ning with dew; fragrant the fertile earth
After soft showers; and sweet the coming on
Of grateful evening mild; then silent night,
With this her solemn bird, and this fair moon,
And these the gems of Heav'n her starry train:
But neither breath of morn, when she ascends
With charm of earliest birds; nor rising sun
On this delightful land; nor herb, fruit, flower,
Glist'ning with dew; nor fragrance after showers,
Nor grateful evening mild; nor silent night,
With this her solemn bird, nor walk by moon,
Or glittering star-light, without Thee is sweet.

Milton, *Paradise Lost*, Book IV.

TRANSLATION INTO LATIN HEXAMETERS.

Dulce novi solis jubar, et prædulcis Eöus
Ortus; quum radiis rutilis hæc jugera ridet,
Lætantur segetes, et flores rore madentes,
Mellifluumque melos volucres é frondibus edunt.
Fertile post pluvias tellus juvat; Hesper amœnus
Adveniens juvat; et dulcissima pallida nox est,
Dum Philomela canit, facies dum splendida cœli
Sideriis rutilat gemmis, et luce Dianæ:
Sed mihi non Phœbi splendor, non ortus Eöus,
Non matutinâ ridentia jugera luce;
Non segetes lætæ, nec flores rore madentes,
Mellifluumve melos quod aves é frondibus edunt;
Post pluviam nec odor terræ, non Hesper amœnus
Adveniens, non ipsa juvat nox alma, micante
Cælo sideriis gemmis et luce Dianæ,
Nec Philomela juvat, sine te, charissime conjux!

C. W. M.

Washington, D. C. Nov. 1839.

THE AURORA.*

Mr. White: I pity the person who did not see the glories of the heavens on Tuesday night, the —th of November—still more the person who saw and did not wonder and adore. Being in the country, I had a chance to see all around me. You who are in the city are prisoned in by hot brick walls, so that many of you can only see directly over head. Permit me, therefore, to whisper into the ears of some of your readers, a feeble attempt at description of that which, even if seen by all, ought not to pass wholly without comment. For these things do not speak to us every night. They are as angel visits—and when they have gone, we feel indeed as if angels had been ministering unto us.

Early in the evening I was called out of the house by the exclamation of friends, "What is it?" I thought the sky was starry and perfectly cloudless—the air perfectly still. But what a sight was there! Had the fountains of morning burst out upon the night, in impatience or wild mischief? The whole heavens were wavering and spreading with broad streams of light, some of them of pure white, like moonlight upon snow; others of a deep, rosy, blushing red. These streams at first shot from the horizon around, upwards to the zenith, where they formed into a centre. Then, after remaining nearly motionless awhile, they shot downwards again; sometimes vanishing, and then re-appearing in full vividness and condensed into long bright bars of light. When united around the zenith, they looked like the interior of some glorious flower born in the skies—the night-blowing-cereus came to my mind, with the delicate tints of its deep fairy-like corolla. Now there came gushing up from the northeast, a flood of light of the deepest and most exquisite carnation. At first one might think a great conflagration was raging in that direction—but no!—that light is too pure—too ethereal. It is no earth-born fire—it is the element of the upper world. It broadens upward to the centre, like a great unfolding petal;—the east and northeast are blushing red. But off in the southwest, how intensely white the petal which is there let down! But did I compare this glory to a flower? No—it takes another form. It is a broad white and red curtain or veil let down, dimming the stars with a misty eclipse; and lo! a fringe to the curtain, of purple and orange—a rainbow for its hem! But this too changes—the curtain is gathering up in wavering fragments;—and now it seems a pouring shower or storm of light, almost dazzling the eye. Now it is like the fluttering of broad pennons—or that scene in the ancient Mariner, where

"The upper air burst into life,
And a thousand fire-flags shewn;
To and fro, they were hurried about,
And to and fro and in and out
The wan stars danced between."

Slender bars now shoot up, and vanish as quick. Now the light ripples upwards over the stars as over bright pebbles, in wavering, interrupted streamlets: now in mass, like some steady broad river current: and there seems a great reservoir at the zenith which this tide of light is journeying up to fill. But now the reservoir is full—the streams are pushed back again—the tide ebbs. The white light darts off like the forming of crystals, and becomes separated, and vanishes in the blue star-vault. Gradually, as the night wears late, the wavings of light grow less and less frequent and distinct—till nothing is left but a steady brightness around the horizon, like the light before moon-rise.

How noiseless all this ministry of the heavens—yet how eloquent! How full of beauty, of mystery!

Where is the way to the abode of light?
And darkness, where is its dwelling place?

Philosophy with rigid finger and cold eye may endeavor to point it out to us. But the heart turns away, enamored of the glowing apparition, and would rather take refuge in superstition, believing it a host of spirit forms, than hear it with complacent smile and unawed voice, pronounce it to be a display of the electric fluid; as if there ended all its meaning. O P. C.

* It is good for us, at times, to leave the limits of the dusky study filled with the creations of human wisdom—to leave the turmoil and glitter and hot atmosphere of the city—and go out and listen with an attentive ear to the teachings of nature, and gaze with subdued and throbbing hearts upon its wonderful workings. And here is a description written fresh after such an interview. It is as eloquent and as redolent of beauty as the Aurora itself.

PRIZE ADDRESS.

Written by *Dr Henry Myers*, of Richmond, Va., and pronounced by *Mrs. George Jones*, at the opening of the Avon Theatre in Norfolk, Va.

To him who grasp'd that magic wand, the pen,
And wove his spells around the hearts of men;
To him whose genius spread its mighty wing
From Heaven's high arch its richest tint to bring,
Or plunged "into the bottom of the deep"
To gather treasures that within it sleep;
Beneath whose sway e'en Passion fiercer grew,
Or weeded Sorrow wore a sadder hue;
Whose bidding drew from Pity's eye the tear,
Or Love made bold to clasp the one most dear;
At whose command Revenge swept to his prey,
Or cowering Fear in silence shrunk away:—
Grim Murder stood unmask'd—or Wit and Mirth
In merry mood drow peals of laughter forth:—
Even to him—to Avon's Bard we raise
The Muse's temple with the song of praise;
To glorious Shakespeare! for whose brow each brook
Nourish'd a garland in its shady nook;
Forest and mountain, verdant field and vale
Spread their bright blossoms to the passing gale:
And man, proud man, in admiration gazed,
The while the meteor undiminish'd blazed.

And where should Poesy select a home,
Or Talent seek to rear her glittering dome,
Save here?—where to the senses Ocean bears
Music which thrills the list'ner while he hears;
Where Heaven smiles with many a fadeless gem,
And Nature wears her brightest diadem;
Where erst the din of battle clove the air,
And watch-fires gleam'd with ghastly, lurid glare;
Where dealing death, th' artillery boom'd aloud,
And 'midst the flashes roll'd war's sulphur cloud;
When in each peal the song of Freedom rose,
Or rung the knell of Tyrants and of foes:—
The weary Drama perches on the spot,
Her pinions closed, and all her woes forgot.

Still, Avon! Fancy hies her to thy stream,
Whose waters with a thousand mem'ries teem;
Thou lav'st the birthplace of the good and great,
Thy banks are to the Poet consecrate.
The gazer turns from thee with moisten'd eye
To that lone spire towering towards the sky,
Which marks the spot, whereon its form uprears,
The Sepulchre of him the world reveres.
And yet, what tho' his bones lie mould'ring there?
Be silent all! his spirit hovers here!
A voice in upper air now floats along,
Yet dwells upon the ear like some sweet song.

What then remains? Speak, where does duty point?
Let us not say "the time is out of joint."
It is for us to watch the kindled flame
That writes in glowing characters his name;
It is for us to guard the altar's fire,
Not let it light the Drama's funeral pyre;
Enclose our shrine as with a human wall,
And save—or perish 'neath its mighty fall:
Yet fall it cannot, for, while Beauty cheers,
And native taste prevails—away with fears—
With generous patrons, such as greet her here,
The Drama smiles content,—her path is clear;
Thus welcom'd from the heart, she asks no more,
Her Mecca reach'd—her pilgrimage is o'er.

REJECTED ADDRESS.

Presented as a competitor for the prize offered for "the best address," on the opening of the "Avon Theatre," Norfolk.

BY A CITIZEN OF RICHMOND.

When storm and tempest sweep the troubled sky,
And the winged lightnings o'er the heavens' fly;
How bright to see, above the tempest's might,
The rainbow shed its soft and hallowed light,
Spanning in beauty every ill beneath,
Like Faith's calm smile above the couch of death.
Thus with the Drama when the spoiler's hand
Threw gloom and terror o'er each classic land;
When fettered Science wept and clanked her chain,
In the long night of Superstition's reign.—
But lo! the morn of Reason shed its ray,
And chased each fiend of midnight gloom away.
Then rose the Drama like a morning bird,
And waved its proud wing, and its song was heard
Like tones of mingled music; and it flew
To England's shores, and found a welcome too!
IMMORTAL SHAKESPEARE! to thy mind was given
To paint with pencil dipt in hues of heaven;
To soar aloft on bold and tireless wing,
And trace each passion to its hidden spring.
England may well be proud, that e'er she gave
That name to fame which triumphs o'er the grave:
Yea, towers may moulder, cenotaphs may fall,
But our own Shakespeare's name survives them all!
Yet not alone to England's isle belong
Th' undying triumphs of our Shakespeare's song:
Wherever mind immortal has a shrine—
A worshipper—oh, Bard, that land is thine!

Lo! here, in our own forest-land, we raise
An altar, and a temple to thy praise,—
And with them blend the dearest name on earth
To Poet's soul,—the spot that gave thee birth.
"Sweet Avon!" here thy classic shaft shall stand,
Like yon blest lighthouse on the wave-beat strand—
To guide the bark of Genius to the spot
Where worth is cherished, and its ills forgot.
And you, ye worthy sons of noble sires
Whose spirits glowed with freedom's hallowed fires,
And taught the Tyrant of a far off shore,
That God ordained—and his proud reign was o'er:
Say, will ye not, on this auspicious hour,
Cheer with your favor Avon's budding flower?
Say, will ye not your smiles, your sanction, give,
And bid the modest trembler bloom and live?
Shall cruel bigotry decree its death?
Shall Superstition's pestilential breath—
Shall the dark spirit of unhallowed thought—
Shall demon prejudice with malice fraught?
Shall wild fanaticism shriek its doom,
And mark our column as bright Genius' tomb?
Oh, no! we read the answer in your eyes
Which bids the glad song of our triumph rise!
And you, sweet sisters, with soft glance of light,
Man's sun by day, his star of joy by night;
Bright spirits, sent by mercy's guiding hand
To tell our souls of that "far better land;"
One smile from you, we ask one little smile,
To cheer our labors and our task beguile.
We see it beam, like love's all quick'ning glance
Above the death-couch and the dreamy trance;
We see it in one concentrated blaze—
A thousand bright eyes lend their kindling rays;
While hope's sweet voice, more sweet than Dorian reed,
Bids us look up!—we must, we shall succeed!

CATALEPSY.

[The readers of the Messenger will remember, that in our July number we published an article containing a somewhat extraordinary account of a case of Catalepsy, and that we vouched that its author was a gentleman of unimpeachable honor and veracity, and of high standing as a member of the medical profession. We said moreover, that if his statements were controverted, he pledged himself in a private letter to substantiate them by testimony of a high character. Those statements have been controverted by a writer in South Carolina, whose communication we lay before the public, and which, notwithstanding its anonymous character, we determined to submit to our medical friend and await his action on the subject. With the frankness and honor for which he is characterized, our friend and correspondent has come forward in his own proper person to vindicate his statements, and we do not hesitate to say that even "Doubt" can no longer be incredulous on the subject. Following the letter of the doubting South-Carolinian, we publish Dr. Buck's letter, with the certificate of Mr. Lay and the communication of Dr. Carmichael. Mr. Lay is well known in Richmond and his testimony is unimpeachable. Dr. Carmichael is an eminent practitioner of surgery and medicine.]—Editor.

SOUTH CAROLINA, OCT. 21, 1839.

Mr. White: The leading article in the July number of the Messenger, entitled "Catalepsy," has attracted much attention, and excited much animadversion. You have vouched for the respectability and veracity of the author. Yet so extraordinary, unnatural and incredible, are the circumstances narrated in his anonymous communication, that nothing accompanying its publication has been sufficient to remove skepticism from the minds of some, while the many express for the whole narrative nothing but unbelief.

If the circumstances as stated be true, they certainly do present some very extraordinary views of the nature and structure of mind, and of its relations with matter,—views totally at variance with all the received systems of mental philosophy. The operations of mind as detailed in that communication, are violations of every known and acknowledged law of the intellectual structure, and have no analogies but in the alleged phenomena of animal magnetism. I myself am one who will admit the possibility that there may be an abnormal state of the human mind, in which phenomena may be exhibited, not referable to its known laws of operation. I have seen too much on this subject, from well authenticated quarters, not to go thus far. At the same time, evidence, which, in relation to matters less extraordinary and unnatural, (as we would say in reference to the known laws of nature) would be sufficient to cause conviction, but when applied to phenomena like these, is insufficient to produce anything but doubt—a state in which the mind neither affirms nor denies the truth of the proposition.

If these are facts, the philosopher must begin his work anew; for no events like these have ever, heretofore, been even "dreamt of in our philosophy." The author of the article alluded to, in a note on the first page, declared (if his statement was received with doubt, or improbability) his ability and willingness to substantiate the whole of it, by the most irrefragable testimony. Now, in reference to the extraordinary part of his story, the most favorable comment I have heard upon it, was the expression of doubt as to the possibility of its truth, while many profess to have no other opinion on the subject, than that of unbelief. Under these circumstances, I think it would be as well for the author to lay his proofs before the public.

DOUBT.

WASHINGTON, D. C., NOV. 3, 1839.

Mr. T. W. White: When I communicated the article on "Catalepsy," I had no intention of disclosing my name, except to yourself and a few other friends.

But the letter under the signature of "Doubt," from South Carolina, expresses disbelief of the facts, because the commu-

nication was anonymous and unsustained by "evidence which, in relation to matters less extraordinary and unnatural, would be sufficient to produce conviction," and calls upon the author "to lay his proofs before the public."

I am, therefore, constrained to re-assert the truth of the facts under my proper signature, and to exhibit a part of the evidence which I could procure in relation to them.

The following is an extract of a letter addressed to me by a highly respectable Physician, who was in consultation with me in the case:

"The July number of the 'Southern Literary Messenger,' I have not been able to obtain until yesterday. I read with renewed interest the account therein published of a most extraordinary case of Catalepsy, which occurred in the daughter of one of my most intimate and esteemed friends, and almost under my own eye. With some of the facts related I was well acquainted from personal observation; and all the phenomena of this wonderful case, of which I was not an eye witness, were related to me as they occurred, by yourself and others who were then present.

"To some, (even of our own profession,) who may never have seen such a case, I should not be surprised if your account of it should appear marvellous, nay altogether incredible; but its fidelity, if questioned, can be verified by many most respectable witnesses, whose testimony (if their characters were known,) would remove every doubt."

I have also received a letter from a Professor of one of the first institutions of our country, who married a sister of the Cataleptic patient, and whose wife was in constant attendance during the progress of the disease. I extract the following:

"On returning from a long journey, which I have just completed, I found your acceptable letter and a pamphlet containing a paper on Catalepsy. This paper must be highly interesting to strangers, and is, of course, far more so to us who know the circumstances, however incredible, to be true. 'M.' (his wife) 'thinks that in one or two cases you have made the statements less wonderful than the facts would warrant, but I presume you feared to make the account too marvellous.'

"M.' (his wife) "says that she regrets that she has none of —'s writings, they are all in the possession of —." (another sister.)

I do not feel authorized to publish the names of these gentlemen, lest the intelligent and sensitive lady whose the subject of the article, might make inquiries which would lead to a discovery of her former affliction, of which, I believe, she is now ignorant. I will, however, enclose to you the letters, that you may be justified in assuring the public that they are genuine. The hand-writing is known to gentlemen in your city, which I will thank you to show them.

I also enclose the original letters of the lady. I could multiply proofs, if necessary (and there were no fears of imparting unpleasant information to the lady), but I feel assured that these will satisfy the public and remove the incredulity even of "Doubt."

Most respectfully,

MARCUS C. BUCK, M. D.

RICHMOND, VA., NOV. 14, 1839.

I certify that I have read the letter addressed to Dr. Marcus C. Buck by Professor J. W. B., with whose hand writing I am well acquainted, and declare that the following is a correct extract therefrom. "On returning from a long journey, which I have just completed, I found your very acceptable letter with the accompanying pamphlet containing your paper on Catalepsy. This paper must be deeply interesting to strangers, and is, of course, far more so to us who know the circumstances, however incredible, to be true. M. thinks that in one or two cases you have made the statement less wonderful than the facts would warrant, but I presume you feared to make the account too marvellous."

JOHN O. LAY.

RICHMOND, NOV. 15, 1839.

To T. W. WHITE, Esq.

Sir: The case detailed in your July number of the Messenger, on Catalepsy, from its unusual character, has been doubtfully received in and out of the profession.

This morning I had presented to me, the letter of an old and esteemed friend—long a successful practitioner of medicine, and a man of probity, and with whom I frequently met in professional duties, and to whose worth I make this tribute of respect,

confirming the statement of the author of that paper. "Having often," as he expresses it, "witnessed the extraordinary facts," and what he did not see, he heard from other sources of the highest credit. He goes further, and thinks that the marvellousness of the case exceeds the description given. His signature I know to be genuine.

To this statement I make an extract from a letter to me from the brother of the subject affected, now holding high official station :

"We concluded that you should address a letter to the Editor of the Southern Literary Messenger, affirming for us the truth of the account of Catalepsy, and to which my father, my brothers and sisters, have often stated as correct, with the exception of its being more wonderful than therein detailed."

Knowing all concerned in this report, it is but a proper duty on my part to make this statement, as they desire it, and to confirm the authenticity of the case.

Most respectfully, your ob't serv't,
EDWARD H. CARMICHAEL.

KOULI KHAN.

The attempts on India by the reigning sovereign of Persia bring to our recollection the fate of the most memorable of Persian warriors. In the year 1739, exactly a century ago, the famous Kouli Khan, the Shah of Persia, invaded India, and, after defeating the Mogul army in a great battle, took possession of Delhi. He spared the lives of the leading people, a singular instance of lenity in Asiatic war, and so wholly opposite to his own reckless polity, that it was accounted for only by a mysterious influence. But his original habits soon returned; and, on his determination being known to put a large number of the inhabitants of the capital to the sword, his tent was attacked by five Indians, in the midst of his army; and after a desperate defence, in which he killed two of them, he was struck to the heart.

The Persians are coming,
The Persians are come;
The banners are flying,
And thunders the drum;
And bright as a sunbeam
Rides forth in the van,
The king of all kings,
Kouli Khan, Kouli Khan!

The hills and the valleys
Of corpses are full;
There lies the pale Tartar,
There lies the Mogul.
There the elephant bleeds
From his forests afar;
For the arrows of Persia
Have finish'd the war.

And now with his omrahs
He sits on his throne,
With kings for his captains,
The East for his own.
The gems on his turban,
The gems on his shawl
Flash fire—but his glance
Flashes brighter than all.

There, proud Aurungzebe!
Stand thy princes in chains,
But, though fallen, they remember
Thy blood in their veins:
With toil and with battle
Their faces are wan;
But their frown is as haughty
As thine, Kouli Khan.

Then gazed the dark Sultan,
His bosom heaved high,
For he ponder'd the thought—
Shall they live? shall they die?
"Let them die"—from its scabbard
His dagger outsprang;
"Let them live"—in the scabbard
'Twas dash'd with a clang.

Then the herald came forth,
He thrice bow'd to the throne;
Like a pillar of topaz
He gloriously shone.
He thrice blew the trumpet,
The heavens gave reply;
Then proclaim'd to the captives,—
"Thus live, or thus die;—"

"The Shah asks three questions:—
If answer'd, ye stand;
If unanswer'd, ye fall—
Each head and each hand
On the ramparts of Delhi
Shall bleed to the sun;
This moment is yours—
Now, be saved, or undone!"

All was silent as midnight,
Then out broke the words—
"Hear, princes of Cachmire!
Hear, Delhi's proud lords!
The manes of your steeds
Are like banners unfurl'd;
But what hours would it cost you
To ride round the world?"

"Next, reckon the wealth
Of the king of all kings—
His crowns and his sceptres,
His arms and his rings.
Last, tell the high thought,
That now beams in his eye,
Or your death-lot is drawn,
There your corpses shall lie."

Then the squadrons of archers
Wheel'd round, wing to wing,
And a thousand keen arrows
Were laid on the string.
Yet there stood the princes,
Though fetter'd and lone,
In their ranks still and stately,
Like statues of stone.

"They must die." But a yell
Pierced thro' heart and thro' ear,
And wild as a leopard
In sprang a Faquier:
His visage was ebon,
His beard to the ground,
Wrath burn'd in his glance
As it darted around.

"Kouli Khan! thou art conqueror,
Sheathe thy red sword;
Kouli Khan! take thy choice,
To be cursed or adored!"
All gazed in strange wonder,
And dagger and spear
Were aim'd at his breast,
But loud laughed the Faquier.

"I will answer, dark Sultan,
Thy questions of blood."
His staff swept a ring
Round the spot where he stood.
Then he pour'd out a goblet,
And mutter'd a name;
To the gold-sculptured roof
Sprang a column of flame.

Then his voice spoke in thunder:
"What hours shall it take
To ride round the world?—
Dark Sultan, awake!
—Take the wings of the morning,
And ride with the sun,
In a day and a night
Shall thy journey be done!

"Then—what is thy wealth?
Were it mountains of gold,
'Tis not worth one true heart—
Now, two questions are told.
Hear the third. Is it evil,
Or good to forgive?—
Know that Hell gives us death,
But Heaven bids us live."

Then loud swell'd the trumpet,
And high clash'd the spear,
And a purse filled with diamonds
Was flung to the seer.
And to hail him the omrahs
And chieftans all ran,
And none look'd on the throne,
Though there sat Kouli Khan.

But one, and the proudest,
Dared pluck his white beard:
The Faquier shot a glance,
Not a murmur was heard!
But one grasp at his throat,
And the omrah lay low;
And the whole jewell'd circle
Recoil'd from the blow.

"Still the axe," said the Sultan,
"Must smite the Vizier,
For the blood of my bravest
Has reek'd on his spear."
"What, tiger! more blood?
Well, what prize shall be mine,
If he stand on this spot
Ere yon sun shall decline?"

"Take the half of my throne!"
—"Mighty Shah, he is here!"
—The beard was cast off,
But there stood no Faquier.
For the form bow'd to earth,
And the forehead so pale,
There stood in his beauty
A youth sheathed in mail.

Still brighter and brighter
He grew, while they gazed;
Still loftier his stature,
His eye keener blazed.
In his hand was the sword,
On his brow was the plume.
—Is he come from the skies,
Is he come from the tomb?

"I am Uriel," he spake—
From sultan to slave,
All were bow'd to the dust,
All was still as the grave—
"I am sent from the heights
Of the star-studded throne,
The Angel of Mercy,
To save the undone.

"They are saved—*Thou art saved!*
For each drop of their gore
Would have burn'd on thy soul,
Like the red molten ore.
Now, farewell, and be wise,
Thou son of the worm!"
—He upsprang, and the sound
Was like ocean in storm.

And the rolling of chariots,
And clanging of bows,
Of the warriors of heaven
Were heard as he rose:
And voices of sweetness
And sweepings of strings;
And the gleamings were seen
Of tiaras and wings.

And the perfumes of Paradise
Fell in a stream;
And their senses were steep'd
In delight, like a dream!
Then all woke.—For a year
The dagger was sheathed,
The hand of the bride
In the bridegroom's was wreathed.

And the vine hid the cottage,
The sheep fill'd the fold,
And the merchant was safe
With his silk and his gold.
And the infant was glad,
And the man without fear.
And age met the tomb,
Like the corn in the ear.

But then came dark Eblis,
The tempter of kings,
And the Sultan was wrapt
In the shade of his wings;
Wine madden'd his soul,
The fiend fill'd the man—
Thou'rt a corpse in thy tent,
Kouli Khan, Kouli Khan!

Revels at My Castle in the Air.

No. I.

A delicious Autumn day;—an Indian Summer day!
I have just returned from a stroll of some miles up
the country, leaving this bank-ridden town to take up
its notes—before three o'clock. I thank God now
every day, about noontide, that my lot has not been
cast on the Waters of Commerce; and that it has been
so ordered that I can pick up my bread and butter with-
out reference to price of Sugar or the rise of Stocks.

So—as I was saying—I started for a walk—and after
a long tramp over the Peninsula on whose slender
finger—fort McHENRY is set like a pretty mural ring,

I retraced my steps to the top of old "FEDERAL HILL," to behold one of the finest views of this charming town, lying round; and binding in, as with a hoop of dwellings, its beautiful harbor fringed with masts at this busy season, from Fell's Point to the innermost curve of the Basin. Beyond this watery line the town lies in the narrow valley, its regular lines broken by spires and towers and domes, whilst, immediately in the rear, rises an amphitheatre of hills of gentle slope, brown with the heathery hues of Autumn, dotted with white villas and cottages, and belted with

"—— the old patrician trees so great and good,
And thick plebeian underwood,
Where the poetic birds rejoice,
And, for their quiet nests, and plenteous food—
Pay, with their grateful voice!"

The trees about the City, and as far as the eye can reach along the shores of the bay and river, which steal like threads of silver all around this promontory, lacing the lawns and fields—the trees are in their richest livery—dying, like so many monarchs, in their most gorgeous attire. The *beech* is still brightly green, the *shumacher* has its crimson fringe, the *oak* its russet and the *hickory* its golden leaf;—and then the small *vines* cling like webs of fire to the evergreen *pin*s, overrun the crumbling banks of streamlets, or bind up, as it were, the wounds of fallen and decaying trunks. Here—is a patch of verdure untouched by the early frosts;—there—the new wheat, green as infancy in the lap of age;—beyond, glitters the stubble of last year's harvest; and over all is spread the gauzy veil of the Indian Summer air, softening the quiet landscape with its gold and purple mist. Every where there is a lavish magnificence of color and wavy ease of outline, to which the eye of a "city man" is entirely unaccustomed after gazing for a twelvemonth on bricks or granite, relieved only occasionally, by the tall, antique, formal, gothic, ungraciousness of *Poplars*—or the wilted foliage of dwarfish *elms*.

I know no town in our country, where hill and valley, water and woodland—the architectural grandeur of the Church and Column, and the matter-of-fact lines of the dwelling and warehouse—mingle so gracefully as they do in a beautiful picture—as seen from old "Federal Hill."

Let the Baltimoreans preserve this eminence as an antique MOUND MONUMENT—of which they may be as proud, as of the structures in marble, raised by their munificence to the Great and the Brave!

But verily a walk—a walk to the "old hill," createth an appetite! So, I went to dine, diving, with a bachelor's freedom, into one of those "conchological cabinets," as a wag called an oyster cellar. A Steak—a dozen of "York River," done with a pinch of salt, but no butter, in their own liquor, over a slow fire—and the repast crowned with a bunch of Grapes—an APPLE, and—a SHERRY COBBLER! Soft, sweet, luscious, loving, glorious, peaches,—a parting kiss—farewell, good bye to ye. The "last of your animal race," are bitter as ascetics—just like old maids, left too long on the bush—very yellow and devilish sour.

I have always been of opinion, hitherto—and I don't know but I think so yet—that APPLES were only made

for Eve to sin by, or to kick up the row among the goddesses on Mount Ida. I can't think they have done much good in the world, even when they caused Sir Isaac to discover gravitation. There is something repulsive to an ardent mind, in the calculating deliberation with which your apple seems to ripen. It convinces me, without tasting, of its cold bloodedness,—and I'm sure there is great analogy between fruit and "humans."

THE APPLE puts out his blossoms in early spring, bright and fresh,—scenting the air with sweet perfume, 'till away they are rifled by the ungentle wind. Weeks after, out swells a little green coated protuberance—like a minute emerald gem—on every twig, and, then, the airs come wooingly and nourishing, and the sun shines warmly, but he swells and fattens to his proper size with as much caution as an alderman afraid of apoplexy. One by one he hangs his rosy streaks, like threads of rubys, around his cheeks; or blushes, like a well trained woman, shade by shade, till the color flies down to his neck like steam. Pluck him not yet—'tis a deceitful blush. 'Tis no evidence of love or sweetness—no soft confession of passion's ripeness!—He's as sour as a critic—and will wrinkle your lips like a purse mouth. Days—months he takes to complete his education—to arrive at the perfection of his *mallic* intelligence! July, August, September, pour their showery tears, and kiss him with their warm wooing breath, yet he takes their advances with a sturdy bachelor's coldness. There he rests, swelling, drawing, sucking the sap from his parent tree, and coquetting with the sunlight through the pale green leaves; till, at length, on some gusty Autumn evening, when it gets too cold to be dangling like a felon from the naked bough, down he drops on the breast of his mother earth, returning like a prodigal, when forsaken by all others, to the heart that first warmed him into life. Down he drops, and soon is he drilled away among the bright uniformed ranks of his fellows, in some goodly housewife's garner—for the winter's stores.

Now sir, your Peach—or your Fig, or your Grape;—your Plum, or your Nectarine, or your Pear—are honest, impetuous, high-blooded CAVALIERS; not Philosophers or Hermits, like your Apple. Filling their veins with fiery juices in the early year, they rush in heaping crowds to our feasts the live-long Summer. Prodigal, open, generous, confiding gentry! Not hoarding their sweets, or dallying with the season, enjoying every fair day and gleam of sunshine, till the Autumn winds implore our compassion.

But if these excellent FRUIT PEOPLE—the grasshoppers of the orchard—sing out their Summer day in revelry—the Apple—poor gentleman—is not without his merits, too. Hath he not New-Ark Cider in his veins?

Pop!—phiz—z-z-z-z-z-z!—There's love in the glass!—Venus was not born of brighter foam!

Then the long Winter nights—the curtains let down—the sofa wheel'd round—the *hickory* blazing (confound your scorching anthracite)—the round table cleared of its literary rubbish—its Books of Beauty and Books of Loveliness, and gold-bound humbug,—and in place thereof—on its broad brown smiling face reposing the brilliant Astoral—the crystal glasses—the golden Madeira, whence the imprisoned light seems quivering,

struggling to be free—and the heaped baskets of Nuts and Apples. Apples—bright polished Apples—with their healthy Summer cheeks—witnesses of their quiet, temperate life—blushing with surprize at the goodly company and the warm welcome they receive, released from their cold prison in the garret. Then comes the gathering knot around the board, and the soft stolen pressure of the hand beneath it;—then the “naming of the Apple”—the peeling—the counting seeds—the telling fortunes—and then, “last stage of all,” the plunging of the knife into his very heart, and the passage of his pale remains over the ruby bridge of lips—through the ivory gate—and—and so—farewell!

I could write of “Michlemas Grove” and “Apple-sauce”—and “Apple-butter” and “Apple pies,” and “Apple dumplings”—aye—and “Apple toddy;”—but, I won’t dishonor the names of the abused fruit by torturing them through a purgatory of fire, or the debasing conceptions of the kitchen. I take leave of you, cold, worldly fruit, on a lady’s lip—with a merry party at your funeral—a ringing laugh for your dirge—and so write your decent epitaph!

Dry work this—Now for a SHERRY COBBLER!

Old Bachelor as I am, and vagrant, too;—without tie or home—I suppose I may be allowed to give the “receipt” for the greatest “liquorary” invention of the day. How happens it that ’twas not discovered before?—’Tis the most cooling, refreshing, luscious, un-intoxicating liquid, that ever grew into ripeness under the warm, fanciful incubation of a thirsty soul. Who claims the conception I know not; but, man or woman—the author (’tis a LITERARY treat) deserves well of his country for giving it to the people without the protection of copyright or patent. ’Tis a fragmentary world of sweets in a little palace of glass. “Waiter,—a SHERRY COBBLER!”

Powder your fine white sugar, or crystal candy, and sprinkle the mass through a sieve, over a tumbler of pounded ice—every particle of which is broken into lumps not larger than a pea. In another vessel, pour two wine glasses of pale gold sherry over the fine cut peelings of half a lemon—peelings which have suck’d into their pores sufficient acid from the ripened pulp, to make the pungent rind flavored like a China orange—and then, for a minute or so, suffer the spirit of the wine to extract the rich aroma. Next, dash the contents of one tumbler to the other, till fruit and fluid, ice and sugar, sweet and sour, warmth and frost, are mixed and married by this delicate “runaway” process, and the dew of their bridal-kiss coats the sides of the vessel with a creamy veil. Then—allowing the new married couples to cool from the first extatic moments of their swimming embrace,—you sip the delicious pair in the dreamy elysium of their “honey moon!” ’Tis a raving mad “receipt,” this—I know you will say so—but as a friend used to exclaim about my poor, dear mother’s Pigeon pies—“I’ll write poetry about it yet!”

Now—friend White—for a mild, brown, freckle-skin’d Havannah!—Sip—sip—and draw—draw—turn and turn about! As a *Siesta*, is the bright Angel that stands on the top-round of this sensual ladder of dreams. I bid you good bye—before I drop into her tender arms.

Addio—Addio!

B. M.

Baltimore, Nov. 1, 1839.

ISAIAH II. 4.

BY REV. E. H. CHAPIN.

And they shall beat their swords into ploughshares, and their spears into pruning-hooks: nation shall not lift up sword against nation, neither shall they learn war any more.

THERE sweeps a rush of armies past with banners proud and high,

And clarions waft their thrilling strains triumphant to the sky:

No dread munition in their ranks, no fearful steel, they bear;

No “warrior-garments rolled in blood,” no panoply they wear;

But on each brow the olive-wreath is twining fresh and green,

And in each lifted eye the light of peace and joy is seen;

And from ten thousand quivering lips there gushes forth the cry,—

“Let tears be dried, let sad hearts sing the song of victory!

Sing, by bright streams, on pleasant hills, and in the bowers of home;

Sing, by the altars and the hearths, the blessed time has come.

Our iron armor on the field lies bloodless all and crushed;

Our martial plumes are plucked and torn, our battle-

thunder hushed;

Our falchions we’ll to ploughshares turn,—the days of strife are o’er;

Our spears we’ll beat to pruning-hooks,—there shall be war no more!”

The weary soldier sits him down upon his threshold-stone,

And in his arms and to his heart he clasps his blooming son.

A soft, fair cheek is pressed to his, and in an upturned eye

A glistening tear melts to a smile—his wife is kneeling by;

While the aged grandsire bows his head, and his white and silvery hair

Is blending with the sunny locks of the little prattler there.

The palace-dome is lighted up, and its doors are open wide,

To welcome him who enters with his step of kingly pride;

But there’s no darkness on his brow and in his glance no wrath,

And lifted hands are pouring flowers and blessings on his path.

Both hut and hall are glad this hour: the city’s gilded fanes,

The hamlet spires, are echoing to the loud and billowy strains,—

“Our falchions we’ll to ploughshares turn,—the days of strife are o’er;

Our spears we’ll beat to pruning-hooks,—there shall be war no more!”

Gay barques, with music on their decks and pennons to the breeze,

And silks, and gold, and spices rare, are out on foamy seas:

Safely their bright prows cleave the waves: there is no foe to fear;

No murderous shot, no rude attack, no vengeful crew is near.

Where battle strode o’er ruined heaps, and carnage shook its brand,

And red blood gushed, the purple grapes and clustering harvest stand,

And dews from bending branches drip and quiver in the flowers,

And merry groups are rushing out from cots and shady
bowers :
"There is no sword our hearths to stain, no flame our
roofs to spoil ;
There are no robber-hordes to seize the treasures of our
toil :
Ho ! sing ye, then, the harvest-song, and twist the viny
leaves,
And let your shining sickles laugh among the plummy
sheaves,—
The falchions we'll to ploughshares turn,—the days of
strife are o'er ;
The spears we'll beat to pruning-hooks,—there shall be
war no more !"

Nation with nation strives no more : the golden chain
of love,
Through the wide earth, links soul to soul, descending
from above :
The Indian, by his hundred streams, the Tartar, in his
snows,
The Ethiop, 'neath the burning sun, its gentle impulse
knows :
From every tribe, in kneeling ranks, upon the silent air
Up to the "Throne of Thrones," go forth the sacred
words of prayer,—
"All praise to him, whose hand alone, whose own right
hand hath done
This blessed work, and made the hearts of all his chil-
dren one !"
Then, like the strains Ephratah heard hymned by the
angel choir,
From every lip a song breaks forth and sweeps o'er
every lyre ;
The peopled mart, the temple-arch sends out the jubi-
lee :
It echoes from the forest-shrines and green isles of the
sea,—
"Our falchions we'll to ploughshares turn,—the days
of strife are o'er ;
Our spears we'll beat to pruning-hooks,—there shall be
war no more !"

NEW WORKS.

Hyperion, a Romance ; by the Author of "Outre-Mer." New
York: S. Colman: 1839.

Literature owes its true charm to mind. This con-
stitutes its power and its imperishable beauty. This is
the cunning spell, the weird mystery, by which genius
thrills the rudest human heart, moves at its will the
vast physical strength of the multitude, and, beyond
death and in defiance of time, triumphs forever. This
is the reason why, in a thousand years to come, the
poems of old blind Homer shall be read by kindling
hearts and tuneful lips, and why, in all languages of
"the vocal earth," Shakspeare would be understood.
It is not enough that your book is "*well-written*," that
the rules of rhetoric are not violated, that the grammar
is all correct and the punctuation faultless. But breath-
ing thought, mental power, must be its *soul*, and without
this it is *lifeless*.

It is so with all art. You may take the rough stone
and chisel it into shape and resemblance. But this is
not enough. The colossal monuments of Egypt have
been thus wrought. And there they sit, stiff, upright,
and with their everlasting, stony, unearthly gaze. Yet
who admiring, as he must, the labor, and wondering at
the magnitude of the work, who glows with that en-

thusiasm which true genius ever excites as he pauses
to look upon them? But what is it that entrances soul
and sense, as you stand before a Phidian statue, or gaze
upon some creation of Angelo? What holds you there
with a mysterious, undefinable feeling, like that which
possesses one who is rooted to the spot by the meaning
smile and glittering eye of a Sybil? Is it the perfect
symmetry of the outstretched arm?—the exactness of
the brawny muscle?—the imperturbable expression
upon the face? Is it so much one or all of these, as it
is the mind, the creative intellect of the artist, that
breathes in every part and pervades the whole, and
tells us that there has been the hand of a master? And
is there nothing here but mere obedience to the rules of
art, to distinguish it from the copy of the amateur?—is
there nothing beside this, and the material, by which
you would know it from the plastered bust that is
hawked about the streets?

Genius, then, leaves its unfailing witness wherever
it lays its hand, and it can only be imitated or equalled
by genius. Hear this ye tribe of writers—ye troubled
with the "*cacathes scribendi*"—who crowd and glut the
market at the present day, and oppress us with novel,
essay, play, and poem—so that in this twofold *pressure*,
we look around us and know not which to deplore the
most, the scarcity of money or the scarcity of wit;—
hear this, although it comes from one who, perhaps,
lacks both as much as any among ye;—hear this, from
Oregon to the celestial Empire, from the centre of every
literary Emporium to the remotest garret in its Grub
street;—and be it remembered.

The great fault of the writers of our age, and for
aught that we know of every other, would seem to be
that they think authorship only *mechanical*. They
appear to suppose that it merely consists in obedience
to certain rules of composition; which may be learned
as easily as they would learn to dance by taking the
steps—"one, two, three, four." For instance—lines of
a certain length, ending, in course or alternately, or as
the case may be, in words that have a similar sound,
like "rhyme," and "chime," and "once" and "dunce,"
extended to a certain length, and filled up with words,
constitute a poem. Walker's rhyming dictionary and
Webster's quarto, will, therefore, "set up" a Poet. Or,
again; a story long enough to be eked out into two
volumes, with [*perhaps*] a plot, a hero and a heroine
and a few *et ceteras*, of which one of the most impor-
tant is a *publisher*, will surely inflict upon the public a
novel.

If such is not the actual reasoning, does it not seem to
be the principle upon which many writers virtually act?
As well attempt to become a Patrick Henry, by merely
practising declamation—or a Mozart, by only scraping
a violin!—But this is, after all, a serious subject. We
repeat the idea with which we set out. Mind is the
charm of true literature. It is not necessary that this
should be developed in the form of deep philosophy, of
profound reasoning, but, still, we say, a writer who
would attain just celebrity, must possess creative intel-
lect. If he would wear his laurels fresh amid all the
changes of life, and have them green around his tomb
in after ages, he must quaff from living streams of in-
spiration—he must go out under the holy stars, and
amid the free, glorious existences of nature; and he
must study human feeling in all its phases, its hidden

workings and its outward manifestations;—this must he do, until the depths of his soul are stirred, and the exhaustless springs of thought are quickened within him, and then he will be prepared to address the world with a heart throbbing and full of eloquent thoughts. He must have something to write about, and then what he writes will always be read. But, if he determines first to write and find a subject afterwards, ten to one, he lays hold of something common-place, uninteresting, or merely exciting, and when the world has become used to the glare of his book and ascertains that it is only caused by tinsel—when the excitement has passed by, or the melodious words become familiar—it will be pronounced dull and tedious; it will be forgotten and sent to Lethe. If such prove not the result, it may be he handles his subject so awkwardly (possessing not even the charm of manner,) that it drops still-born from the press.

The true writer, then, has something to write about. He is stirred by *thoughts*, and as they gush forth and find language he enstamps them as upon adamant. And in whatever form or connection he embodies them, they will distinguish him, they will constitute an essential part of the true literary excellence of his productions, they will gain him admiration from discriminating and kindred minds. Such an one, and such an one only, of all the aspirants for literary fame, will secure a reputation which shall survive his ashes and his marble monument.

Professor Longfellow's book, it is probable, will fail to please many. Those who are merely and strictly of the novel-reading class—who look with eagerness for incident and plot and dramatic effect, and are dissatisfied if they do not find them—will lay it down after they have read a few pages. But those who appreciate the creations of intellect, who love the stamp of genius and know it when they see it, will pore over its beautifully-printed pages with delight. Its plot is simple enough. A mere thread upon which the pearls are strung. But these *are* pearls. Hyperion gives full evidence that its author is a man of refined intellect—it bears the impress of which we have spoken—of *mind*. It will therefore be read, and it will survive the ephemeral productions of the day. But the plot, we say, is simple. We can present the reader with it in a few words. Flemming, the hero, a young American, oppressed with grief for the loss of a dear friend, makes a tour to Germany. Here he passes some time with a young German Baron, and then sets out for Switzerland. He falls in love there and is rejected—but the tone of his mind becomes, finally, restored, and the book leaves him on the eve of returning to his native land. This is the story, but this is the mere vehicle for beautiful simile, aphorism, thought and description. Extracts have already been made from this work to some extent, and we may, therefore, intrude upon the notice of our readers much that they have already seen; but we marked several passages as we went through it, without reference to these prior selections, and we shall therefore give a portion of them, and one or two which we have marked since, notwithstanding.

We direct attention to the following simile:

"The setting of a great hope is like the setting of the sun. The brightness of our life is gone. Shadows of evening fall around us, and the world seems but a dim reflection,—itself a

broader shadow. We look forward into the coming, lonely night. The soul withdraws into itself. Then stars arise, and the night is holy."

And to this personification of the Rhine:

"If I were a German I would be proud of it too; and of the clustering grapes, that hang about its temples, as it reels onward through vineyards, in a triumphal march, like Bacchus, crowned and drunken."

The author speaks thus of his hero:

"It would have been well if he could have forgotten the past; that he might not so mournfully have lived in it, but might have enjoyed and improved the present. But this his heart refused to do; and ever, as he floated upon the great sea of life, he looked down through the transparent waters, checkered with euphonia and shade, into the vast chambers of the mighty deep, in which his happier days had sunk, and wherein they were lying still visible, like golden sands, and precious stones, and pearls; and, half in despair, half in hope, he grasped downward after them again, and drew back his hand, filled only with seaweed, and dripping with briny tears!

"Yet there was much in him which was good; for underneath the flowers and green-ward of poetry, and the good principles which would have taken root, had he given them time, there lay a strong and healthy soil of common sense,—freshened by living springs of feeling, and enriched by many faded hopes, that had fallen upon it like dead leaves.

The following observations are upon Jean Paul Richter.

"When you read his works, it is as if you were climbing a high mountain, in merry company, to see the sun rise. At times you are enveloped in mist,—the morning wind sweeps by you with a shout,—you hear the far-off muttering thunders. Wide beneath you spreads the landscape,—field, meadow, town, and winding river. The ringing of distant church-bells, or the sound of solemn village clock, reaches you;—then arises the sweet and manifold fragrance of flowers,—the birds begin to sing,—the vapors roll away,—up comes the glorious sun,—you revel like the lark in the sunshine and bright blue heaven, and all is a delicious dream of soul and sense,—when suddenly a friend at your elbow laughs aloud, and offers you a piece of Bologna sausage. As in real life, so in his writings,—the serious and the comic, the sublime and the grotesque, the pathetic and the ludicrous are mingled together. At times he is sententious, energetic, simple; then again, obscure and diffuse. His thoughts are like mummies embalmed in spices, and wrapped about with curious envelopments; but within these the thoughts themselves are kings. At times glad, beautiful images, airy forms, move by you, graceful, harmonious;—at times the glaring, wild-looking fancies, chained together by hyphens, brackets, and dashes, brave and base, high and low, all in their motley dresses go sweeping down the dusty page, like the galley-slaves, that sweep the streets of Rome, where you may chance to see the nobleman and the peasant manacled together."

A magnificent description of winter:

"And ever faster fell the snow, a roaring torrent from those mountainous clouds. The setting sun glared wildly from the summit of the hills, and sank like a burning ship at sea, wrecked in the tempest. Thus the evening set in; and winter stood at the gate wagging his white and shaggy beard, like an old harper, chanting an old rhyme:—'How cold it is! how cold it is!'"

We pass over much that we had marked of the conversation between Flemming and his German friend, the Baron, simply because our limits will not admit of their insertion, and proceed to the following from the reverie of the former:

"It has become a common saying, that men of genius are always in advance of their age; which is true. There is something equally true, yet not so common; namely, that, of these men of genius, the best and bravest are in advance not only of their own age, but of every age. As the German prose-poet says, every possible future is behind them. We cannot suppose, that a period of time will ever come, when the world, or any considerable portion of it shall have come up abreast with these great minds, so as fully to comprehend them.

"And oh! how majestically they walk in history; some like the sun, with all his travelling glories round him; others wrapped in gloom, yet glorious as a night with stars. Through the else silent darkness of the past, the spirit hears their slow and solemn footsteps. Onward they pass, like those hoary elders seen in the sublime vision of an earthly Paradise, attendant angels bearing golden lights before them, and, above and behind, the whole air painted with seven listed colors, as from the trail of pencils?"

A description of a spring night:

"And at night so cloudless and so still! Not a voice of living thing,—not a whisper of leaf or waving bough,—not a breath of wind,—not a sound upon the earth nor in the air! And overhead bends the blue sky, dewy and soft, and radiant with innumerable stars, like the inverted bell of some blue flower, sprinkled with golden dust, and breathing fragrance. Or if the heavens are overcast, it is no wild storm of wind and rain; but clouds that melt and fall in showers. One does not wish to sleep; but lies awake to hear the pleasant sound of the dropping rain."

Ballads, the Baron says,

"Are the gypsy-children of song, born under green hedges, in the leafy lanes and by-paths of literature,—in the genial summer time."

Flemming thus remarks of a tree, that had been transplanted from America to the gardens of the Palatinate:

"It reminds me of some captive monarch of a savage tribe, brought over the vast ocean for a show, and chained in the public market-place of the city, disdainfully silent, or breathing only in melancholy accents a prayer for his native forest, a longing to be free."

Here is a truth which it may be well to remember, and therefore we set it down:

"There are many speculations in Literature, Philosophy, and Religion, which, though pleasant to walk in, and lying under the shadow of great names, yet lead to no important result."

The glacier of the Rhone:

"Ere long he reached the magnificent glacier of the Rhone; a frozen cataract, more than two thousand feet in height, and many miles broad at its base. It fills the whole valley between two mountains, running back to their summits. At the base it is arched, like a dome; and above, jagged and rough, and resembles a mass of gigantic crystals, of a pale emerald tint, mingled with white. A snowy crust covers its surface; but at every rent and crevice the pale green ice shines clear in the sun. Its shape is that of a glove, lying with the palm downwards, and the fingers crooked and close together. It is a gauntlet of ice, which, centuries ago, Winter, the King of these mountains, threw down in defiance to the Sun; and year by year the Sun strives in vain to lift it from the ground on the point of his glittering spear."

Thus discourses the heroine, Mary Ashburton:

"And why need one always explain? Some feelings are quite untranslatable. No language has yet been found for them. They gleam upon us beautifully through the dim twilight of fancy, and yet, when we bring them close to us, and hold them up to the light of reason, lose their beauty, all at once; just as glow-worms, which gleam with such a spiritual light in the shadows of evening, when brought in where the candles are lighted, are found to be only worms, like so many others."

And thus discourses the author, we believe, in *propria persona*.

"The shadows of the mind are like those of the body. In the morning of life they all lie behind us; at noon, we trample them under foot; and in the evening they stretch long, broad, and deepening before us. Are not, then, the sorrows of childhood as dark as those of age? Are not the morning shadows of life as deep and broad as those of its evening? Yes; but morning shadows soon fade away, while those of evening reach forward into the night and mingle with the coming darkness."

How simple, how natural, how affecting, the piety of this poor woman:

"Her heart was a passion-flower, bearing within it the crown of thorns and the cross of Christ. Her ideas of Heaven were

few and simple. She rejected the doctrine that it was a place of constant activity, and not of repose, and believed, that, when she at length reached it, she should work no more, but sit always in a clean white apron, and sing psalms."

A true simile this:

"No more! O how majestically mournful are those words! They sound like the roar of the wind through a forest of pines!"

We assure our readers that we have gathered, as it were, from *clusters*;—we have omitted much, for reasons already given. With these remarks, we take our leave of Hyperion, heartily commending it to the public as a book worth reading and re-reading.

General Instructions to the Consuls and Commercial Agents of the United States. Blair & Rives: Washington, 1839.

A small pamphlet, with the above title, has recently come under our observation. It is intended that these instructions should supersede all others by which these officers have heretofore been guided. If these laws are in an amended state, it is difficult for us to fancy how imperfect the others may have been which preceded them; we still look upon the whole consular system as being imperfect, and wanting a thorough revision. No improvement, however, can be expected until the subject is brought before Congress, and a committee appointed to recommend another code, which shall be more equal in its bearing—more agreeable to our merchants—and more palatable to most of our consuls.

The two main pillars of our constitution are, liberty and equality; and, singular as it may appear, the consuls are the only class of officers in the service of their country, who may truly be said to enjoy neither of these desirable features of our republican creed. The officers of the army and navy of the United States, are appointed yearly; and as time passes on they advance in rank. There is with them, so long as they conduct themselves properly, no fear of being turned out of office, or no chance of being superseded by those whose commissions may be of a more recent date. Each one is sure, should he live long enough, to reach the highest grade of his profession. With him there is some hope—some cause for ambition; but with the foreign representatives of our country none. No consul, however unexceptionable his conduct may be, is certain of retaining his office for a single year. In those situations in which a good income may be realized, the appointment will be made a political gift; and as nothing is more changeable than popular feeling, nothing can be more uncertain than the period for which a consul, holding such a situation, may retain his place. When a person has remained for a length of time in office he becomes acquainted with the duties of his situation, and ought not to be removed to make place for another who may be totally ignorant of them; and when it is more than an equal chance, that the incumbent to be displaced may be thrown upon the world too old to enter upon any other profession, and without any means of support for himself or family. Most of the consuls, whose places are worth taking, are every day liable to meet with this reverse of fortune.

Between one consul and another there is no equality. This will be proved by an example. 'Tis true both are allowed the same name, and are permitted to wear the

same uniform, but in that which seriously concerns both there will not be found the least resemblance. We have reference to their fees. The revenues of the office at L—, are at least from six to eight thousand dollars a year, while those at N— may be from five to six hundred. The one incumbent gets all his fees from shipping, while the other, until recently, has procured his by taxing the passports of his countrymen. We notice by these last Instructions, that this charge on passports is annulled, and consequently the consul who has for the last twenty years held the office at N—, so honorably to himself and all Americans, is deprived of his only revenue, and has his yearly fees reduced from five hundred dollars to ten,—while his colleague at L—, against whose official conduct we have nought to say, has suffered no diminution of his enormous revenues, and this while not having served his country for half the period of him whom we have instanced above. This is not a solitary case—we might instance all from the highest to the lowest,—and it would appear that there is no equality save in the honor—which will hardly support a worthy man. When a consul receives his appointment, he is placed under bonds from two to ten thousand dollars, and obliged to give sureties for the faithful performance of his duties. Why should there be a difference made in the amount of bonds between one of these officers and another? If both are not equally trustworthy, why employ the one against whose character there may be a shadow of a doubt? If it is to secure Americans against fraud,—for instances have recently been seen where those who were thought to be the most trustworthy have abused public confidence, become defaulters, and fled their country,—then, these bonds, on account of their trifling amount, are no security; for, when compared with the value of American property, which yearly arrives at some ports, they are but as a drop of water to the running stream.

Early in the spring of 1833, a message was sent by the President to the Senate, wholly touching upon the consular establishment of the United States. This was evidently done at the instance of the late lamented Hon. Edward Livingston, who was at that time Secretary of State, and to whom it was necessary all consular correspondence should be sent, and all complaints of captains and merchants be made known. Coinciding as we do with the opinions of Mr. Livingston, as then expressed, we cannot do better than quote several passages of his letter to Gen. Jackson, which was published at the time the message was sent to Congress.

"To a nation essentially commercial, like the United States, the consular functions are highly important, and ought to be strictly defined. They are performed in a foreign country, often in collision with the officers of the nation in which they are placed, and therefore public as well as private interests are put in jeopardy by their errors or faults. At home every officer is surrounded with the means of obtaining information, yet at home every officer has his duties prescribed, and marked out by law. Abroad, an officer is entrusted with the most important functions, out of the reach of control or advice, and is left with comparatively no written rules for his guidance. In their absence, he frequently puts such constructions on his power as best suits his interests, and avoids taking any responsibility that is not forced upon him. No written rule being given to which the merchant or ship-master can refer in his transactions with consuls, constant bicker-

ings are the result—injurious alike to the interests of trade and the reputation of the country.

"The subject of compensation is one which has engaged my close attention since I have had the direction of the department; and I have no hesitation in giving a decided opinion, that the exaction of fees has been the source of misunderstandings between our consuls and the masters of vessels, injurious to the reputation of the country—that it is degrading to the officer who is obliged to wrangle for them, is unequal in its operation, oppressive to our commerce, and ought either to be wholly abolished, or so modified, as to make the operation of the system more equal, by apportioning the amount to the size of the vessel, or if possible to the value of the cargo."

Many of the vessels engaged in foreign commerce, are owned, in a greater or less proportion, by the masters who navigate them. This is the most fruitful source of complaint between themselves and the consuls. The captains looking upon the fees charged as an unjust tax upon commerce, (and they are not alone, for most of the mercantile community have the same opinion,) are not disposed very readily to settle their accounts. This causes the misunderstanding. The captain, in many instances, makes his complaint before foreigners, which serves to degrade the standing and character of the consul before those people who ought to respect him; while the officer, on his part, vainly appeals to his government—which cannot relieve him—as in most cases no law has been passed touching directly on the subject.

Mr. Livingston continues: "But I cannot avoid expressing my opinion that these officers, like all others, should be compensated by adequate salaries, and should be prevented from engaging in commerce. According to our present system, our consuls, with very few exceptions, are commission merchants—anxious like all other merchants to increase their business, and obtain consignments. In many, perhaps in the greatest number of cases, the place is sought for chiefly for the advantage and influence it will give to extend the commercial affairs of the officer. Can it be believed that this official influence will always be properly exercised? When it is, will not contrary suspicions be entertained? This must create jealousy, detraction, and all the arts that rivalry will exercise and provoke, amidst which the dignity of the public officer is degraded, and his influence with the foreign functionary lost. The consul therefore, if not the vice consul, ought to be salaried officers. They will never then by their countrymen be suspected of acting towards them, as their commercial interest, not as their duty requires; and their complaints in behalf of their fellow-citizens will be attended to, because they will not be liable to the suspicion of advocating their own interests. Consular offices would no longer be held in counting houses, nor the consul himself called, from defending the case of an injured American citizen, to sell a barrel of sugar, or despatch the settlement of an account."

Forcible as this language of Mr. Livingston may appear, yet most of the Americans who have travelled abroad must acknowledge it is not at all too strong. We may venture to assert, after a ten years residence in Europe and the East, that there is not a single commercial town in any part of the world, where there is much American commerce, and the consul a mercantile man, but that weekly if not daily difficulties arise between this officer, his countrymen, and the merchants of the place. This must always be the case while the consular system remains as it is. The reasons are obvious. From the captains are received the fees of

office—the payment of which is causing continual bickerings, while the merchants are jealous, and naturally so, on account of the information which they are obliged by law to give to the consuls, exposing as they must to his examination, their invoices of property shipped, to whom it is consigned, with the value, quantity, and quality of the same. This state of things gives a severe blow to commerce. Secrecy, that great incitement to speculation, is destroyed—and in the end a great loss must fall on the revenue of the country.

We will only make one more extract from the letter before us. "All fees paid to public officers are taxes; fees to consuls are taxes on commerce. Are such fees in the state of our finances necessary? Are they just? Are they equal? Are they easily collected? None of these questions can be answered in the affirmative. They are certainly not necessary; the customs alone produce more than enough for the payment of all the expenses of government. Why should an extra tax be laid upon commerce, which already bears the whole expense of government, for the support of a particular set of officers? Should it be said that those who derive the benefit should pay the expenses, it would not seem to be a satisfactory answer. It is not for the sole benefit of a ship which touches at a consular port, that the consular office is created: the whole country is interested in the establishment. The concerns of its general commerce, the protection of its citizens abroad, its reputation is concerned. The judge receives his salary, yet not one-tenth of the community are suiters in court. So of all the salaried officers of government; all the exceptions to the rule are *abused*. It is easily conceived, that in the infancy of our government, when we were burdened with a great amount of public debt, every available mode of supporting the different institutions of the country should be resorted to, and that therefore the examples set by other nations of supporting particular offices, by the exaction of fees, should be followed: but now, when one uniform mode of collecting revenue yields a product more than sufficient for all the wants of government, why should others, liable to so many objections, be continued? Nor ought the amount to deter us? According to the list hereunto annexed, we have one hundred and fifty-six consuls, vice consuls, and commercial agents. By a proper distribution, they may be classed as follows:

Thirty consuls, with salaries, averaging \$2,000, will amount to	\$60,000
One hundred and twenty-six vice consuls, and commercial agents, with salaries averaging \$1,000, is	\$126,000
Total annual sum,	\$186,000

When it is considered, that not only the respectability of our government and the security of its citizens abroad, will be promoted by this change, but that it is chiefly intended for the protection and extension of that commerce, from which the only revenue of the country is derived, the expense will not be thought too great for the object. Such a provision ought to be accompanied by prohibition of any interest in commerce, with clear definitions of official duty, and heavy penalties for neglecting them: and we then might see these important offices filled, as they should be, by men of talent, education and respectability of character, who would command the respect of the functionaries of the ports in which they reside, who would be the protectors, not the rivals of our merchants, do honor to our national character, and whose whole time would be devoted to the duties of their office."

Although seven years have nearly transpired since these opinions were expressed by Mr. Livingston to the President and Senate of the United States, yet no debate has been had upon them, no alterations made. Our commerce and revenue have greatly increased,—so have

the difficulties of our consuls, and the misunderstandings and bickerings of our countrymen with them. We have finished with our extracts from Mr. Livingston's letter, and though this distinguished statesman and learned jurist has, since it was written, been summoned full of years and honors to his fathers, yet may we not hope that some other public spirited individual will be found to bring the subject forward in the councils of our country, and urge that salaries may be allowed to our consuls, and necessary laws be passed for their guidance? The great reason why no alteration has yet been made in the manner of remunerating consuls for their services is, because many of these officers are opposed to any change in the present system, preferring a limited amount with a liberty to trade, to a certain sum—even if much larger than their annual fees—accompanied with a prohibition to their engaging in commerce. Should salaries be voted to consuls, many now holding the office would immediately resign. If a person prefers his chance in commerce to an office with a fair salary, let him retire, and some one holding a different opinion be selected to fill the vacancy,—all parties will then be satisfied: the one who leaves his office, must consider himself fortunate that he can do better in a pecuniary way than retain it, while the one appointed will rejoice that he can obtain an honorable living, and at the same time be respectably employed in the service of his country.

While our consular system remains unaltered, at least a third, if not a half of the incumbents of these offices, will be foreigners. Republican America will continue to be represented, as she now is, by the subjects of kings, princes, and pashas, many of whom by having the star spangled banner waving over their houses, might obtain an undeserved credit with capitalists, find protection in case of a revolution, or be enabled to traffic without the payment of duties. How is it, may we ask, that without a single American resident in Egypt, so many boats are observed plying on the Nile under the American flag? Do they belong to travellers, citizens of the United States, or are they laden with merchandise? If to the former, then it is a matter of pride that so many of our countrymen should be found travelling in so interesting a region, but if the latter, then we may inquire if the same is done with the sanction of our government? Is our flag used to cover foreign property? Is any encouragement given to owners of property to have the same flying over the boat which carries it? Are boats with the American flag hired to foreign travellers, they preferring the same to their own on account of the protection which it affords them in the present state of European politics? These are queries we hope to see satisfactorily answered. But there are other reasons why foreigners should not be permitted to act as consuls. England has recently seen the error of it, by having a Frenchman a vice consul to represent her in Mexico, and in the event of a war we may be placed in the same situation. In case the French had refused to pay the debt due by them to our citizens, or England should decline satisfactorily to settle our boundary question, and hostilities commence, would a subject of either of these powers dare to assist our countrymen to the prejudice of his own? And again, is not an Englishman holding an appointment as United States consul, at all times

subject to the English consul, who may be living in the same place with him? He most certainly is; and we are aware of an instance where the same was made known to a person who chanced to be in this situation, and to the authorities of the place where he resided. Out of England, Ireland, and Scotland, we would wish to be informed how many Englishmen are now acting as American consuls—and the places also, if of importance to our commerce? In the Mediterranean, we are aware of our being represented by them at the ports of Genoa, Trieste, and Alexandria. We do not say that the incumbents are not respectable men, or that they do not perform their duties faithfully,—but we do ask, if in places of such extensive trade it is necessary to have the merchants of England to represent us? How many Americans have we, either at home or abroad, acting as English consuls? We know not one. Let Republican America be represented by freemen, sons of her own; and should the nation ever become subservient to another power, then, and not till then, will it be proper to have a subject of that power appointed to represent us. Allowing it possible for an Englishman—for we are not more opposed to a subject of Queen Victoria (perhaps it might be more gallant in us to have a preference,) than to any other foreigner who may acknowledge a crowned head for his master or mistress—to be a proper representative for the United States, yet we think before such an appointment is made, some laws should be passed, by which our countrymen may know how they are to be governed when they arrive in places under such jurisdiction; and again, in case such an officer should abuse his authority, that our government might find means of redress.

It has been said that were the consuls salaried officers, too much power would be given to the Executive—but this objection can be easily removed; for were these officers to hold their appointments so long as they conducted themselves properly, few, very few vacancies would occur during the four years a President might serve. The Executive has much more power at present—as it can remove, and appoint at pleasure.

We would now say a word on the subject of the allowances to consuls, for the expenses which they must actually incur on account of the offices they hold. As the reader might doubt our statement, we shall quote the ninth chapter of consular instructions entire.

"Of the expenses to be allowed to Consuls."

"Art. 49.—Postage paid on despatches to or from this department, or expenses incurred for their transmission when directed, will be allowed on the rendition of a specific account therefor, accompanied when practicable with vouchers, but no allowance will be made for house, or office rent, books, stationary, or other ordinary expenses of office."

"Art. 50.—No allowances will be made to consuls for expenses incurred in procuring the defence in any court of law of American seamen, accused of violating the laws of foreign countries."

Is it reasonable, we would ask, that in the present prosperous state of our finances, such orders should exist?

Thus it will be seen, that the expenses of office rent, clerk hire, books in which all public documents are to be registered, desks in which the consular archives are to be deposited, and the very paper on which official despatches are to be sent to the Department of State,

must, one and all, be the gift of the consul to the United States. The Mahomedan powers of India and the Levant we are informed, are more liberal in their allowances to their agents.

In the 49th article, an acknowledgment is made, that expenses are incurred for the public service, and yet the same will not be reimbursed to those who incur them.

With one more query, we shall have done;—why should consuls be prohibited from receiving presents from crowned heads and foreign states, if while holding their offices they are yearly obliged to make such paltry presents to their own government?

We have entered much more fully into the subject of our consular system than we at first intended. The more we have considered the small pamphlet before us, the more we have been induced to extend our remarks, and expose, what we conceive to be the errors of our consular code. We can only hope that some alterations will be made, without which, it is our humble opinion, that our countrymen abroad will never be respected, or the public duties faithfully performed.

The Tusculan questions of Marcus Tullius Cicero. Translated by George Alexander Ogle, Esq. member of the American Philosophical Society; translator of Botta's history of the war of American Independence. Boston: James B. Dow, 1839. pp. 316. 8vo.

The eloquence of Cicero is perhaps the widest basis of his fame; but we shall do him great injustice if we look upon him merely as a finished orator. As a statesman and a philosopher he is scarcely less illustrious. His success in politics is the more to be admired, because attained notwithstanding such infirmities of temper as would have been insuperable difficulties to minds of a lower order. He was timid and wavering in an age of civil strife, when power is rarely reached but by spirits of the sternest cast; and his arrogant vanity and strong sarcastic wit, which prudence never taught him to restrain or conceal, made him many enemies among the proud and powerful. Superadded to this, he was lowly born, and had to contend with the prejudices of the aristocracy, which of course sought to reserve the highest dignities of state for men of noble birth. Yet the force of his genius, in defiance of all obstacles, procured him successively every high office of the republic, and placed him at last in a station of perhaps more power and influence than were enjoyed by any of his contemporaries, except the great dictator. We have at present, however, to consider him, not as a politician but as a philosopher, in which character he is the first of the Romans and takes his stand among the proudest of the Greeks.

In poetry and all the works of taste and fancy the ancients are equal if not superior to the moderns; but the case is widely different in philosophy, which is the work of the reasoning powers alone. The cause of this difference is apparent on a little reflection. Poetry is a thing of sentiment rather than of reasoning; and as the feelings to which it appeals are mostly native to the heart, or spring from associations produced by those general relations of life in which man as a social being is always placed, it follows that the art of poetry cannot be progressive, and that the fictions of one age must retain for all generations a portion of the interest they excited in those for whom they were first intended.

But the part of philosophy is to discover truth as it exists in nature, without regard to fancy or opinion; and as truth is fixed and immutable, every discovery is a distinct step permanently gained, which in its turn becomes the vantage ground of farther investigation. And thus, however great the progress made by the men of one age in the pursuit of truth, their limit of knowledge is the point from which the next generation proceeds in research; and their names and works are destined to become of little use to mankind, except as they serve to mark the progress of science. For this reason, the philosophy of the ancients is chiefly valuable to us as matter of history and for the study of the human mind; and viewed in this light, even the numberless errors contained in their works are so many materials of useful information, since the history of error, if fairly made, would be no less instructive than the annals of truth.

As a repository of philosophical opinions, the works of Cicero are especially valuable. A free thinker in philosophy,* and bound by the tenets of no one sect, he was at liberty to choose from each whatever opinions were recommended to his mind by apparent probability or the weight of authority; and his respect for distinguished names led him to review and canvass the various dogmas of all the Greek philosophers. His multiplied reading enabled him to fortify his opinions with abundant learning of this nature, which affords us information that we should in vain seek to find elsewhere. Many a name once high and reverend among the sages of the day might have perished from the earth, had it not been preserved by Cicero, together with some traces of the tenets to which its sanction was lent.

His reverence for authority, however, we must confess, had a most unhappy effect on his own mind. He was by nature perhaps inclined to skepticism; and this spirit was strengthened by a deference to the opinions of others which often unsettled his own judgment, as is strikingly evident from his confession, that "doubting, inquiring, hesitating, and perplexed by contending authorities, he is carried about like a floating raft on the waste ocean."† Hence, notwithstanding the frequent and decisive expressions of his belief in the immortality of the soul, which we find in the first book of his *Tusculan questions*, near the end of the work he seeks a solace for the ills of life in the hope that death will close all feeling in eternal sleep: and in the work "on the nature of the gods," the strong and beautiful argument of one of the interlocutors for a directing providence, is met by another with such zeal and ingenuity that the reader is left in doubt which side to choose as containing the author's own creed. To the same cause we may ascribe the avowal that "he would rather err with Plato than be in the right without him;"‡ and also, that he had sought his opinions from the remotest antiquity, since truth was found purer as the approach was nearer to the sacred spring of all truth.§ Maxims like this kept the human mind in the slavery of opinion for more than twenty centuries, till the genius of Bacon broke the fetters by showing that the authority of wisdom drawn from long experience, which had been given the ancients, was of right due to the latest age of the world.

But this fault of Cicero's mind (if we may venture to call it such) will never diminish the value of his writings; for his errors can mislead no one in the present day, and without the ample store of names and opinions which his love of authority induced him to gather, we should know much less of the character and progress of the ancient philosophy than we do at present. And if his works give us little aid in ethics or divinity, they will at least serve to show the wanderings of the natural mind amidst the darkness of paganism and the delusions of a false philosophy. Nor can we, perhaps, duly estimate the light of christianity, till we see his noble intellect the sport of opinion and the prey of doubt on points of such moment to the conduct and happiness of life.

The age in which he lived was signally venal and corrupt. Large fortunes were made by the most shameless oppression and bribery; and very few who had the power were found to resist the temptation of amassing wealth by extortion. To this general profligacy of the great, Cicero was a distinguished exception. His private character is without a stain; he was always the steady friend of virtue and the patron of merit; and his public life is uniformly marked by a noble and disinterested integrity. The principles from which this conduct flowed, are easily discernible in his writings. His views of justice and social duty are remarkably clear for a pagan moralist. Nor should we forget to mention the maiden purity of his feelings as displayed in his works, which (with a few light exceptions) are every where delicately chaste; and this distinction will be regarded as no mean praise, when we consider the wide license taken by even the best writers of the day, and how difficult it is to withstand the seductions of fashion in matters of taste.

Besides the dignity of his moral sentiments, the works of Cicero are powerfully recommended by the beauty of his phraseology. "To discuss important questions," he says, "in a copious and ornamented style, I have always thought to be the perfection of philosophy;"* and it would appear that he held his merit as a philosopher in light esteem compared with his powers as an orator. In the exordium of his work *De officiis*, Marcus is directed to study his father's speeches, as the best specimens of Latin oratory extant in the language; and even his philosophical works are commended to notice for the sedate and temperate elegance of the style, which he considers not less worthy of attention than the fire and force of his orations. The preference he gives himself in point of elegant diction, he hopes will not be imputed to his vanity; since, leaving to others the praise of philosophical depth, he only claims the credit of a clear, chaste and beautiful style (apte, distincte, ornate dicere), fairly purchased, he thinks, by the labor of his life, that being the point to which the freshest and the maturest powers of his mind had been directed. No wonder, then, that the diligent efforts of such a man made his writings a model of classical elegance, to admire which, Quintilian told his pupils, was the surest sign of improving taste.

But if Cicero be without a rival in dignity of thought and beauty of language, these characteristics make his translator's task a more difficult one. The brevity, strength and stately march of the original can never be

* *Tusc. quest. lib. IV. ch. 4.*

† *Id. lib. I. ch. 30.*

‡ *Id. lib. I. ch. 17.*

§ *Id. lib. I. ch. 12.*

* *Tusc. quest. lib. I. ch. 4.*

preserved in a modern version; and the English probably differs in structure from the Latin more widely than from any other language whatsoever. Two striking features of this difference are the small number of particles in the Latin, and that peculiar adaptation of words to each other by which they are assigned their proper relations in a sentence, although to an English reader they seem arbitrarily placed in unmeaning confusion. To the first of these characteristics the brevity of the language is mainly owing, and on its brevity its energy of expression in a great measure depends. To the other, its variety and harmony of cadence are due, and to some extent its force, since, such liberty being allowed in the collocation of words, those of most weight in a sentence can be placed where the fullest emphasis may be given them. But from both these qualities, it must be confessed, and especially from the former, arise in some degree the ambiguity and want of precision by which the Latin language, in the opinion of Dugald Stewart, is made an imperfect organ of philosophy.

The wide extent of difference between our language and the Latin will be made more strikingly apparent by the following facts. With a little practice, a reader may look on the pages of a French or Italian book, and read aloud almost uninterruptedly in tolerable English; but if the attempt be made to translate Latin in the same extemporaneous way, however familiar with the language the reader may be, he will find it impossible to make the sense of his author understood, without first reading each sentence to himself, and then clothing its meaning in his own words, with very little regard to the order of arrangement observed in the original.

Owing to this difference in the structure of the two languages, the best English translation of a Latin work must necessarily be a sort of paraphrase, in which the meaning is accurately taken from the original, while the translator is guided by his own judgment in the choice and arrangement of words. The spirit of his author, the general cast of his style, may be followed so far as the language will admit; but if a literal version be attempted, a barbarous and unintelligible jargon will be the result, devoid of every trait which composed the excellence of the original. He who should adopt the tactics and arms of the ancient Romans as described by Vegetius, without regard to the changes in the art of war produced by the lapse of ages and the use of fire-arms, would not act more absurdly than such a translator.

To give a suitable version of Cicero, then, the translator must first have made himself master of the English tongue; for though the author's chaste and beautiful diction may be represented by similar elegance in our own language, yet these traits of the original must be imitated in English, since they cannot be transfused from the Latin.

There are some circumstances, too, which may make a translation of Cicero a task of peculiar difficulty. Before his time, no Latin prose writer had displayed even a moderate polish of style; and for him was reserved in a great measure the important work of giving stability and elegance to the language. In his time, therefore, it had not acquired all the variety and precision of expression which it afterwards possessed; and if the reader will refer to the more metaphysical parts of Seneca and Quintilian, we think he will generally

meet with less ambiguity of phraseology than is to be found in similar passages of Cicero. Besides, no author before him had ventured to treat of philosophical subjects in Latin. The Greek philosophy, it is true, was not unknown to educated men in Cicero's time; but it was generally held in little esteem. The speculations of the Greeks were mostly on the origin of the universe, the essence of the Deity, fate and providence, the nature and destiny of the soul, and the ultimate good and evil of life. This subtle philosophy, born and fostered in a land of sophists, was despised by the manlier though ruder genius of the Romans, as well for the frivolity and weakness of the Greek character, as because such mystic inquiries were too remote from the concerns of social life to end in practical benefit. The ingenuity of Carneades in arguing with equal force both for and against the advantages of virtue, and the reception his arguments met with from Cato the censor, are too well known to be detailed here. Nor was the distrust with which that stern moralist looked upon the Greek philosophy extinct among his countrymen in Cicero's day. His fine apostrophe to "the parent of life, the patron of virtue and the destroyer of vice," as he calls philosophy, which is contained in the fifth book of his *Tusculan questions*, concludes with lamenting that men in their darkness of mind should regard her, not only with indifference, but even with contempt and hatred;—referring, no doubt, to the little encouragement which his own labors in her behalf had received. And in the opening remarks of his work *De finibus*, in which he discusses the supreme good and evil, that fruitful theme of argument and sophistry among the Greeks, we find him complaining that many learned and distinguished men had opposed the introduction of such subjects into Latin literature. They alleged, he said, that their language was incapable of conveying intelligibly ideas of a metaphysical character; and that therefore such topics should be left to their Grecian neighbors, to whose temper and language they were so much better adapted. This charge he repels with a becoming spirit; but his zeal may be thought to have betrayed his judgment when he ventures to say, as he does shortly after, that the Latin language was even more expressive and copious than the Greek; nor would it be difficult, if it were necessary, to meet and contradict this assertion by other passages cited from his works.

As therefore the Latin language had not been employed in the discussion of subjects requiring much delicate precision of terms, it was found impossible to adapt it at once to disquisitions of such refinement with sufficient exactness; especially as its structure was nearly completed, and susceptible of little farther modification, before Cicero commenced his philosophical works. From this cause, we find him at times embarrassed for the want of a word corresponding with some important Greek term; as when, in the fragment *De universo*, he renders *analogia* by the words *similitude or proportion*; and in the third book of the *Tusculans*, proposes as equivalent to *sophrosyne* (to which perhaps the term *sobriety* comes as near as any we have) the words *temperance, moderation, modesty and frugality*, and hesitates at last on the adoption of any one as sufficient.

To remedy this vagueness in the use of words, which even Cicero found it impossible to avoid, the translator must be well versed in the Greek philosophy, from

which his author confesses he derived the substance of all his dissertations. As a farther remedy, he must be fully able to comprehend the general tendency and object of his author's argument, since his meaning can often be gathered with sufficient certainty only from the coherent reasoning of the whole. His frequent and sometimes indistinct allusions to subjects of history and fable, for the sake of ornament or illustration, will also make a considerable acquaintance with ancient history and mythology of indispensable use. In short, a translator must possess a mind in comprehension, force, taste, and variety of learning, somewhat like that of Cicero himself, in order to do adequate justice to the prince of Roman philosophy.*

Could such a man be found, one who was willing to bestow the requisite time and labor on this work, so as to present us with a version faithful in substance and not unworthy of the original in elegance of language, he would deserve the gratitude of every admirer of Cicero, and of all to whom our national literature is a subject of interest; and even if he failed in his effort, after bestowing due diligence to ensure success, it might at least be said of him, as of Phaeton in old time, that—"magnis tamen excidit ausis,"—he fell in a noble enterprise. But this praise is not meant to extend to any sciolist, "if such a man there be," who, without the learning or the capacity to comprehend his author, without the taste to appreciate his beauties, and without any competent share of the qualifications above considered to be necessary, should challenge the public attention to a work which, made under such circumstances, can be little better than a *libel* on the great Cicero. To what extent the author of the present version possesses the requisites of his task, we will now endeavor to show.

As a specimen of the style in which he has chosen to translate this great work, we present the reader with the first sentence, which is transcribed verbatim.

"When at length relieved, my dear Brutus, either altogether or in a great measure, from the labor of the forum, and senatorial duties, I betook myself, chiefly at your exhortation, to those studies, which, held in mind, dropped at times, after a long interval of suspension, I have recalled; and, since the method and discipline of all arts, which relate to the right way of living, are contained in the study of wisdom, called philosophy, I have thought it my part to illustrate this in our own language; not because philosophy might not be known by means both of Greek authors and teachers; but it has always been my judgment, that our countrymen have either invented of themselves more wisely than the Greeks, or have made everything better which they received from them; at least, whatever they thought worth the labor."

We now proceed to show with what measure of fidelity to the text his work has been conducted. The first specimen which we shall give, is taken from the second page of the translation, (page 6 of the book,) where the following words occur:

"For, as with the Greeks, the most ancient of the learned was the race of poets; at least, if Homer and Hesiod existed prior to the foundation of Rome, and Archilochus during the reign of Romulus. The reception of poetry among us was rather backward," &c. By reference to the original, the reader will see that the word *siquidem*, which is rendered *at least if*, should be *since*,—a term corresponding to the Latin, and in this place necessary to the

consistent meaning of the sentence. Moreover, the words, "the reception of," &c., forming the commencement of a separate clause, are properly the last words of the preceding one, which as it now stands is evidently imperfect. The whole should have been thus connected: "For although with the Greeks," &c.—"yet, among us, the reception," &c.

On the next page, it is stated that Cato had reproached Nobilior with carrying poets into one of the provinces; after which follow these words of the original: "Duxerat autem consul ille in Ætoliam, ut scimus, Ennium;" and are thus rendered: "That consul took with him, however, into Ætolia, as we know, Ennius." Waiving all objections to the phraseology, which might offend a censorious critic, we remark on the translation, that the word *autem*, in this connection, means *for*, and not *however*; and as it now is, the reader would refer the words "that consul" to Cato, instead of Nobilior. The sense of the original is this: "For we know that when consul, he had carried Ennius into Ætolia."

Page 8. After stating that mathematics had been little studied by the Romans, the translation proceeds: "But, on the contrary, we rapidly embraced the orator: nor him, at first, with erudition, though ready of speech; but afterwards with learning. For Galba, Africanus, Lælius, are transmitted by tradition as learned. But studious, in the age before theirs, as Cato; after them, however, Lepidus, Carbo, the Græchi; and then so great, down to our age, as to balance very nearly, if not quite, the ascendancy of the Greeks." We bespeak the reader's special attention to this passage, and request him to compare it with the Latin text. It would be a vain attempt, and superfluous if attained, to render the mistranslation more apparent, since the greater part cannot be understood without reference to the original.

Page 9. "Si aliquid oratoriae laudi nostra attulimus industria." "If, by our industry, we have acquired some oratorical reputation." This is a strained construction, at best; and in the present case is inadmissible, because Cicero is speaking in his own person, though he uses the plural *we*; and the context shows that the words "oratoriae laudi" refer to his country's fame and not to his own. In the next sentence, "cum motus esset Isocratis rhetoris gloria" is falsely rendered, "as he was rather stung at the glory," &c.; the word *motus* meaning here simply *moved* or *induced*.

Pages 14 and 15. "Auditor. 'You rally as if you thought I said the unborn are unhappy, instead of those who are dead.' Marcus. 'Then you insist they are.' Auditor. 'Nay, but because they are not when they have been; in that, I think them unhappy.'" Here, the reply of Marcus seems to refer to the *unborn*, and not, as it should, to the *dead*; and the translator's misconception of these words, has led him into an error in the next; for *immo* means *yes*, and not "nay, but." Besides, the words of Marcus, "they are," meaning "they are *unhappy*," signify in the next sentence *they exist*, and the ambiguity creates some confusion; to avoid which it would have been well to translate the passage a little more at length, as thus: "Then you insist that the dead are unhappy?—Yes, I think them unhappy, because they have ceased to exist after having once lived."

Page 15. "Omne pronuntiatum, (sic enim mihi in presentia occurrit ut appellarem *axioma*; utar post alio si invenero melius,) id ergo est pronuntiatum quod est verum aut falsum." "Every pronunciation, for so I will now call *axioma*—I will find a better word, if I can, some other time, is pronounced only because it is true or false." We have several faults to find with this passage. In the first place, *pronuntiatum* means, not *pronunciation*, but *predicate* or *proposition*: secondly, he has confounded the parenthesis with the open text, so as to make the whole almost inexplicable: and, thirdly, the latter part of the sentence is misunderstood; for, being interrupted by the parenthesis, it is begun anew, and should not form a consecutive part of the whole. The

* "Romanæ philosophiæ princeps,"—a title given him by Lactantius, *loc. cit.*

meaning we conceive to be this: "Every proposition—(so for the present let me render *axioma*—I will substitute a better word when I find one)—a *proposition*, then, is an assertion which is either true or false."

Page 16. "Qui vivimus, cum moriendum sit, nonne miseri sumus?" "As to us who are alive, are we not miserable?" In this clause the translator has omitted the important words, *cum moriendum sit*,—"since we are doomed to die." It is possible, however, they may have been wanting in the copy he used, though retained in both of two editions now before us. On the same page, allusion is made to an opinion of Epicharmus, "*acuti nec insulsi hominis, ut Siculi*; which words are rendered, "an acute, and for a Sicilian, not a frivolous man." The meaning we believe to be mistaken; for we think it is, that he was "a shrewd, intelligent man, as the Sicilians generally were." But the reader will judge for himself, as the original admits of both interpretations.

The foregoing extracts are all made from the early pages of the first book—a book of which it is very desirable to have a suitable version, because it contains not only Cicero's own speculations on the most important of all subjects to man—the immortality and future destiny of the soul—but the opinions, as he says, of nearly all the ancient philosophers on the same subject. With what fidelity this part of the work has been executed, the reader will judge from the specimens before him. We now proceed to comment on a few passages taken from the last book.

Pages 285–6. Cicero is speaking of the tomb of Archimedes, which had been unknown to the Syracusans, and was discovered by him in the midst of weeds and brambles; and he thus continues the narrative: "Tenebam enim quosdam senariolos, quos in ejus monumento esse inscriptos acceperam; qui declarabant, in summo sepulchro sphaeram esse positam cum cylindro." These words the translator renders: "For I remembered certain trimeter verses, which mentioned that a sphere with a cylinder were placed on the summit of his sepulchre,"—omitting the words *quas in ejus*, &c., "which I had understood were inscribed on his tomb." A little after, the author states, that the weeds and briars were cut away; and the translator proceeds: "When the ground was cleansed, we walked up to the base: the epitaph appeared—the letters at the lower part almost half effaced by corrosion." Two instances of misinterpretation occur in this sentence. In the first place, "*cum patefactus esset aditus*," means "when a way was opened," and not "when the ground was cleansed;" in the second, "*apparebat epigramma, exaeis posterioribus partibus versiculorum, dimidiatum fere*," implies, not that the letters at the lower part were almost half effaced, but that almost *half the epitaph* was effaced, the latter part of each line being obliterated.

Page 287. "Hinc omnia quae pulchra, honesta, praeclara sunt (ut supra dixi; sed dicendum idem illud paullo uberius videtur) plena gaudiorum sunt." "Hence, all things which are beautiful, honest, noble, as I have said before,—but it appears to be said a little more copiously,—are full of joys." *Honestum* were better rendered *honorable*, than *honest*; and the words, "but it appears," &c. hardly give the meaning of the text, which is, that "it seems to deserve a more copious explanation."

Page 289. He speaks of investigating, among other things, "quibus cavernis maria sustineantur: qua omnia delata gravitate medium mundi locum semper expetant, qui est idem infimus in rotundo"—"by what caverns the seas were sustained; into which all things are directed by gravitation; seeking always the central point of the universe, which is the lowest in a sphere." Here, the translator makes Cicero say, that all things are directed into the seas by gravitation, and the latter words seem to have no relevant meaning. But the au-

thor's intention was to propose, as a separate subject of inquiry, by what force of gravity all things tended to the centre, &c. This passage we think an interesting one, because it shows that Cicero had some idea, though a vague one, of the law of gravitation, the principles of which it was reserved for Newton to unfold and demonstrate. On the same page, the words "*omnes partes circumspiciens*" are translated "*circling his glance to all parts*."

Examples of this kind, showing the translator's incapacity for his task, might be multiplied to almost any number; and the extracts given are a very small portion of what we had marked: but we grow weary of the work, and doubt not the reader sympathizes with us. We beg leave, however, to present him with a few other sentences of the translation, which we copy without giving the original, that our page may not be too much encumbered with Latin quotations. Page 19. "But thus far as stated, the heart, the blood, the brain, air, fire, are opinions of common prevalence; the rest are almost singular, as were many still more ancient; the more recent, however, Aristoxenus, a musician, as well as philosopher; a certain attuning the body, as in singing and the lute, which is called harmony." Page 20. "But Diemarchus, in that discourse which he represents as held at Corinth, in three books, where the interlocutors are learned men, many of whom are speakers in the first book, in the two, he introduces a certain Pherecrates, an old man of Phthiotis, sprung, as he says, from Deucalion, asserting that the soul is nothing at all, and that this name is empty altogether," &c. Page 31. "And thus, although, I presume others also, in so many ages, but as transmitted in extant letters, Pherecydes, the Syrian, first said that the souls of men are immortal, he claims antiquity certainly; for he existed in the reign of my namesake Tullius." We make no comment on these passages, but merely recommend the ingenious reader to discover the meaning without the aid of the Latin text.

It is but fair to state that the first book, from which most of our quotations have been made, is the worst of the five, and that the translation improves considerably as it proceeds. The improvement, however, is not sufficient to exempt any part of it from the general censure to be passed on the whole, since the flagrant defects of the first are visible in all the other books, though not to the same extent. We are disposed to suspect that Mr. Otis began his version with very "small Latin;" but becoming more familiar with the language in the progress of his work, he was enabled to give the meaning with greater accuracy. Something too may be ascribed to the fact, that the first book is the most difficult of all.

The Tusculan questions abound in poetical extracts. These the translator has sometimes rendered into prose, and in no way distinguished from the text, as on pages 102 and 150. The liberty thus taken with his author is certainly too great to be allowed, since it ascribes to Cicero the merit or the responsibility of the passages so confounded with the text.

As specimens of the translator's versification, we give a few extracts.

"Nay, howsoever to Priam I restored

The body; Hector, at least, I've taken off."—p. 78.

"Men widely err in life, through mental night;

Euthynous enjoys, the special prize of fate,

An early grave; for such was best for him and thee."—p. 83.

"To plain our adverse fortune, not lament,
Becomes the man; weeping to woman's genius
Falls."—p. 121.

It may not be amiss to tell the reader in passing, that "to plain" means *to complain of* (conquer.) We feared he might be puzzled to understand the passage without this explanation.

"The sick mind, as Ennius says,—
Ever wanders, impatient to endure,
Or suffer: to covet never ceasing."—p. 134.

"The man who deems him not the God supreme,
Let pass for fool; at least, to all things new.
Alone it rests with him, whom he will madden,
Whom make wise, insane, or victim of disease,
Or whom in turn beloved, caressed and courted."—p. 237.

All his poetry is not equally bad, but a great part of it is; and we think the extracts already given, will convince the reader that Mr. Otis's talent is as little to translate verse as prose.

It may be thought harsh to expose his versification to the reader's view, since the Tusculan questions are a prose work, and its translator does not assume to be a poet; but we think he should have sought the aid of some one better able to perform this part of his office, if he doubted his own capacity; or if he could obtain no competent assistance, that circumstance ought to have led him to relinquish the undertaking.

A defect in the design of the whole work is the want of all annotation. We are not advocates for a cumbersome commentary; but to mere English readers, for whom the translation is chiefly intended, a few well-judged explanatory notes are essentially necessary for the perfect understanding of the text. There are many passages of such a character that, without notes, they cannot be translated intelligibly to one ignorant of the Latin, unless by a copious paraphrase which departs from the original, and which, in point of fact, incorporates the note with the text. We refer, for example, to the author's definitions of Greek and Latin words; and we might direct the reader to many such passages if we thought it necessary. There are others, too, to which short notes appended would explain obscure allusions, and save the reader much unnecessary trouble and research.

Modest, unassuming ignorance never merits contempt or censure; and we should have been less pointed in our condemnation of Mr. Otis's work, if he had offered it to the world with the air of a man who seemed to doubt his full ability for the discharge of his office. But he challenges the patronage of the reading public, with the confidence of one who is only claiming his unquestionable right. We copy a few sentences from his preface. "When, at length, weary of the toys of literature, and sickened with its trash, will the sons and daughters of this high-minded republic be likely 'to close their ears to the most eloquent voice of wisdom?' Will they neglect to read a volume recommended by all the attraction of novelty; and which no one can read without being made wiser and better?" And half a page farther on he continues: "Will they not place this work" (the translation, to wit) "in the hands of all who can read, from the village school, to the highest university? Will there be one among them to oppose the introduction of this hidden treasure into the currency of our literature, when the only recompense desired for the arduous attempt is, that they will read,

mark, learn, and inwardly digest the Tusculan questions?" "Place this work in the hands of all who can read?"—never, we devoutly hope; for, great as our admiration of Cicero is, and much as we wish to see him more known and read by our countrymen generally, we prefer them to remain in hopeless ignorance of "Rome's least mortal mind," rather than make his acquaintance through this defective version, which is but a caricature of the original.

Prefixed to the work are two letters from Mr. Adams, ex-president of the United States. One acknowledges the receipt of the "first Tusculan," but gives no opinion of its merits, he not having read it then. The other was written with reference to a "revised translation of the first four chapters of Cicero's offices," which, to Mr. A.'s "taste," was "better than Guthrie's." We have never seen Mr. Otis's translation of the offices, and know not if it has ever been published or even completed, and therefore charity should induce us to hope it was better than the "Tusculans;" but as it proceeded from the same pen, and was a younger essay by five years than the present, we fear it will not be found in any degree superior. We are not of those who "lightly speak evil of dignities;" but we would respectfully ask how we are to keep unimpaired our reverence for Mr. A.'s candor and judgment, if he has been seduced by flattery, or misled by false "taste," to praise and encourage such a translation as this?

We would state, in conclusion, that we have no personal acquaintance with Mr. Otis; and that, before the present version, we knew him as an author only through his translation of *Botta's American War*. Not much, we think, can be said for the *style* of that translation; but we were, nevertheless, well disposed towards him, as having added one to the really valuable books our country has produced. Should we seem, however, in the foregoing review, to have looked with an evil eye on his present work, in our own defence we beg leave to refer the reader to the translation itself. If that be examined and compared with the original, we confidently think he will not charge us with the want of either courtesy or candor. Moreover, we have to apologize for the air of sententious dogmatism our criticisms may be thought to wear. This we could not avoid, without incurring a tedious prolixity. Nor had we any wish to leave the impression that we could have made a better translation than Mr. Otis has done. We are conscious of our own weakness, and know that it takes but a small share of wit or wisdom to see and laugh at the faults of others who may be superior to us; and that the trade of a cavilling critic is the proper calling of a feeble and petulant mind.

Narrative of a Journey to Guatemala, in Central America, in 1838, by G. W. Montgomery. New York. 1839. 8vo. pp. 193.

The exclusive jealousy which guarded the colonies of Europe, in America, was by no monarchy so strongly felt, and suspiciously enforced, as by Spain. The colonial policy of Great Britain, excluded all intrusion of foreigners, by navigation acts; and North America long bore the subjection and unmanly dependence, of the system of modern colonies. Principles of civil

liberty, well understood and often acted upon at home, were but transplanted to the British colonies, which early liberated themselves from the odious vassalage of Metropolitan government.

It was not until the period of our second war of independence, that the *ci-devant* Spanish colonies in America, began to revolt, against the oppression of the mother country. The first *gritos*, or cries for independence, were heard in South America, but thirty years ago; and without referring to the progress of events in that quarter, it may be sufficient to say, that Guatemala, or Central America, only achieved its independence, in the year eighteen hundred and twenty-three.

The government of the United States has always acted upon a settled policy, of acknowledging governments, existing *de facto*. A minister was accordingly sent to Guatemala, at an early day, and diplomatic relations have been constantly maintained with that Republic. The exigencies of these diplomatic relations, induced the government of the United States to send Mr. Montgomery, last year, to that Republic, and the result of his journey has been equally instructive and entertaining to the American people, in the volume of travels now before us.

No better selection could have been made by Mr. Forsyth, for the purposes of his mission, than of Mr. Montgomery. The son of an American Consul at Valencia in Spain, born and educated in that country, familiar with Spanish literature, laws and manners, he was the suitable person for a tour in Guatemala. He has already achieved a reputation in the literary world, by the romance of *Bernardo del Carpio*, which he terms a "*Novela, historica, caballeresca, original*." One of its knightly heroes, is Don Alfonso II., King of Leon and Asturias, who flourished in the latter part of the eighth century. Mr. Montgomery was lately United States Consul at Puerto Rico.

Embarking at New York, our author proceeded to Havana, and thence sailed for the port of Truxillo in Guatemala. The commandant of this place is graphically described, at page 24.

"The Commandant was about thirty-seven years of age, rather tall and muscular, though of slender form. He had an expressive countenance, with features strongly marked, dark eyes, black hair, and thick eye-brows. He was somewhat sun-burnt, and had a scar near the corner of his mouth; but, altogether, he was a fine, soldierly looking man. His dress was a blue frock coat, with military buttons, gold epaulettes a little tarnished, a sword and cocked hat, with a plume and white feathers, the national colors of Central America."

"The house of the Commandant was a good sized building, of solid masonry. It consisted of one large room, formed by the four walls, without any division into apartments; and above, instead of ceiling, were the rafters of the roof. On one side was the street door, with two windows grated with iron bars; on the other side another, but smaller door, opening into the esplanade of the fort, where a swarthy sentinel was pacing to and fro, with a straw hat, no jacket, and a rusty firelock on his shoulder. The floor was paved with flat tiles, and covered here and there with little straw mats, of a kind peculiar to the country. This room constituted the whole of the establishment, except the kitchen. It served for a parlor, bed chamber, dining room and office. And well it might; for there was the sofa for the reception of visitors, a substantial cedar table for dining, a bed to sleep in, and a desk with writing apparatus. The bedstead, a very

neat one, of wrought iron, provided with a handsome mosquito net, was placed on a platform, which raised it about two feet from the floor. A military saddle in one corner of the room, a cavalry sabre in another, and a pair of pistols hanging from the wall, gave a military and picturesque character to this primitive *ménage*."

This description of houses and their furniture, is characteristic generally of the coast of Spanish America, as we ourselves know, from observation. The following account of a conversation with the Commandant, relative to the United States, represents with much truth and humor, the general ignorance of the people of South America, in regard to foreign countries.

"During dinner, the conversation turned on topics chiefly relating to the United States. I replied to many of the commandant's questions; but when I stated to him, distinctly, the population, commerce and resources of our republic, the progress of the arts and the facilities of communication by land and water, he would smile, shake his head, and cast a meaning look at the ministers, as much as to say, that he was not to be imposed upon. This, though I was relating nothing but the truth, embarrassed me, and made me feel as if I had been detected in using the privilege of a traveller. I thought to extricate myself from this awkward position, by reducing my subsequent statements to the standard of his belief. Accordingly, I relieved the Pennsylvania of no inconsiderable weight, by reducing her one hundred and forty-eight guns, to one hundred. The rate of travelling in rail road cars, I stated to be from fifteen to twenty miles, instead of from twenty to thirty. I even curtailed the amount of the national revenue, and actually purloined the United States of ten or a dozen millions."

From Truxillo, Mr. Montgomery proceeded by water, to the English settlement of Baliza, and thence in an English steamer to the town of Izabal, on a river of that name. This town was the nearest port to the city of Guatemala, the destination of our author. It is distant ten days journey. The notice of the English settlement at Baliza, is peculiarly interesting at this moment, as the British government has just taken possession of the island of *Ruatan*, opposite to the Baliza, which involves some questions of continental policy, upon which the government of the United States has heretofore expressed itself, very intelligibly, to the nations of Europe.

The picturesque scenery of the Izabal, is described with singular felicity:

"About midnight the moon rose, and the effect of her pale silvery light on the trees and the water was beautiful beyond description. I could now see objects more distinctly, and felt satisfied, that if there is any thing picturesque, beautiful and sublime in nature, it must be the entrance to this river. The banks rise to a height of from two to three hundred feet, and are clothed with a rich and impenetrable foliage, the branches of the trees spreading several yards over the river. In some places this foliage entirely disappears, and a vast naked rock, smooth and flat, and perfectly perpendicular, rises like a stupendous wall, at the foot of which the depth of water admits of a vessel brushing the very face of the precipice, without danger. Here and there may be seen a rill of water as clear as crystal, coursing from top to bottom of this natural wall, or gushing out from its side. At other places, a group of rocks assumes the appearance of an old castle or ruinous fortification."

With this sketch of scenery in Central America, we will, in this place, connect a description of some remarkable birds which inhabit the noble forests of this country. Mr. Audubon has still much to do in the

natural history of America, to judge from our author's ornithology.

"The birds of Central America, are deservedly celebrated for their great variety and the extraordinary beauty of their plumage. Among the most conspicuous, is the *Quesal* or *Trogon resplendens*, which is to be found only in the wild and remote regions of Central America, and the South of Mexico. Those frequenting the forests of Quesaltenango, from which they derive their name, are much the finest. This bird is of the shape and size of a pigeon. Its plumage is of a metallic golden green, except that of the wings, which is spotted with a brilliant red and black. The head is adorned with a soft silky crest of short barred feathers, of a beautiful green. But the distinguishing feature of this bird, and that which constitutes its peculiarity and beauty, is the plumage of its tail, which consists of three or four loose wavy feathers of a rich green, powdered with gold. These feathers are barred and about three feet long. They were formerly worn by the aborigines of America, as ornaments for the head. In brilliancy of plumage, and in symmetry of form, this bird—even setting aside the grace and beauty of its pendent plumage,—is unrivalled among the feathered tribe. When deprived of the ornament of its tail, the *quesal* seems sensible of the injury. It sickens and dies. Such is the importance it attaches to this part of its gorgeous dress, that the nest it makes, is provided with two apertures, one for egress, the other for regress, in order to avoid the necessity for turning, by which the feathers of its tail might be broken or disordered. For the same reason, it seldom makes a short or sudden turn. The Indians hold it sacred, and used to say that, the Creator, when he formed the world, assumed the form of a *quesal*."

"The *Corcha*, a species of *Oreole*, is remarkable for the curious construction of its nest, which is of the kind called pensile, from the circumstance of its being suspended in the air by a mere thread, from the extremity of a long branch. In the construction of this nest, an architectural construction is displayed, the most ingenious, artificial and complicate, that it is possible to imagine. It is a bird of small size, and its plumage is black and yellow. It is to be found also in the United States."

We have never, in all the countries which we have visited, ever seen but one preserved specimen of the *quesal*, this wonderful beauty of natural history. That specimen belongs to the Hon. John Forsyth, Secretary of State. The bird and its tail of "*rich green, powdered with gold*," are singularly well preserved. Our author has carried his powers of close observation, and happy description, into other departments of natural history, and we have been equally instructed and amused, with his notices of beasts, birds, fishes, trees and plants. Of the topography of Guatemala, he remarks:

"The face of the country is generally mountainous. It presents a succession of sierras or mountains, with intervening valleys, except in the neighborhood of Guatemala, when the table-lands commence, leagues around. All the physical and natural peculiarities of other countries, are united in the formation of the general aspect of Central America; delightful valleys, teeming with animal and vegetable life, extensive prairies clothed with verdure, gentle rivulets and foaming torrents, huge broken rocks, inaccessible mountains, and fiery volcanoes, dense gloomy forests, grassy knolls and shady groves."

We will conclude our extracts from Mr. Montgomery's book, by the following notice of the *boiling lakes*, near the village of *Aquachapa*.

"Of these lakes or ponds, there are several, and they occupy a considerable tract of land. The largest is about a hundred yards in circumference. In this as in all the others, the water, which was extremely turbid,

and of a light brown color, was boiling furiously, and rising in bubbles three or four feet high. The steam ascended in a column of white dense cloud, and spread for a considerable distance round, as I stood for some time on the bank of this natural cauldron, gazing with awe, upon its tremendous water. The heat was so great on the surface of the ground, near the borders of the lakes, that had our feet not been protected by thick shoes, it could not have been endured. On thrusting a knife into the pond, the blade when drawn out, after a few seconds, was so hot, as to burn the fingers. Our horses, which, according to the customs of the country, were not shod, exhibited much symptoms of uneasiness. In some places, a little column of smoke, issued fiercely from a hole in the ground, while in others, the water, in a boiling state, gushed out like a fountain. The ebullitions of these lakes or springs, have formed, on the borders of them, a deposit of the finest clay, and of every variety of colors."

The preceding extracts from the journey to Guatemala, are perhaps not those which might present the full merits of the book. It abounds in rich historical and statistic information; but it is chiefly a pleasing narrative of personal adventures, *by flood and field*. As an amusing book of travels, in a country little known, we recommend it to our readers, and equally so, as a book of instruction. Guatemala must henceforth attract much interest, from the narrative which the public may expect from our successful tourist Mr. Stephens, who is already embarked for Central America. Del Rio, Haafkens, Thompson and lastly Waldeck, are the authors who have already written upon Central America. The antiquities of Palenque, Copan, Peten, &c., are sufficient of themselves, to attract the attention of the scientific world, to ethnographic questions so closely connected with the early history of America, and with the early condition of the human race.

We have observed the progress of events in Guatemala, with sincere regret. The latest information from that quarter, is that each state of the confederation, had declared itself independent, and they were so acting in their sovereign capacity. Is the tendency of confederations *centrifugal*, or towards consolidation? In the United States, we have felt both moral forces. Generals Carera and Morazan, whom Mr. Montgomery notices, have brought about this fragmentary condition of the republic. The people follow their leaders, and government is dissolved. *Delirant reges, plectuntur Achivi*.

Mr. Everett's Address on German Literature.

The descendants of that noble race, who, centuries ago, marched, "a brave blue-eyed troop," against the Imperial City, and overturned its classic altars and shattered with their war-axes its royal monuments, have opened the books of the Sybil, and snatched the Lyre, and have given utterance to thoughts and awakened strains, that thrill upon the hearts of men like the sound of timbrels over the waters. The attention of our scholars is daily drawn towards it, and, teeming as it does with the wizard creations of genius, each eye that turns thither is fascinated as by a spell. The country of Goethe and Schiller and Richter and Kant and Fichte, has become the enchanted land of Literature.

We will not presume to question the excellence of its wisdom—the value of the treasures which lie sparkling in this newly-opened mine. We will say nothing of the effects of its strange and dreamy style upon our writers—of its philosophy upon religious faith. We merely ask of the initiated, if, when they have been communing with its master-minds, and thirstily quaffing from its curious lore—we ask them, if then it does not seem pleasant to turn back to the good old English writers, the pure, the eloquent, the thoughtful and the free? Is it not like emerg-

ing from the wild Hartz mountains into the open landscape—into green lanes and pleasant sunshine? Is it not like leaving the vineyards and castles of the distant and gorgeous Rhine and coming home? And have we learned all that can be learned from these our fathers indeed? Or have we not been neglectful in studying the writers of our native tongue—in drinking from “the well of English undefiled?”

These questions will do, perhaps, as well as anything else which we could say by way of introduction to a brief notice. To speak of the literary merit of the Address before us, might be deemed superfluous, knowing the source from which it emanates. It was delivered before the societies of Dartmouth College in July last, and it embodies a condensed sketch of German Literature. Mr. Everett alludes to Wieland, speaks briefly of Lessing, Herder and Klopstock, and dwells more at length upon those twin-stars in the literary firmament of Germany, Schiller and Goethe. He speaks, also, in an eloquent strain of Körner, and this notice of the Poet of “the Lyre and Sword,” we should have transferred to the columns of the Messenger, together with a comparison between Byron and Schiller, but want of room, not inclination forbids. The closing address to the students of Dartmouth, should not be confined to the walls of that Institution.

In short, the Address will be valuable particularly to those whose interest in German Literature is beginning to be awakened, but who are not, as yet, intimate with its mysteries.

The New York Review: No. X: October, 1839.

If we have been remiss heretofore in noticing this work, of one thing we are certain—our neglect has not flowed from a low estimation of its merits. It ranks in the highest class of our periodicals, and it needs not our aid in attracting towards it the attention and favor of the public. It is very generally known that its Editor is a Professor in the University of New York, and a prominent clergyman of the Episcopal denomination. Hence, so far as “the Review” is theological, it advocates the views of that church. But he who expects therefore to find it merely a polemical and sectarian work, will be much disappointed.

It is moreover, a medium for the discussion of philosophy and general literature, and its articles in these departments, we presume to say, are worthy of the high character which it maintains. We have not read the present number, unless a cursory glance, here and there, can be called reading. We have therefore made it the subject of a general notice. We trust that it is not necessary that we should say to the public, that upon it depend the excellence and reputation of our periodical literature. A Magazine or Review conducted with the most transcendent ability, cannot be supported without money. Now we state this truism in the simplest manner possible, in order that it may attract notice and excite reflection. It may be, it is so simple and primitive, that it is entirely overlooked, and men forget it. We say, then, that money is essentially requisite to the support of a periodical. This money, it is more than probable, must come from the pockets of the public; as no man, however much he may like to write, likes to write for nothing—and, if he does, the printers and paper-makers reject this liberal plan entirely, and he is a rare one indeed, who will write for nothing “and find himself”—we may say who can do this. So, unless our periodicals are supported by the public they must fail, and therefore, we say, the excellence and reputation of this branch of our national literature depend upon our citizens.

We hope, then, that such works as the New York Review, will not be neglected for the host of the light and trashy kind with which our country is deluged, but that it will meet with the encouragement it so justly merits.

The American Almanac, for 1840: Boston: J. H. Williams.

“The times change and we are changed with them.” So are the Almanacs. Humble as they may seem to us, thrust aside upon our table or hung up in our counting-room, still, like more important matters, they represent the spirit of this refined and wonder-working age. They no more come to us, meagre and ill-printed pamphlets;—they are swathed to a respectable bulk, neatly clothed, and comely in their black and white. They no more greet us annually with a long series of

predictions, running down their pages, of sun, cloud, rain, drought, wind and snow;—this branch of the business is monopolized by Professor Espy. But if we miss these time-honored prophecies, we find in their stead many an additional page of interesting and instructive matter. We do not say that all are so. We question very much the instructiveness, or the wit, of those Almanacs which appear with *burlesqued* caricatures—in other words, with engravings which out-Herod Herod, accompanied by forced attempts at humor—ycleped ‘Comic Almanacs.’ But there certainly is much instructive matter contained in some of these annuals; and they are very appropriate vehicles for this purpose. Among these, perhaps none ranks more justly as the best, than the one before us. Indeed, we should think its second title—“Repository of Useful Knowledge,” more correct, as its distinctive one, than the first. The present is the eleventh volume—the first of the second series. The first part is composed of the Calendar and Celestial Phenomena for the year 1840. The second, of the Miscellaneous Department, information respecting the United States, and each State specially, Meteorological information, &c. &c. It contains, among a variety of matter, a catalogue of American writers, of the reigning Sovereigns of Europe, Foreign and American Obituaries, and a Chronicle of Events from July ‘38, to August ‘39. In short, it is a work of three hundred and thirty-four pages, which, judging from the table of Contents, we sincerely recommend to public patronage.

The Collegian.

We have received the 1st No. of the second volume of this work, which is conducted by the students of the University of Virginia, and under the immediate management of an editorial committee. We presume there can be no question about the utility of such publications at our seats of learning, when conducted with prudence and ability. Composition, as a prescribed academical or college exercise, is, we apprehend, too much neglected in our country, and we are the more surprised, because its tendency to invigorate the mind as well as to improve the style must be self-evident. In the absence, therefore of any fixed regulations on the subject, we are pleased to see the students voluntarily associate in a pursuit so laudable and instructive. It affords a delightful recreation in intervals of leisure—which might otherwise be unworthily employed—and, whilst it “developes, gives strength and polish to the understanding.”

Many of the articles in the No of the “Collegian” before us, would do credit to much older heads than those which we presume dictated them. The “Introduction” is written with taste and talent, and the article which follows, on “American Science and Literature,” contains some very just reflections and excellent sentiments, conveyed in an easy though somewhat exuberant style. The author of “Thomas Moore Hendrickson,” possesses a vein of sprightly humor, and manages his goose-quill adroitly; and, not much unlike him, is the writer of “Love at First Sight;” but it is questionable whether contributions like these, whilst they do very well to relieve pages of a graver aspect, ought to occupy too much space in the “Collegian.” We think the editor is rather too severe upon Capt. Marryatt’s work. Not that we are by any means apologists for the Captain, or admirers of any of his writings—but wholesale and unqualified condemnation is scarcely ever just, and even Marryatt’s malevolent and mendacious assaults upon our country, are occasionally redeemed by wholesome though unwelcome truths.

The *Olla Podrida*, which is served up at the end of the “Editors table,” though mixed up and cooked with some ingenuity, is not precisely to our taste. Some of the poetry, however, interspersed through the number, is excellent, and proves incontestibly that the other sections of the United States do not enjoy an exclusive monopoly in that kind of inspiration. Upon the whole, we cordially recommend the “Collegian” to public patronage, and especially to the support of every aspiring young Virginian.
